Highlights

Warms in 3 minutes*

Time for a feed? Hospital-standard water-bath warming better preserves milk nutrients without compromising on efficiency. Whether you or another caregiver are feeding the baby, the best warming technology ensures that it's all ready in 3 minutes.*

Eradicates 99.9% of bacteria

When it's time to clean up, use the power of natural steam to eradicate 99.9% of bacteria. Steam, known for its ability to reach into nooks and crevices, is perfect for sterilising every corner of your baby's bottle, soother and small toys. And it's all chemical-free.

Better preserves milk proteins

Warm milk the way nurses do in hospitals using water-bath warming. Compared to other methods, it better preserves milk proteins essential for building up a baby's immune system. Gentle and quick, our technology helps promote your baby's healthy development with every feed.

Prevents hotspots

Our warming technology protects the proteins that promote your baby's healthy development by circulating heat evenly and constantly. Thanks to water-bath warming, there's no need to worry about hotspots that can cause milk to spoil. Instead, your baby can enjoy evenly warmed, nutrient-rich feeds every time.

Prevents hotspots

Whatever the milk's starting temperature is, our smart sensor takes care of the details for you. It adjusts the warming time automatically by detecting the milk's starting temperature. No guesswork. And no risk of overheating.

Auto shut-off and stays warm

No second-guessing yourself. Make day and night feeds easier and safer knowing that the device automatically shuts off once it's done, and keeps the bottle at feeding temperature for up to 60 minutes.

One button controls everything

Whether it's your first time at warming, or you're a feed prep expert, our one-button interface makes it simple for any caregiver to warm and sterilise. You'll receive visual and audio alerts throughout each process before it automatically shuts off.

See-through window

Our new see-through window makes feed prep intuitive for everyone. Use it to quickly check the water level before warming cycles and get it right every time. No guessing. Everything you need to know is right there in front of you.

Clever, space-saving design

Keep your home clutter-free with one multi-functional tool that takes up minimal counterspace. The small yet mighty design allows you to sterilise a bottle as well as small toys and soothers in one go.

Easy to clean

Our beautifully simple design makes cleaning just as easy as warming and sterilising. Wipe the warmer and steriliser down with a cloth, using the wide-neck basin to easily reach in. The steriliser attachment can also be placed in the dishwasher if needed.

Compatible with most brands

As your little one grows, know that our warmer works with all kinds of baby bottle brands, as well as different bottle materials and sizes. And when they're ready to graduate, our warmer works with food jars too.

Get the most out of essentials

Our steam sterilisation technology is the safest way to sanitise your baby's items. It's effective on germs while still respecting all kinds of materials, which prolongs an item's lifespan. Using the sterilisation attachment for small items, it's easy to sterilise bottles, soothers, spare parts and small toys all in one go.

Specifications

Product Material

Product Material: Plastic (PP and ABS)

Technical specifications

Power consumption: 400 W

Voltage (S_0000156): 220-240 V ~ 50-60 Hz, 120-127 V ~ 50-60 Hz (US, Canada, Mexico)

Weight and dimensions

Weight: 1500 g

Product dimensions (W x H x D):

260.4 x 150 x 210.5 mm

Country of origin

Produced in: China

What is included

2-in-1 Warmer and Steriliser: 1 pcs
