Highlights

Long lasting hair reduction

Lumea IPL uses unique warm, gentle SmartPulse light technology to put hair to rest, preventing it from growing back for long-lasting smooth skin. It only takes you 3 treatments to achieve up to 90% hair reduction on lower legs****. You can enjoy salon like hair removal adapted for safe and gentle use in the comfort of your home.

SenselQ technology

Our SenselQ technology is here for a personalized hair removal treatment. The skin contact sensor ensures you have skin contact, avoids flashing in the eyes and making sure you do not need goggles. The SmartSkin sensor suggests right intensity for gentle use for comfort in every flash.

2 unique attachments

Unique curved attachments ensures optimal skin contact for gentle treatment. The body attachment is curved for treating large areas like legs. It also enables faster treatment with our largest window. The face filter is designed for extra care for gentle use on delicate facial skin*****

Treatment schedule

Treat every two weeks for the first four treatments, then save time by touching-up once a month. That's it, it takes only 11 minutes to cover both lower legs*****.

For a range of skin tones

IPL requires contrast between the pigments in the hair color and the skin tone and therefore works on naturally dark blonde, brown and black hair and on skin tones from fair to medium brown. Check the chart to see if it's suitable for you. Choose from five light intensity settings to tailor your treatment so it's most comfortable for you.

Philips Lumea IPL app

The free Lumea IPL app makes it easier than ever to achieve results through step-by-step guidance and smart scheduling to keep track of your treatments.
