Highlights

UltraClear 5K UHD Resolution

14.7 million pixels for precise detail and clarity. With 5K Ultra HD resolution, four times Quad HD, you see detail like you've never seen before for perfect results.

DisplayHDR 600

VESA-certified DisplayHDR 600 delivers a dramatically different visual experience. Unlike other "HDR-compatible" screens, true DisplayHDR 600 produces astonishing brightness, contrast and colours. With the help of local dimming and high peak brightness up to 600 nits, images come to life with notable highlights featuring deeper, more nuanced blacks. It renders a fuller palette of rich new colours, delivering a visual experience that engages your senses.
Calman Ready

This new technology allows for screen calibration to be done at a fraction of the traditional time it takes, without skimping on a beautiful and aesthetically pleasing colour gamut. In contrast to manual calibration, monitors equipped with the Calman Ready feature will calibrate automatically. In turn, this automation produces

vibrant colours that produce so-called "Hollywood-grade colour" and is most suited for professions that demand accurate colouring.

1.07 billion colours

This display delivers outstanding colour depth with 1.07 billion colours and the finest gradation for recreating smooth, precise and vivid images. Enjoy accurate and true-to-life visuals whether gaming, watching videos or working on colour-critical work with graphics applications.

Thunderbolt™ 4 monitor

This Philips docking monitor is equipped with Thunderbolt™ 4 connection. Compared with conventional USB-C monitors, Thunderbolt™ 4 technology provides lightning-fast 40 Gbps data transfer speeds, supports high resolution video, offers multi-stream transport for daisy chaining, has up to 96 W of power delivery to external devices and can provide a stable 1 Gbit/s Ethernet connection.

Thunderbolt daisy chain setup

Daisy chaining allows you to drive multiple monitors and devices from a single Thunderbolt port on your laptop. From the Thunderbolt port of your laptop, connect to this monitor, then
from the second Thunderbolt port on this monitor you can connect to a second 4K monitor.
Pro-level colour accuracy

This monitor is equipped to deliver vibrant, true-to-life colours with wide Display-P3 support, which is ideal for Apple users. Adobe RGB ensures precise colour for professional photo and print work, while sRGB offers consistent, reliable colour for web and everyday use. Perfect for creatives who demand accuracy.

MultiView technology

With the ultra-high resolution Philips MultiView display, you can now experience a world of connectivity. MultiView enables active dual connect and view so that you can work with multiple devices like a PC and notebook simultaneously, for complex multitasking.

SmartKVM

Unlike traditional built-in KVM monitor buttons, the smart KVM allows for switching between sources with the click of a button on your keyboard. When all devices are properly connected, users can easily switch between sources by clicking the "Ctrl" key three times.

Highlights

Built-in stereo speakers

A pair of high-quality stereo speakers built into a display device. They may be visible front firing, or invisible down firing, top firing, rear firing etc. depending on model and design.
AI-enhanced Webcam Autoframing

This AI-enhanced feature is perfect for multi-person video conferencing. When one or more people join the webcam view, the AI-powered feature will automatically adjust and zoom to fit all team members in the frame. Likewise, when participants leave the webcam view, the AI-enhanced webcam will adjust accordingly, thereby making it ideal for long meetings as well as team calls.
PowerSensor 2

This monitor's PowerSensor 2 feature reduces energy consumption by detecting when users move closer and further away from the screen. After switching the OSD setting to "User", you then need to adjust the settings in Windows 11 for this feature to function properly. When these adjustments are made, the monitor and connected PC/laptop will wake when someone approaches it and sleep when someone walks away, effectively reducing the amount of wake time. The distance for detection can be set to 50, 75 or 120 cm from the user's laptop. Please note that Windows 11 must be installed.

TUV Rheinland Eyesafe - RPF® 40

Philips display meets the TUV Rheinland Eyesafe® standard to truly protect you from long exposure to blue light. The always-on blue light filter not only helps reduce digital eye strain, but also guarantees colour integrity.
