1. DICOM Conformance Statement Overview

Xcelera is the Philips Cardiology multi-modality image and information management solution that allows images, information and reports to be reviewed, stored and distributed throughout the cardiology department and beyond. Xcelera is intended to: a) Review the high quality medical study data provided by modalities, and b) Serve as a permanent archive for such data. As such, the Xcelera system consists of a central image and database server and several connected viewer workspots capable of running various viewer applications (also called review station). The Xcelera is designed with the concerns for the system as: data integrity, performance, image quality, serviceability, and large number of users. Added with ease of use, privacy/confidentiality, flexibility and expandability. Data is imported from the image acquisition system through a vendor provided DICOM port. This port is provided as a safe and reliable way to access the clinical data. In addition to DICOM, Xcelera also maintains compatibility with the installed base of Philips Sonos US image acquisition system in supporting the proprietary DSR-TIFF format. The system also offers DICOM ports such that external systems (viewers, other PACS systems and etc) can access the data. Data can also be imported from and exported to CD or DVD. The primary point of user contact with the system is the viewer workspot, consisting of several clinical tools, e.g. for Cath, Echo, CT and MR, including 3-rd party tools like QLAB. These programs use the common Windows GUI metaphors for selecting items or entering information in the common patient and study search window. A network based on standard technology, connects the Xcelera server, the viewer workspots and external DICOM nodes, such as Cath labs, Ultrasound labs, EP labs and other acquisition systems, DICOM archives, DICOM viewers etc.

3.2. Audience

This Conformance Statement is intended for:
- (Potential) customers
- System integrators of medical equipment
- Marketing staff interested in system functionality
- Software designers implementing DICOM interfaces

It is assumed that the reader is familiar with the DICOM standard.

3.3. Remarks

The DICOM Conformance Statement is contained in chapter 4 through 8 and follows the contents and structuring requirements of DICOM PS 3.2.
This DICOM Conformance Statement by itself does not guarantee successful interoperability of Philips equipment with non-Philips equipment. The user (or user's agent) should be aware of the following issues:

- **Interoperability**
  Interoperability refers to the ability of application functions, distributed over two or more systems, to work successfully together. The integration of medical devices into an IT environment may require application functions that are not specified within the scope of DICOM. Consequently, using only the information provided by this Conformance Statement does not guarantee interoperability of Philips equipment with non-Philips equipment.
  It is the user's responsibility to analyze thoroughly the application requirements and to specify a solution that integrates Philips equipment with non-Philips equipment.

- **Validation**
  Philips equipment has been carefully tested to assure that the actual implementation of the DICOM interface corresponds with this Conformance Statement.
  Where Philips equipment is linked to non-Philips equipment, the first step is to compare the relevant Conformance Statements. If the Conformance Statements indicate that successful information exchange should be possible, additional validation tests will be necessary to ensure the functionality, performance, accuracy and stability of image and image related data. It is the responsibility of the user (or user's agent) to specify the appropriate test suite and to carry out the additional validation tests.

- **New versions of the DICOM Standard**
  The DICOM Standard will evolve in future to meet the user's growing requirements and to incorporate new features and technologies. Philips is actively involved in this evolution and plans to adapt its equipment to future versions of the DICOM Standard. In order to do so, Philips reserves the right to make changes to its products or to discontinue its delivery. The user should ensure that any non-Philips provider linking to Philips equipment also adapts to future versions of the DICOM Standard. If not, the incorporation of DICOM enhancements into Philips equipment may lead to loss of connectivity (in case of networking) and incompatibility (in case of media).

4. Networking

This section contains the networking related services (vs. the media related ones).

4.1. Implementation model

The implementation model consists of three sections:
- The application data flow diagram, specifying the relationship between the Application Entities and the "external world" or Real-World Activities,
- A functional description of each Application Entity, and
- The sequencing constraints among them.

4.1.1. Application Data Flow Xcelera

As part of the implementation model, an application data flow diagram is included. This diagram represents all of the Application Entities present in an implementation, and graphically depicts the relationship of the AE's use of DICOM to Real-World Activities as well as any applicable user interaction.
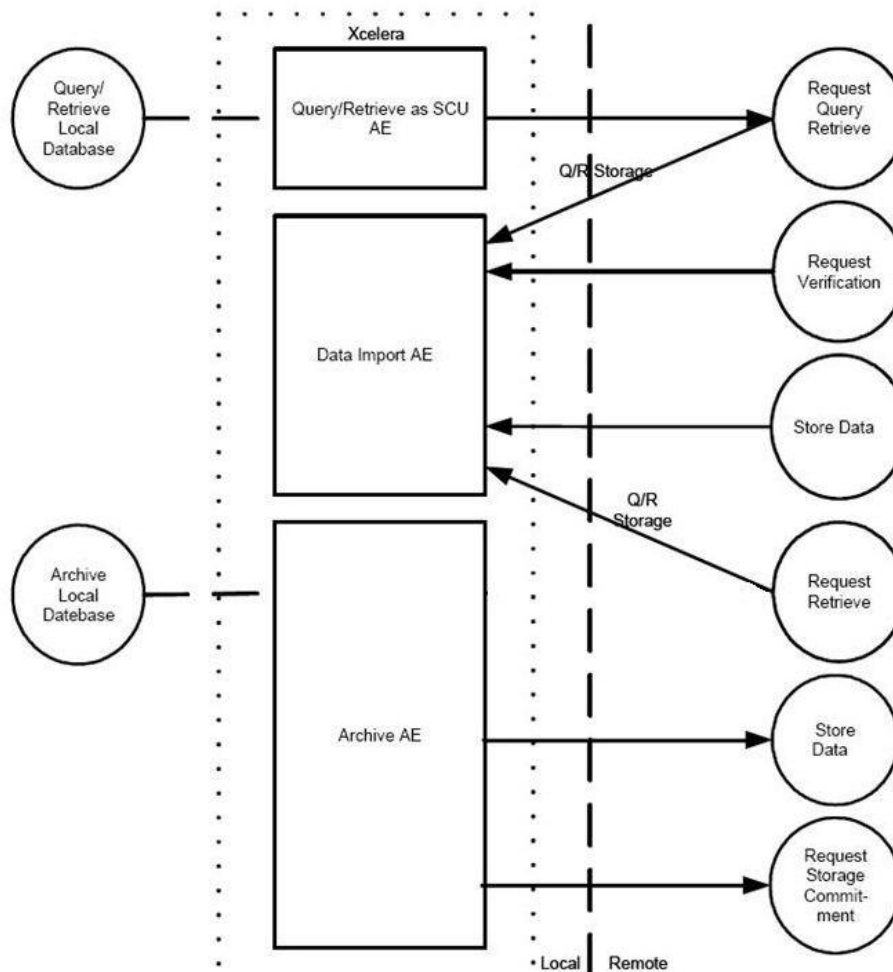

