

Quality care shouldn't have a zip code

Delivering essential care to rural America

Everyone deserves access to quality care – no matter where they live. As a global leader in health technology, we're helping healthcare providers reimagine what's possible through innovation that connects people, places and possibilities.

From medical imaging and patient monitoring to telehealth and enterprise informatics, our smart, integrated solutions empower care teams to do more. This means less time on administration and more time where it counts: with patients.

Empowering professionals

Connecting communities

Improving lives

Partner with Philips to maximize RHT Program funding

The Rural Health Transformation (RHT) Program presents a pivotal opportunity to improve healthcare access, quality and sustainability in rural communities. Our innovative solutions directly align with RHT Program priorities, empowering you to build a connected, resilient and high-performing rural health ecosystem.

Enterprise virtual health

Maternal care

Mobile imaging

Patient monitoring

Connecting care teams everywhere

Extend the expertise of your specialists beyond city limits, connecting rural hospitals to each other and to larger health systems.

- **Philips eICU program:** Provides 24/7 remote critical care support to rural ICUs, improving outcomes and helping hospitals support more patients locally.
- **Tele-ultrasound:** Connects remote specialists with rural clinics for real-time, guided examinations, improving maternal health and early diagnostics.
- **Healthcare Information Exchange (HIE):** Enables seamless, statewide access to medical images, reducing duplicate scans and improving care coordination.
- **Digital pathology & Radiology Operations Command Center (ROCC):** Centralize expertise to support rural sites with faster diagnoses and optimized imaging operations.

Mobile imaging

Diagnostics on the move

Bring advanced diagnostic capabilities directly to rural communities.

- **Mobile CT, MR and DXR solutions:** Flexible, high-quality imaging that can be deployed where it's needed most, reducing travel burdens for patients.
- **Point-of-care ultrasound (Lumify and Compact):** Brings high-quality diagnostic imaging to any rural clinic or patient bedside.

Maternal care

Supporting mothers and babies at every stage

Deliver comprehensive care from conception through postpartum, no matter the distance.

- **Pregnancy+ app:** Connects expectant mothers with vital state resources, personalized education and health tracking.
- **Remote perinatal monitoring:** Allows clinicians to monitor high-risk pregnancies from a distance, enabling early intervention.

Patient monitoring

A watchful eye, anywhere

Strengthen patient safety and manage more patients with fewer staff.

- **Centralized monitoring units (CMU):** Allow a single team to monitor patients and coordinate care with on-site providers across multiple rural facilities, using predictive analytics to flag deterioration earlier.
- **Remote patient monitoring (RPM):** Helps patients manage cardiac conditions from home, providing clinicians with data to guide timely interventions.
- **Hospital patient monitors:** End-to-end patient monitoring portfolio from bedside, transport and vital signs monitors to central monitoring systems and mobile apps creating a real-time view of the patient using live, streaming device data.

Let's reimagine rural healthcare, together.

Your state is poised to make a significant impact with RHT Program funding. Partner with Philips to design and deploy technology-driven solutions that create lasting change for your rural communities.
