Comfortably fits the natural curves of your baby's face

Flexible medical-grade silicone soother

Soft and flexible, Philips Avent Soothie Heart soothers won't bump into baby's nose. One-piece design in medical-grade silicone.

Convenient design promotes stronger bond with baby

- Follows the curves of the face for baby's comfort
- Finger-held solution helps you bond with your baby
- Hygienic design doesn't trap water in the teat

Trusted by medical professionals

- One-piece design made from 100% medical-grade silicone
- Symmetrical, round teat
- Distributed by hospitals in the USA.**

Highlights

Follows the curves of the face

The special heart-shaped shield is designed to follow the natural curves of your baby's face to provide maximum comfort without bumping into their tiny nose.

100% medical-grade silicone

Durable one-piece design is made entirely from flexible medical-grade silicone. Our team of experts specially created it for newborns from 0-6 months.

Symmetrical, round teat

Soothie features a symmetrical, round teat, designed to fit the anatomy of baby's mouth and to help reduce pressure between the tongue and mouth. Philips Avent Soothie is independently accredited by the Oral Health Foundation.

Finger-held solution

Unique design lets you place your finger in the teat. This helps strengthen the bond with your baby by helping them suckle.

Distributed by hospitals

Trusted by medical professionals to calm newborns. The Philips Avent Soothie range is distributed in hospitals throughout the USA.

Hygienic design

Thanks to the finger-held design, cleaning is easy without drops of water getting trapped in the teat. (Don't worry: a soother clip can still be attached to the small hole in the front).