Figure 1: Application Data Flow Diagram (1)
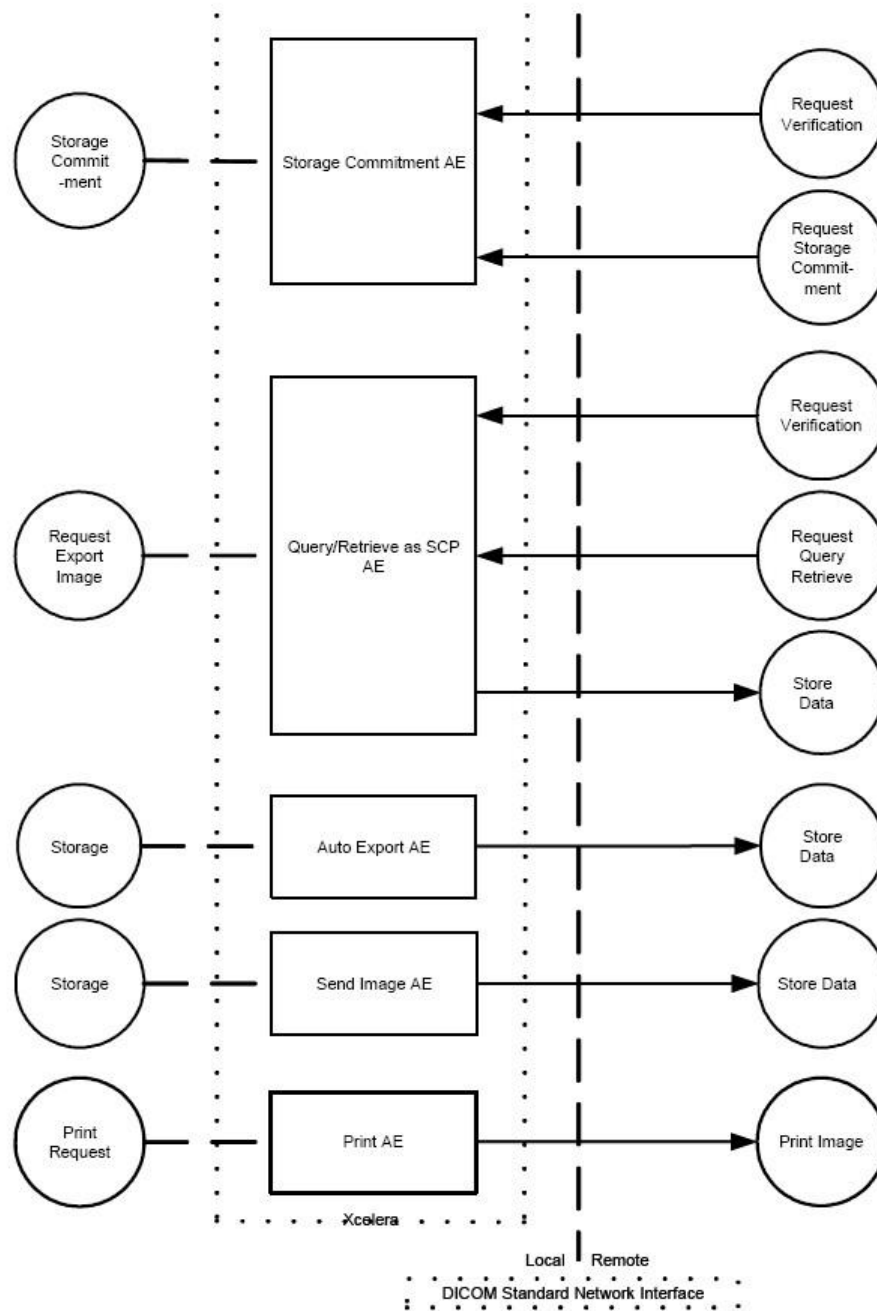

Figure 2: Application Data Flow Diagram (2)

4.1.2. Functional Definition of AE's

This section contains a functional definition for each individual local Application Entity.

4.1.2.1.   Functional Definition of Archive AE

The Archive AE handles the communication between Xcelera and the DICOM Archive. For storing instances to an archive, an automatic function, Storage with Storage Commitment will be used. To pull the instance from an archive, a C-MOVE with Study Instance UID handles this action. The study/instance will be retrieved via the Import AE.

4.1.2.2.   Functional Definition of Auto Export AE

Xcelera (SCU) automatically initiates an association with a remote DICOM AE (SCP) to send a storage request and the applicable instance data. (DICOM Storage Service Class)
This Auto export behavior of Xcelera, when configured, happens for all imported studies. It is also possible to auto export only studies from an import AE-Title.

4.1.2.3.   Functional Definition of Image Import AE

Xcelera (SCP) accepts an association with a remote DICOM AE (SCU) to receive a storage request and the applicable instance data. (DICOM Storage Service Class)

4.1.2.4.   Functional Definition of Print AE

The Print AE in Xcelera supports the functionality for basic grayscale print management, basic annotation box, and print job. On demand, Xcelera (SCU) initiates an association with a printer (SCP) and sends a create requests to the printer (DICOM Print Management SOP class).

