

PHILIPS

Water Dispenser

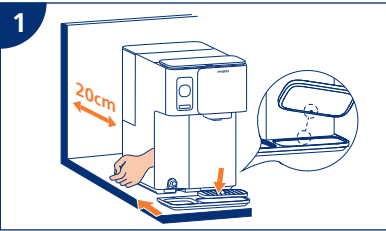

Quick Start Guide

USER MANUAL

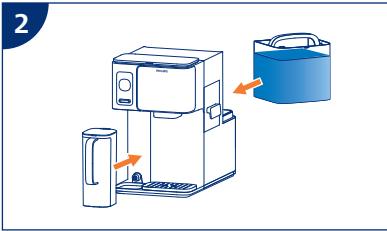

Setup & Installation

1

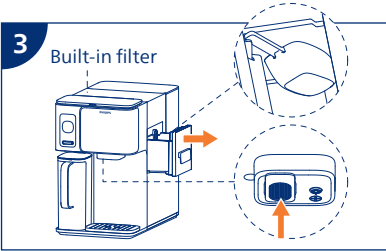

Leave at least 20cm of space behind the unit for ventilation.
Install the base and the drip tray.

2

① Place the tap water tank firmly into position against the back panel.
② Insert the filtered water jug straight down until it clicks into place.

3

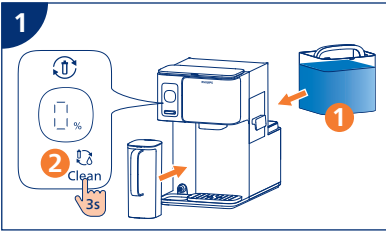

Built-in filter
① Confirm the filter is pre-installed.
② Open the ice box and ensure the ice scoop is inside.
③ Check that the spout cover is properly attached.

New Filter Flushing

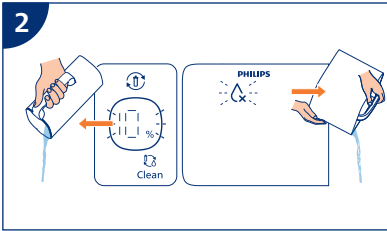

The flushing function cleans the unit's waterway, filter, cooling tank in approximately 1 hour.
If the unit hasn't been used for over 3 days, run this function to maintain water quality and taste.

1

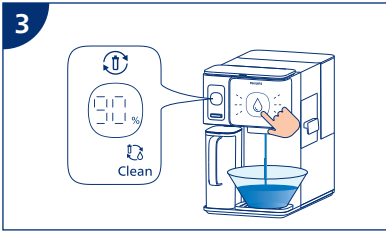

① Empty filtered water jug. Fill the tap water tank to the "Max" line.
② Press and hold the "Clean" icon for 3 seconds until the "Clean" icon lights up to begin flushing.

2

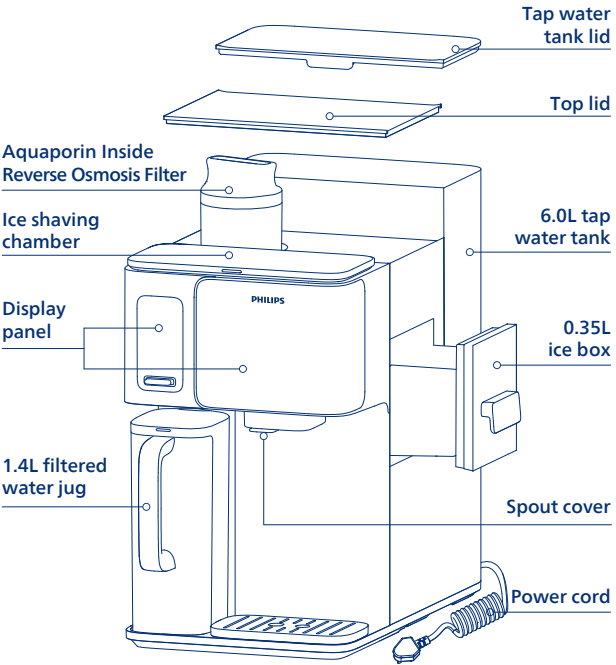

At 0-80% (while the "%" icon blinks), empty the filtered water jug and place it back. (Repeat this 8 times.)
When "Clean" blinks, empty the tap water tank and refill it with tap water to the "Max" line.

3

At 90%, place a large container under the spout. Press the "Dispense" icon to dispense water until the process reaches 100%. (Press the "Dispense" icon again to pause if needed.)

Product Overview

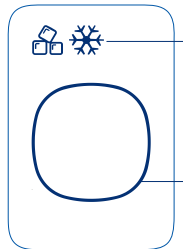

Status Light Instructions

Status	Meaning
Solid white light	UV sterilization in progress.
Solid white light	Filtration in progress.
Blinking white light	Low filtered water level, please try to dispense water later.
