Items in **blue** are compatible, but no longer available for purchase from the manufacturer.

*Devices not included in the preceding table have not undergone compatibility testing with Lumify. Philips cannot guarantee Lumify system performance with non-compatible devices as compatibility testing with all devices on the market is not feasible. The devices have been evaluated using the operating system (OS) versions they were originally equipped with.

Subsequent OS releases, known as maintenance releases, that are higher than the version installed at the time of device launch have not been explicitly verified. Conducting explicit tests for newer major OS releases on older devices, which were initially equipped with a previous OS version, is not feasible. Lumify system functionality and performance may be impacted if significant operating system changes have been applied.

Please note that Reacts tele-ultrasound solution is not available on Lumify when using the above iOS devices. All iOS devices currently compatible require use of Lumify Power Module and utilize USB-C transducer cables and will continuously scan for 2 to 2.5 hrs.

Devices on the supported list satisfy the following criteria: 1. Passed Philips hardware testing, 2. Is readily available from the device manufacturer.

Philips cannot test every device available on the market, so this list represents a range of devices to satisfy a variety of user needs with respect to form factor, price, battery life and connectivity options.