4.1.2.5.   Functional Definition of Query Retrieve as SCP AE

Xcelera Query/Retrieve as SCP AE consists of two functions. Xcelera (SCP) accepts an association from a remote DICOM AE (SCU) to receive a Query/Retrieve request. (DICOM Query/Retrieve Service Class). - When a retrieve of an instance is requested, Xcelera sends that requested instance through Store SCU AE (DICOM Storage Service Class)

4.1.2.6.   Functional Definition of Query Retrieve as SCU AE

Xcelera (SCU) initiates an association on event, initiated by the user, with a remote DICOM AE (SCP) to send a Query/Retrieve request (DICOM Storage Service Class).

4.1.2.7.   Functional Definition of Send AE

When the Send function in Xcelera is addressed, Xcelera (SCU) initiates an association on event, initiated by the user, with a remote DICOM AE (SCP) to send a storage request and the applicable instance data. (DICOM Storage Service Class)

4.1.2.8.   Functional Definition of Storage Commitment AE

Xcelera (SCP) accepts an association from a remote DICOM AE (SCU) to receive a storage commitment request. After handling the requested storage commitment, Xcelera initiates an association with the SCU to report the status of the storage commitment (DICOM Storage Commitment Service Class)

4.1.3.   Sequencing of Real World Activities

All Real-World Activities as specified in the Functional Definition of Application Entities may occur independently from each other. IntelliBridge does not require any specific sequence of activities.
Modalities are setup in such a way that the requests for MWLM updates are issued at regular intervals. Moreover, the user may press a button on the modality console to refresh the modality worklist instantaneously.
Regarding the MPPS service, the modality has to comply with the normal sequence as defined in the DICOM standard. An MPPS-Created message should be followed by an MPPS-In Progress and/or a MPPS-Completed/Discontinued message type.

4.2. AE Specifications

This section in the DICOM Conformance Statement is a set of Application Entity specifications. There are as many of these subsections as there are different AE's in the implementation.

4.2.1. Archive AE

Detail of this specific Application Entity is specified in this section.

4.2.1.1. SOP Classes

Archive AE is used for archiving the patient studies either in Xcelera Server (Xcelera DICOM Archive) or in external DICOM Archive. Archive AE is intended to do the functioning of storing the patient studies in the DICOM Archive, Sending the Storage Commitment to the DICOM Archive and Retrieving studies from the DICOM Archive whenever they are needed. These functions are undertaken automatically.

Archive AE, for its functioning, makes use of following DICOM functions:

- Verification as SCU, which uses C-ECHO service element.
- Image Storage as SCU, which uses C-STORE as service element.
- Storage Commitment as SCU, which uses N-ACTION, N-EVENT-REPORT service elements.
- Retrieve as SCU, which uses C-MOVE as service element.
- Patient / Study are always updates with the latest information in the DICOM Archive. (Refer to the tables in section 4.2.1.3.3.3 for the list of updated patient and study attributes.)

Separate Application Entities need to be configured for Storage, Storage Commitment and Fetch (Retrieve) functionalities.

These DICOM functionalities are described here.

This Application Entity provides Standard Conformance to the following SOP Classes.

4.2.1.2.   Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.1.2.1.   General

The DICOM standard application context is specified below.

Table 6: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.1.2.2.   Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

Table 7: Number of associations as an Association Initiator for this AE

Description	Value
Maximum number of simultaneous associations	1

4.2.1.2.3.   Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

Table 8: Asynchronous nature as an Association Initiator for this AE

Description	Value
Maximum number of outstanding asynchronous transactions	Unlimited

4.2.1.2.4.   Implementation Identifying Information

The value supplied for Implementation Class UID and version name are documented here.

4.2.1.3.1. (Real-World) Activity – Verification as SCU

4.2.1.3.1.1. Description and Sequencing of Activities

The Archive AE sends associations to systems to verify application level communication using the C-ECHO command.
Figure 3: (Real World) Activity - Verification as SCU

4.2.1.3.1.2. Proposed Presentation Contexts

The Archive AE proposes the following presentation contexts to the remote AE during the association request before sending the C-ECHO.

Table 13: Proposed Presentation Contexts for (Real-World) Activity – Verification as SCU

4.2.1.3.1.3. SOP Specific Conformance for Verification SOP Class

The Archive AE provides standard conformance to Verification SOP Class.

4.2.1.3.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 14: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation	the SCU has successfully send C-ECHO
Other than success	<>0000	Problems with sending the C-ECHO	Reason is logged

