HealthSuite Imaging

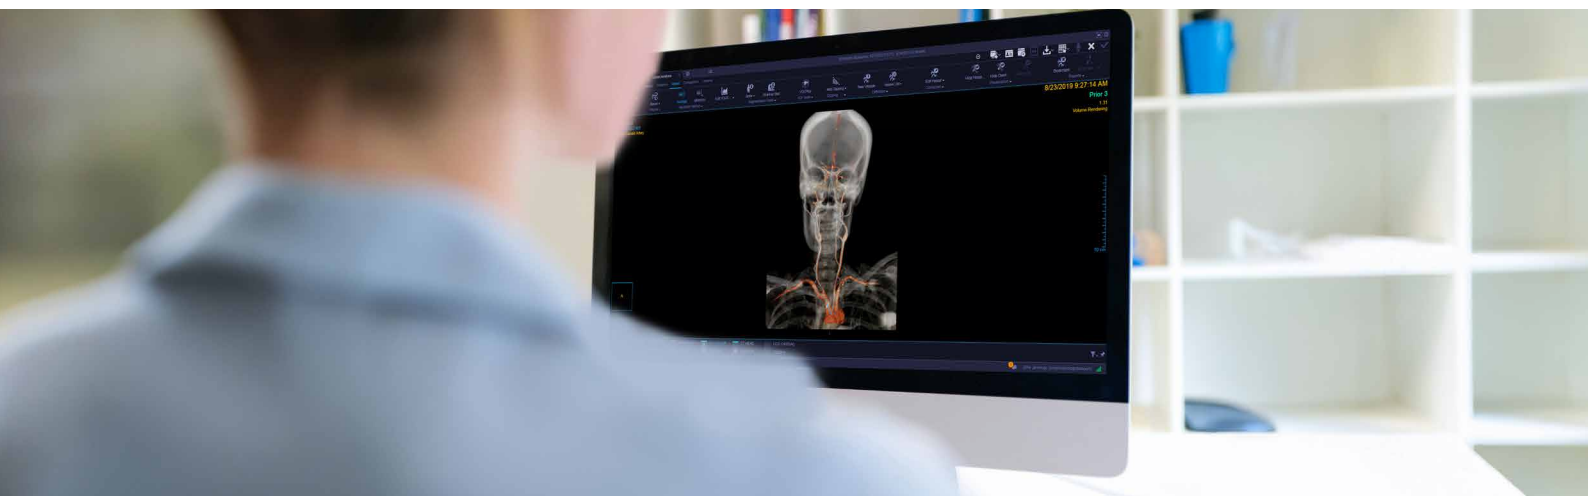

Enterprise Imaging and Workflow
Management, anywhere - securely

Introducing a paradigm shift in medical imaging

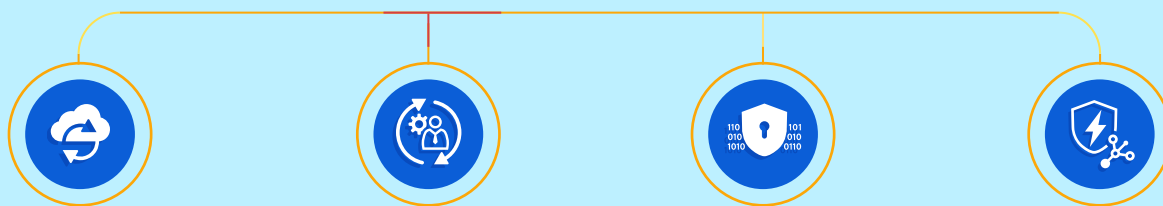

Enterprise Imaging and Workflow Management – **at your fingertips**

On their care delivery mission, the Radiology personnel, independently from their role, all need fast and secure access to relevant information and images and to specific tool-sets. But the cost barriers and the complexity of owning and maintaining healthcare information systems can hinder this access and compromise the quality of care.

HealthSuite Imaging¹, the Philips radiology informatics software as a service (SaaS), is a liberating force in medical imaging IT. Leveraging public cloud, it releases healthcare organizations from technological, geographic and economic constraints by providing on-demand access to diagnostic imaging and workflow management services.

Experience the benefits of HealthSuite Imaging

End-to-end Radiology workflow — remote

Build a virtual community of healthcare professionals to enhance patient care. Schedule, document, monitor, read, report, and collaborate without compromising security, efficiency, or quality.

Software as a Service and Scalability

Relieve your IT department from the challenging radiology system infrastructure management responsibilities. Scale up or down and add services any time. Pay as you go.

Business Continuity and Security

Protect your mission-critical imaging department activity with highly-available services. Your imaging data and systems are protected in the cloud with high security.

