

PHILIPS

AVENT

Anti-colic with
AirFree™ vent Gift set

Infant Starter Set

bottles with AirFree vent

SCD807

Designed to reduce colic, gas and reflux*

The AirFree™ vent is designed to help your baby swallow less air. The teat stays full of milk, even when horizontal, for upright feeding. Reducing the air a baby ingests can help ease common feeding issues like colic, gas and reflux.

Additional benefits

- Mix and match with other Philips Avent products
- Use your bottle with or without the AirFree™ vent
- Different teat flow rates available

AirFree vent designed for less air ingestion

- Teat stays full of milk, not air
- Locks milk in, keeps air out, for easy upright feeding

Clinically proven to reduce colic and fussing*

- Anti-colic system proven to reduce colic and fussing*
- Teat shape designed for a secure latch-on

Easy to assemble, use and clean!

- Simple to use
- Easy to clean & assemble, as AirFree™ vent is a single piece

Highlights

Locks milk in, keeps air out

The teat stays full of milk, even when the bottle is horizontal, so your baby can drink in a more natural, upright position. This can help reduce reflux, aid digestion and make feeding time more comfortable for you and your little one.

Designed for less air intake

Our unique AirFree™ vent draws air away from the teat so your baby swallows less air as they drink. This can help reduce common feeding issues such as colic, reflux and gas.

Reduces colic and fussing*

Clinical studies have shown that the Philips Avent bottle reduces colic and fussing*. How? A valve in the teat prevents vacuum build-up as

your baby drinks, allowing uninterrupted feeding. This can help reduce colic, gas, spit-up and burping.

Easy to clean and assemble

The AirFree™ vent can be easily assembled with any Philips Avent Anti-colic and Classic+ bottle. Cleaning is also a breeze, as the bottle has a wide neck and there are only a few parts to clean.

Designed for a secure latch

The shape of the teat allows for a secure latch-on, and the ribbed texture helps prevent teat collapse, for uninterrupted, comfortable feeding.

Simple to use

To start, fill the bottle with milk, place the AirFree™ vent over the rim, and screw on the teat. Tilt the bottle downwards once to fill the teat, and you're ready to go. When feeding, make sure that the AirFree™ vent stays on top. The teat will stay full of milk, even when it's horizontal, for easier upright feeding.

Freedom of choice

You can use your Philips Avent Anti-colic bottle with or without the AirFree™ vent. The AirFree™ vent is compatible with our 125 ml (4 oz), 260 ml (9 oz) and 330 ml (11 oz) Philips Avent Anti-colic and Classic+ bottles.

Choosing the right teat

As your baby grows, their needs change when it comes to drinking. Choose a teat with a flow rate that's right for their development. The Philips Avent Anti-colic and Classic+ bottles can be used with or without the AirFree™ vent — but they should only be used with Philips Avent Anti-colic and Classic+ teats.

Mix and match

Compatible range from breastfeeding to cup. We designed our bottle range so it's easy to mix and match tops and bottoms. This way you can progress easily from bottle, to training cup, to sippy cup, with fewer parts.

Specifications

What is included

4 oz Blue baby bottles: 2 pcs

9 oz Blue baby bottle: 2 pcs

AirFree™ vent: 1 pcs

Bottle and teat brush: 1 pcs

Orthodontic soother: 1 pcs

Functions

Teat: Easy latch on, ribbed texture prevents teat collapse, clinically proven anti-colic system*

Compatibility: Full Anti-colic and Classic+ bottle compatibility

* The AirFree™ vent is designed to help your baby swallow less air. The teat stays full of milk, even when horizontal, for upright feeding. Reducing the air a baby ingests can help ease common feeding issues like colic, gas and reflux.

* At 2 weeks of age, babies fed with a Philips Avent bottle tended to develop less colic compared to conventional bottle feeding and a significant reduction in fussing at night compared to babies fed with another leading bottle.

* What is colic and how does it affect babies? Colic is caused in part by swallowing air while feeding, which creates discomfort in a baby's digestive system. Symptoms include crying, fussing, gassiness and spit-up.