4.2.1.3.2. (Real-World) Activity – MOVE as SCU

4.2.1.3.2.1. Description and Sequencing of Activities
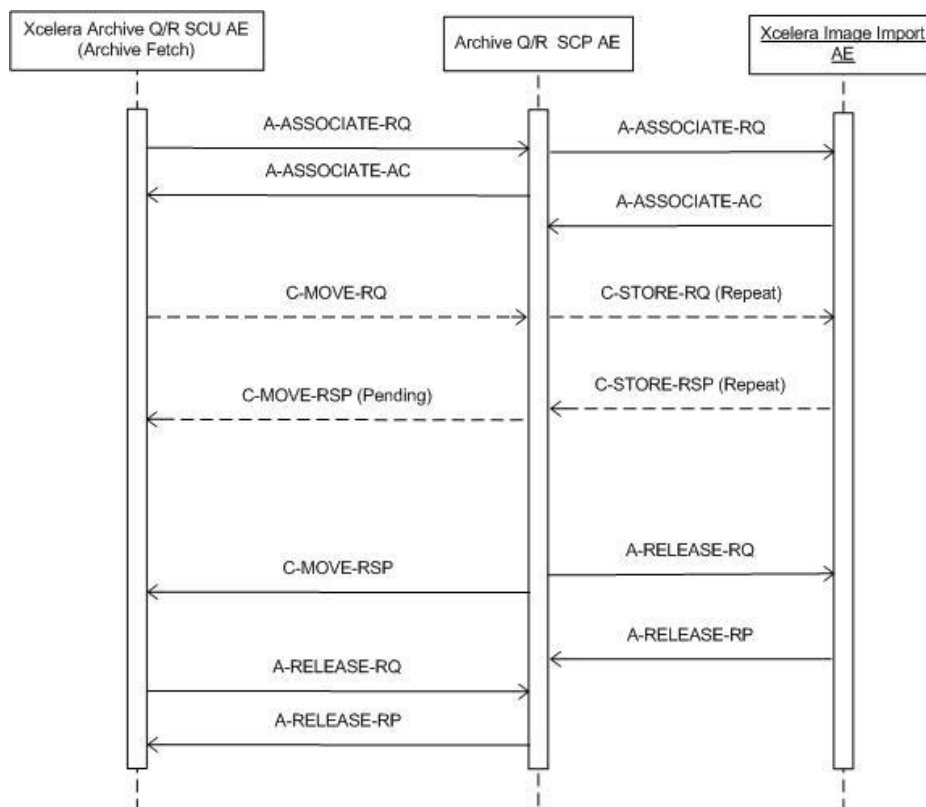

Figure 4: (Real World) Activity - MOVE As SCU (Archive Fetch)

 Steps in fetch from DICOM Archive:

1. Send a DICOM C-MOVE (using Study UID from the database as identifier) request to the DICOM archive for each study to be fetched.
2. In response to the C-MOVE, DICOM Archive performs a C-STORE to Xcelera data Import AE.

4.2.1.3.2.2. Proposed Presentation Contexts

The presentation contexts proposed by Archive QR SCU AE for (Real-World) Activity – C-MOVE are defined in next table.

Table 15: Proposed Presentation Contexts for (Real-World) Activity – MOVE As SCU

		Explicit VR Little Endian	1.2.840.10008.1.2.1			
		Implicit VR Little Endian	1.2.840.10008.1.2			

4.2.1.3.2.3.   SOP Specific Conformance for Study Root QR Information Model - MOVE SOP Class

Only Study level queries are supported.

The Archive QR SCU AE supports queries based on the combination of the following (Study level) attributes and attribute matching types (as defined in [DICOM] PS 3.4).

Exceptions:
1. If after setting up the connection and sending the move request, if no data is received from the external DICOM node before a (user configurable) time out has passed; the QR SCU AE aborts the connection.
2. If an error occurs on the external DICOM node while setting up the connection, the QR SCU AE will abort all actions related to the connection and report errors.
3. If no agreement between the two parties can be reached concerning communication parameters the connection will be closed and no query communications will take place.
4. If an error occurs on the DICOM Archive server during query communications, the DICOM Archive server will abort the connection.

4.2.1.3.2.3.1.   Dataset Specific Conformance for Study Root QR Information Model - MOVE SOP Class C-MOVE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

Table 17: DICOM Command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Sub-operations complete – No failures	The Retrieve job is marked as Completed at the queue manager. The association is released.
Failed	A900	Identifier does not match SOP class	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.
	Cxxx	Unable to process	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.
Refused	A701	Out of resources – Unable to calculate number of matches	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.
	A702	Out of resources – Unable to perform sub-operations	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.

Service Status	Error Code	Further Meaning	Behavior
	A801	Destination unknown	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.
Pending	FF00	Sub-operations are continuing	The Retrieve job continues.
Warning	B000	Sub-operations complete – One or more failures	The Retrieve job is marked as Completed at the queue manager. The association is released. The reason is logged.
Cancel	FE00	Sub-operations terminated due to Cancel indication	The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.
	When no status match		The Retrieve job is marked as Failed at the queue manager. The association is released. The reason is logged.

The possible Communication Failures are listed here.

Table 18: DICOM Command Communication Failure Behavior

Exception	Behavior
Reply Time-out	The job fails and the association is aborted. The reason is logged and reported to the user.
Association Time-out SCU	N/A
Association Aborted	The job fails. The reason is logged and reported to the user.

4.2.1.3.3.   (Real-World) Activity – Image Export

4.2.1.3.3.1.   Description and Sequencing of Activities

In this chapter the Export of Instance (Archive Storage SCU) behavior of the Xcelera will be described.

Normal flow of events for Image Export (Archive Storage SCU):
1. When the condition for Archiving of study/studies is met (based on the Archive Configuration settings); Xcelera sets up a store connection and negotiates communication parameters with this Archive DICOM node. Connection setup is executed according to DICOM Store protocols, with Xcelera acting as DICOM Store SCU.
2. After this connection is setup, Xcelera send study/studies to the external DICOM node. Upon completion of this, the connection is closed. Start and end of the connection and data transfer are logged.
Figure 5: (Real World) Activity – Export of Instances (Archive Storage SCU)

4.2.1.3.3.2.   Proposed Presentation Contexts

The presentation contexts for the Export Instances are defined in the next table.

4.2.1.3.3.3.   SOP Specific Conformance for Storage SOP Classes

During DICOM based auto-forward, transfer negotiations may indicate that the original format of the data is not accepted by the target node. In such cases, the DICOM ARCHIVE server will try to apply one of the transfer syntax conversions indicated by '+', in order to get to transfer syntax that is supported by the external system. The Transfer syntax conversion is supported from SCU to SCP.

The Archive AE conforms to the SOP classes of the Storage Service Class at level 2 (full). No data elements are discarded or coerced by the Archive AE.

4.2.1.3.3.3.1. Dataset Specific Conformance for C-STORE-RQ

Detail regarding the Dataset Specific response behavior will be reported in this section.
This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

STORE-SCU acts on the Status Reponses which are shown in the next table:

Table 22: DICOM command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Log; Continue.
Refused	A700	Data set does not match SOP class	Log.
Warning	B000	Coercion of data elements	Log; Continue.
	B006	Elements discarded	Log; Continue.
	B007	Data set does not match SOP class	Log; Continue.
Error	0110	Error – Processing failure	Log.
	A900	Error – Data set does not match SOP class	Log.
	C000	Error – Cannot understand	Log.