Innovation and future-ready

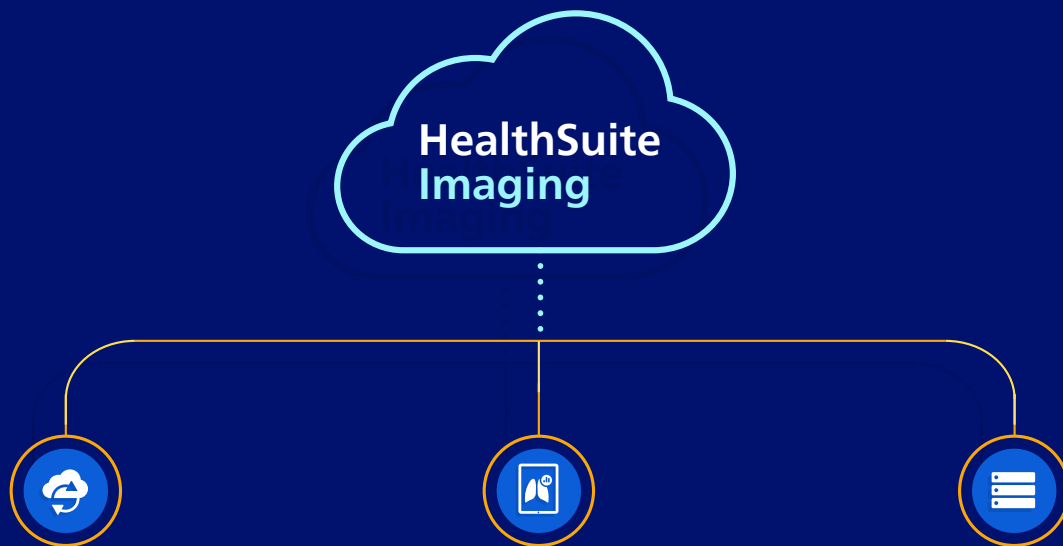

Enjoy always up-to-date applications and benefit from the latest features. Open the door to innovative areas, such as genAI, underpinned by the broad portfolio of AWS cloud services.

Greater freedom for patient-centered care

Philips HealthSuite Imaging delivers on-demand radiology services on a pay-as-you-go basis. It frees healthcare institutions from cumbersome IT infrastructure management, allowing increased focus on what matters most: patient care.

All-in-one

HealthSuite Imaging provides all-encompassing radiology services.

Workflow Information Management

Orchestrate all the steps of your medical imaging workflow even remotely. Engage with your patients.

HealthSuite Imaging delivers Workflow Information management² services, an end-to-end solution to radiology management handling workflows from patient scheduling to report distribution, including apps like the Patient Assistant for self-scheduling and the Patient Kiosk for self-admission. The intuitive modular and scalable workflow information management services contribute not only to efficient radiology operations but also to high standard of patient care.

Radiology workspace

Reading and reporting capabilities that help clinicians get to a fast and precise data interpretation.

The Cloud Radiology Workspace enables radiologists and physicians to securely access and share medical images from anywhere, as long as an Internet connection is available. Organizing in a single workspace all the relevant information and clinical tools needed for a confident reading in a coherent workflow, this web-enabled platform is designed with reading workflow agility in mind, without compromising quality.

Clinical repository

Remote, secure storage that serves as an archive or your primary reading solution.

The HealthSuite Imaging standards-based clinical repository enables ingesting, storing, managing and sharing multi-ology medical images and related patient data with the security of the cloud. The vendor-neutral repository seamlessly integrates with other healthcare systems and applications, on-premises or in the cloud. Clinicians can collaborate through chat and screen-sharing, allowing them to easily access and share medical images across departments and facilities. Patients can also access their results and share those results with other providers – improving the patient experience.

A solid collaboration for your peace of mind

For more than two decades, Philips has delivered radiology informatics solutions to healthcare organizations around the world. Partnering with Amazon Web Services (AWS) represents a leap forward for healthcare leaders and providers to reap the benefits of Philips' deep clinical experience embedded in its informatics solutions enhanced by the secure, trusted, and scalable infrastructure from Amazon Web Services (AWS).

AWS brings extensive expertise in secure data handling and has been a leader in healthcare cloud services since 2006, supporting millions of customers. With proven high uptime rates for mission-critical systems and support for 143 security standards³ and compliance certifications, AWS ensures that Philips HealthSuite Imaging can meet global regulatory requirements. Their advanced cybersecurity measures, including AWS WAF, secured networks, encryption at rest, and comprehensive security scans, further enhance data protection and durability.

With AWS' broad experience with cloud services for healthcare organizations worldwide, Philips HealthSuite Imaging supports your mission to deliver high-quality care while easing the burden on clinicians and staff and ensuring security and privacy.

With HealthSuite Imaging cloud-based infrastructure, shift your IT focus from managing infrastructure to driving innovation and value for your institution:

- Handover the complete infrastructure management to Philips, including monitoring, maintenance, patching, update and upgrade.
- Scale up and down effortlessly, add new services with no downtime and related user and patient impact.
- Own and stay in control of your data and receive proactive usage, activity, and status reports.
- Reduce capital investment and long term total cost of ownership with predictable, pay-as-you-go operating costs.
- Reduce your security risk profile thanks to a system always up-to-date and the cloud technology powered by AWS, monitored and attended 24/7.
- Trust that your data is protected and available when and where your Radiology staff needs it, including from home.
- Expect secure data migration to the cloud, thanks to dedicated, experienced migration consultants.
