

Enhance your Cardiovascular IT solution

by upgrading to the latest Philips Cardiovascular Workspace¹ version

Philips Cardiovascular Workspace 9.2

Our new clinical features

Access powerful Nuclear Medicine Reporting² from Cardiovascular Workspace, without extra installations or IT complexity. Deliver accurate insights throughout the Nuclear Medicine workflow with an intuitive experience that supports confident clinical decisions.

Extending AI for routine and structural heart echo exams with Ultrasound Workspace render engine, 3D Auto Color Flow Quantification, 3D Auto Tricuspid Valve Quantification and 2D Auto Left Ventricle evaluation with Auto Segmental Wall Motion Scoring.

Epic*-driven departments can now complete vascular ultrasound reports directly within Philips Cardiovascular Workspace and streamline the clinical workflow.

Relabel measurements in the Echo Module with ease, to reduce the number of clicks and adjust made measurement labels when needed.

Flexibility to choose how your department wants to group finding codes in the conclusion and summary statements, for improved report readability.

Clinical benefits

Provides a single point of access to images and information anytime and virtually anywhere.³ Perform comprehensive analysis, quantification and reporting for fast, informed clinical decision making.

Operational benefits

Provides interoperable access to a variety of systems and applications from a single location, allowing you to analyze data to streamline efficiency.

Financial benefits

Decreases deployment costs and time while interfacing to existing systems through zero-footprint technology.