Exceptions:

1. If, after setting up the connection, no data can be sent to the external DICOM node for 2 minutes, Xcelera will retry for 15 times with a interval of 2^n and then it will abort the connection.
2. If an error occurs on Xcelera while setting up the connection, Xcelera aborts and reports error.
3. If an error occurs on the external DICOM node while setting up the connection, Xcelera will abort all actions related to that connection and report errors.
4. If no agreement between the two parties can be reached concerning communication parameters the connection will be closed and no data transfer will take place.
5. When a network error occurs during connection set up or during data transfer, Xcelera will abort all actions related to the connection.
6. If an error occurs on Xcelera during the data transfer, Xcelera will notify the external DICOM node of this problem. After retrying notifying the external DICOM node of this problem for 15 times, with an interval of 2^n, the connection will be closed.

Exception	Behavior
Timeout	The association is closed and the reason logged

4.2.1.3.4. (Real-World) Activity – Storage Commitment Push Model AS SCU

4.2.1.3.4.1.   Description and Sequencing of Activities

Normal Flow of events:

1. After the configured time, Xcelera will initiate a Storage Commit request for the study that it stored into the DICOM Archive.

2. When a successful response from the DICOM archive is received, for this study, Xcelera mark this study as correctly archived.

The Archive AE (Storage Commitment) provides standard conformance to the Storage Commitment Push Model SOP Class.

4.2.1.3.4.3.1.   Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-EVENT-REPORT-SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

The N-EVENT-REPORT-SCP can send the next status responses as listed in the table below:

Table 25: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation	The association will be released. The reason is logged.

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation	The association will not release. The reason is logged.
Failure	xxxx	(any failure)	The reason is logged.

During the N-ACTION-SCU communication the next failures can occur:

Table 29: DICOM Command Communication Failure Behavior

Exception	Behavior
Reply Time-out	The association is released.
Association Time-out SCU	The association is released.
Association Aborted	The association is released.

Exceptions:

1. After setting up the connection, if no data can be sent to the external node for 60 seconds, Xcelera aborts the connection and reports an error.
 2. An error occurs on the target node while setting up the connection. If the retries are unsuccessful, the system will mark the data for later archiving.
 3. If an error or warning concerning data transfer is received from the target node during data transfer. If it is related to the data being send Xcelera tries to correct the cause of the error
 4. When Xcelera cannot setup connection with the DICOM Archive, Xcelera will retry for 3 times (configurable). If within these retries, if it is still not possible to setup the connection, the study will be re-archived, conforms its own retry mechanism and a warning will be

reported.

5. When Xcelera does not receive a storage commit report within 72 hours, the study will be re-archived, conforms its own retry mechanism and a warning will be reported.

6. When the Xcelera receives a storage commit response other than successful, the study will be re-archived, conforms to its own retry mechanism and a warning will be reported.

4.2.1.4.   Association Acceptance Policy

Not applicable, Archive AE does not accept associations.

4.2.1.4.1.   (Real-World) Activity – Image Import

4.2.1.4.1.1.   Description and Sequencing of Activities

As defined by the Xcelera System RWA Import instances, the Import image AE acts as a Storage SCP for any DICOM Archive that is configured on the Xcelera System, using an accepted presentation context.
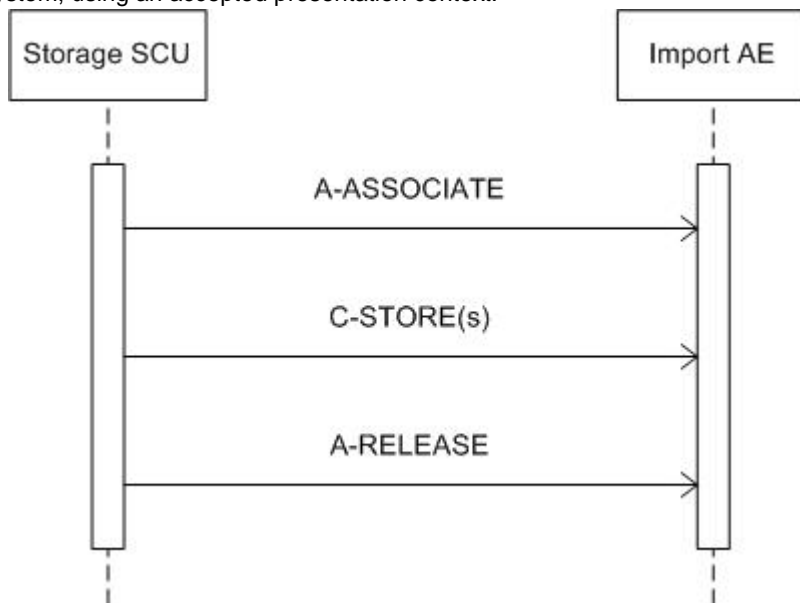

Figure 8: Import Image AE as Storage SCP

The Import Image AE accepts associations from other systems that wish to store instances in the Xcelera System database, using the C-STORE command.

4.2.1.4.1.2.   Accepted Presentation Contexts

The accepted presentation contexts for Image Import are listed in the next table.

The Xcelera System does not support extended negotiations for Image Import.

The order of the proposed transfer syntaxes is configurable. Default the ELE transfer syntax is preferred.

4.2.1.4.1.3.   SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.
The possible Communication Failures and the possible Status Responses during a C-STORE-RQ are listed in the next tables below.

4.2.1.4.1.3.1.   Dataset Specific Conformance for C-STORE-RSP

Possible status responses during the C-STORE responses are shown in the next table:

Table 31: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Log; continue.
Failure	A7xx	Refused: Out of Resources	Log; continue.
	A9xx	Error: Data Set does not match SOP Class	Log; continue.
	Cxxx	Error: cannot understand	Log; continue.
Warning	B000	Coercion of Data Elements	Log; continue.
	B007	Data Set does not match SOP Class	Log; continue.
	B006	Elements Discarded	Log; continue.
Reject	0111	Duplicated SOP Instances	Study will be rejected

The possible network communication failures are shown in the following table:

Table 32: Communication Failure Behavior for C-STORE-RSP.

Exception	Behavior
ARTIM Time-out	The store job fails in case of association setup. The reason is logged.
Reply Time-out	The store job fails and association is aborted. The reason is logged.
Association Time-out SCU	The association is released.
Association aborted	The store job fails. The reason is logged.

4.2.2. Auto Export AE

Detail of this specific Application Entity is specified in this section.

4.2.2.1. SOP Classes

The Image Export AE is used for exporting DICOM Instances (images, objects) from Xcelera Server to remote system. The Image Export AE makes use of the following DICOM functions:

- Verification as SCU, which uses C-ECHO service element.
- Storage as SCU, which uses C-STORE as service element.
- Patient / Study are always updates with the latest information for the exported studies. (Refer to the tables in section 4.2.2.3.2.3 for the list of updated patient and study attributes)

These DICOM functions will be described in the following subsections.

The Auto Export Application Entity provides Standard Conformance to the following SOP Classes:

4.2.2.2. Association Policies
Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.2.2.1. General
The DICOM standard application context is specified below.

Table 34: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.2.2.2. Number of Associations
The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

Table 35: Number of associations as an Association Initiator for this AE

Description	Value
Maximum number of simultaneous associations	Limited by system resource.

4.2.2.2.3. Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

Table 36: Asynchronous nature as an Association Initiator for this AE

Description	Value
Maximum number of outstanding asynchronous transactions	Not applicable

4.2.2.2.4. Implementation Identifying Information

The value supplied for Implementation Class UID and version name are documented here.

Table 37: DICOM Implementation Class and Version for Auto Export AE

Implementation Class UID	1.3.46.670589.16.14.4.1.1
Implementation Version Name	Xcelera R4.1.L1

4.2.2.2.5. Communication Failure Handling

The behavior of the AE during communication failure is summarized in the next table.

Table 38: Communication Failure Behavior

Exception	Behavior
ARTIM Timeout	The association closed and the reason is logged.

4.2.2.3. Association Initiation Policy

The Application Entity will respond on a received reject Association attempt as shown in next table.

4.2.2.3.1.   (Real-World) Activity – Verification as SCU

4.2.2.3.1.1.   Description and Sequencing of Activities

Auto Export AE initiates an association with the remote AE.
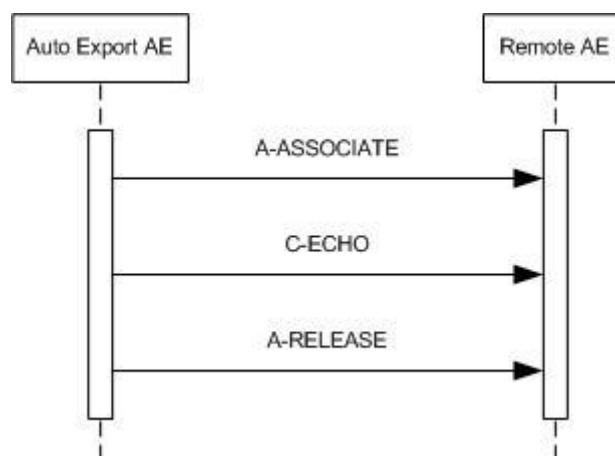

Figure 9: (Real World) Activity - Verification as SCU.

4.2.2.3.1.2.   Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association. The association will be closed immediately upon receiving the response.

The presentation contexts proposed by DICOM Manager for (Real-World) Activity - Verification as SCU are defined in the following table.

Table 41: Proposed Presentation Contexts for (Real-World) Activity – Verification as SCU

4.2.2.3.1.3.   SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.2.3.1.3.1.   Dataset Specific Conformance for Verification C-ECHO SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 42: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Success, Matching is complete	The SCU has successfully send C-ECHO.
Other than success	<>0000	Problems with sending the C-ECHO	The SCU failed to send the C-ECHO; user is notified. Logged

4.2.2.3.2.   (Real-World) Activity – Image Export

4.2.2.3.2.1.   Description and Sequencing of Activities

The (Real World) Activity - Image Export (Data Export) is explained here for a Normal flow of events:

1. Xcelera sets up a connection with the target DICOM node and negotiates communications parameters. If the two parties cannot agree on transfer using the data format stored on the server, Xcelera will negotiate an alternative DICOM transfer syntax and create a converted copy of the study data to be transferred.
2. Then Xcelera transfers data (complete study or SC only) to the target DICOM node depending on configuration setting, Xcelera auto forwards studies completely, or only new deltas such as photo files or new instances coming from an acquisition system.
3. Upon completion of this transfer, the connection is closed. Connection set up and connection release, and data transfer takes place according to the DICOM Store protocol defined as part of the DICOM 3.0 standard.

The next figure shows the image (instance) export functionality.
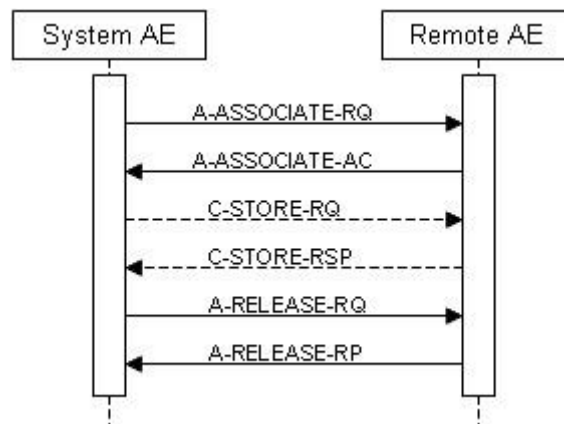

Figure 10: (Real World) Activity - Image Export (Data Export)

4.2.2.3.2.3.   SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.2.3.2.3.1.   Dataset Specific Conformance for C-STORE-RQ

Detail regarding the Dataset Specific response behavior will be reported in this section.
This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 44: DICOM command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Log: Continue.
Refused	A700	Refused – Out of resources	Log; Release association; Release application; Retry to send the images.
Failure	0110	Error – Processing failure	Log; Release association; Release application; Retry to send the images
	A900	Error – Data set does not match SOP class	Log; Release association; Release application; Retry to send the images
	C000	Error – Cannot understand	Log; Release association; Release application; Retry to send the images
Warning	B000	Coercion of Data Elements	Log; Continue
	B007	Data Set does not match SOP Class	Log; Continue
	B006	Elements Discarded	Log; Continue

Exceptions:

Xcelera always retry in case of errors for 15 times, with an interval of 2^n, before aborting the connection in the following cases:
1. If, after setting up the connection, no data can be sent to the external node for 60 seconds, Xcelera aborts the connection.
2. If an error occurs on Xcelera while setting up the connection, Xcelera aborts the connection.
3. If an error occurs on the target node while setting up the connection. If the retries are unsuccessful, the system will mark the data for later.
4. If an error occurs on Xcelera during the instance conversion or the instance transfer, Xcelera will abort the auto forward process. A final error will be reported.
5. If an error occurs on the target node during data transfer, results the connection to be aborted Xcelera will report this error.
6. An error or warning concerning data transfer is received from the target node during data transfer. If it is related to the data being send, Xcelera tries to correct the cause of the error (e.g. by redoing the conversion). All information available on the error or warning will be reported.
7. Only the DICOM instances of the services where both parties agreed upon are forwarded, this will be reported.

During the DICOM based auto-forward, the transfer negotiations may indicate that the original format of the data is not accepted by

the target node. In such cases, the DICOM ARCHIVE server will try to apply one of the transfer syntax conversions indicated by '+', in order to get to transfer syntax that is supported by the external system.

Next table gives an overview of the supported Transfer Syntax conversions from SCU to SCP.

4.2.3. Image Import AE

Detail of this specific Application Entity is specified in this section.

4.2.3.1. SOP Classes

The Image Import AE is used for importing DICOM Instances (images, objects) from remote system into Xcelera Server. The Image Import AE makes use of the following DICOM functions:

- Verification as SCP, which uses C-ECHO service element.
- Storage as SCP, which uses C-STORE as service element.
- Storage Commitment as SCP, which uses N-ACTION and N-EVENT-REPORT service elements.

The separate AE's need to be configured for Storage and Storage Commitment functionalities.

This Application Entity provides Standard Conformance to the following SOP Classes.

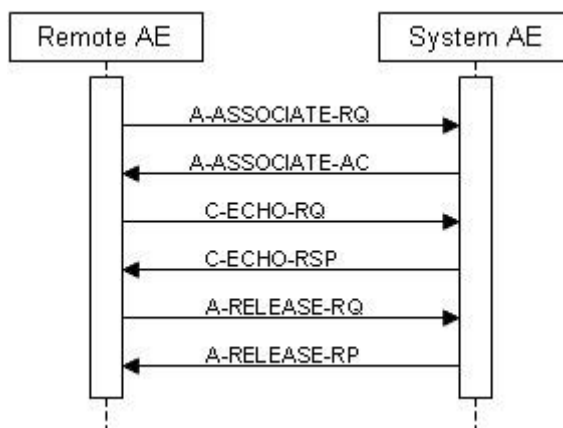

Figure 12: (Real World) Activity - Verification as SCP

4.2.3.4.1.2.   Accepted Presentation Contexts

The presentation contexts are defined in the next table.

Table 56: Acceptable Presentation Contexts for (Real-World) Activity – Verification as SCP

Presentation Context Table					
Abstract Syntax		**Transfer Syntax**		**Role**	**Extended Negotiation**
Name	**UID**	**Name List**	**UID List**		
Verification SOP Class	1.2.840.10008.1.1	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCP	None
		Explicit VR Little Endian	1.2.840.10008.1.2.1		
		Implicit VR Little Endian	1.2.840.10008.1.2		

The Import Image AE accepts all contexts in the intersection of the proposed and acceptable Presentation Context. This means that the Import Image AE will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

4.2.3.4.1.3.   SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.3.4.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCP

The DICOM command communication behavior is shown in the following table. The standard as well as the specific status codes and their corresponding behavior are also specified.

Table 57: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation	Message in log file.

4.2.3.4.2. (Real-World) Activity – Image Import

4.2.3.4.2.1. Description and Sequencing of Activities

A remote system can sets up an association with Xcelera. If Xcelera has not reached already the maximum number of associations, Xcelera will communicate with each remote system.

If suitable, Xcelera will accept the association with a preferred presentation context. Then the remote system may transfer its instance data to Xcelera. When the complete instance has been received, Xcelera will send a C-STORE response to notify the remote system that the transfer is completed successfully and the remote system may release the association.

Next figure shows the Image Import functionality.

Note that only for configured systems some additional information can be configured, like institution-, department- and station - name, and whether the study must be archived or not.

The Import Image AE accepts all Presentation contexts listed in the above table. This means that the Import Image AE will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

4.2.3.4.2.3.   SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

Xcelera conforms to the SOP classes of the Storage Service Class. Xcelera discards no data elements.

The instances received by Xcelera are merged on Study UID and Series UID.
For ultrasound images only the Image Information Entity level is supported.

The following are the restrictions and exceptions for the normal behavior of the Image Import AE:

1. Xcelera try to notify the external DICOM node about the reason for not accepting the connection and will be reported.
 2. If no agreement between the two parties can be reached concerning (DICOM) communication parameters the connection will be closed and no data transfer will take place and this will be reported.
3. Xcelera will close the connection if no data is received within 2 minutes after the setup and will be reported.
4. If a network error occurs during set up of a connection or during data transfer, this is reported. Xcelera will abort the connection and data transfer will not be completed.
5. By errors during data transfer Xcelera will notify the external DICOM node and closed the connection and will be reported.
6. DICOM Type 1 Attributes checked during storing of study objects:

Table 59: DICOM Type 1 Attributes Checked During Storing of Study Objects

DICOM Attributes	Presence	Non Empty Value
Study Instance UID	Yes	Yes
Series Instance UID	Yes	Yes
SOP Class UID	Yes	Yes
SOP Instance UID	Yes	Yes

The following attributes are checked as well for image objects:

Table 60: DICOM Type 1 Attributes Checked During Storing of Image Objects

DICOM Attributes	Presence	Non Empty Value
Samples per pixel	Yes	Yes
Rows	Yes	Yes
Columns	Yes	Yes
Bits Allocated	Yes	Yes
Bits Stored	Yes	Yes
High Bit	Yes	Yes
Photometric Interpretation	Yes	Yes
Pixel Data	Yes	Yes

If DICOM composite-object attributes are missing or empty then the system will:
   a. Discard all data received for the associated objects.
   b. Return an appropriate DICOM error message to the DICOM image system making the store request.
7. If an object received has the same DICOM SOP Instance UID as an object already stored on Xcelera, Xcelera will do either of the following:

- If the already stored object has the same UID's on instance, study and series level as the new one, Xcelera will replace the stored object with the new object. This will not be communicated to the DICOM instance system, which will thus perceive this as a normal store.
OR
- Depending on the configuration setting "Send Study after Finalized State or Time our Expired" on the Archive page of the service tool, the following will be done. When the study has the status "finalize" and has the same requirements as the previous bullet point, the study will be discarded and will be communicated to the external DICOM node with the status "C-STORE_DUPLICATE_SOP_INSTANCES".
- If the already stored object has a different study or series UID as the new one; Xcelera will discard the object and send an error to the DICOM image system. The connection will remain open in order to allow the DICOM image system to recover from this error.

Importing of DICOM Structure Reports.
Xcelera Image Import AE supports the DICOM Structured Reports from any DICOM nodes. Xcelera uses the DICOM Structured Reports objects for displaying and reporting of the measurement values of the Adult Echocardiography Reports.

Xcelera is multi-vendor compliance for Structured Reports.

4.2.3.4.2.3.1.   Dataset Specific Conformance for C-STORE-RSP

Detail regarding the Dataset Specific response behavior will be reported in this section.
This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

4.2.3.4.3.   (Real-World) Activity – Storage Commitment Push Model AS SCP

4.2.3.4.3.1.   Description and Sequencing of Activities

Normal Flow of events:

1. Storage Commitment AE will initiate a request to the Storage Commitment SCP.
2. When a successful response from the Storage Commitment SCP is received, Storage Commitment AE marks this as correctly working Storage Commitment SCP.
Figure 14: (RWA) Storage Commitment SCP

4.2.3.4.3.2.   Accepted Presentation Contexts

The presentation contexts are defined in the next table.

The Remote AE (Storage Commitment) provides standard conformance to the Storage Commitment Push Model SOP Class.

4.2.3.4.3.3.1.   Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-EVENT-REPORT-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Failure	xxxx	(any failure)	The reason is logged.

Exceptions:

1. After setting up the connection, if no data can be sent to Xcelera before timeout, Remote AE aborts the connection and reports an error.

2. If an error or warning concerning data transfer is received from the target node during data transfer. If it is related to the data being send Remote AE tries to correct the cause of the error

3. When Remote AE cannot setup connection with the Xcelera. Remote AE will retry to make connection. If it is still not possible to setup the connection, conforms its own retry mechanism, and warning will be reported.

4. When the Remote AE receives a storage commit response other than successful, the study will be re-archived, conforms to its own retry mechanism and a warning will be reported.

4.2.4.   Print AE

Detail of this specific Application Entity is specified in this section.

4.2.4.1.   SOP Classes

After the print job is selected, Xcelera will initiate DICOM associations for the DICOM Basic Grayscale Printing Service and the DICOM Verification Service with the DICOM printer (SCP).
 The print job with or without annotation is send to the printer. Xcelera supports a maximum PDU size of 28KBytes.
The printer prints the print job and sends a successful response back to Xcelera. Xcelera shows this response on the system screen.

This Application Entity provides Standard Conformance to the following SOP Classes.

Table 69: SOP Classes for Print AE

SOP Class Name	SOP Class UID	SCU	SCP
Print Job SOP Class	1.2.840.10008.5.1.1.14	Yes	No

Any SOP specific behavior above is documented later in this conformance statement in the applicable SOP specific conformance section.

4.2.4.2.   Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.4.2.1.   General

The maximum PDU Size that the Print AE will use is not configurable.

The DICOM standard application context is specified below.

4.2.4.3.1.   (Real-World) Activity – Print Management as SCU

4.2.4.3.1.1.   Description and Sequencing of Activities

The sequence of interactions between the Xcelera Print AE and a remote printer AE to print one film sheet is presented as follows:

After the print job is selected on Xcelera a connection with the DICOM printer will be made.
The print job consists of data describing the images and graphics to be printed as well as the requested layout and other parameters. One print job on the Xcelera may result in a number of film sessions with the printer equal to the number of printed film sheets. Each film sheet within the print job is internally processed, converted to a STANDARD/1,1 page and then an association towards the remote Print Server is established and the page image is sent with or without annotation to the selected DICOM printer.

The printer prints the print job and sends a successful response back to the Xcelera. The Xcelera reports the success on the screen for the user.

Once the transmission of the film sheet is completed, the association with the printer is closed.

This section specifies each IOD created (including private IOD's).

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS	The attribute is always present with a value
EMPTY	The attribute is always present without any value (attribute sent zero length)
VNAP	The attribute is always present and its Value is Not Always Present
	(attribute sent zero length if no value is present)
ANAP	The attribute is present under specified condition – if present then it will always have a value
VNAPCV	The attribute is present under specified condition – if present then its Value is Not Always Present
	(attribute sent zero length if condition applies and no value is present)
ANAPEV	The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO	The attribute value is generated automatically
CONFIG	The attribute value source is a configurable parameter
COPY	The attribute value source is another SOP instance
FIXED	The attribute value is hard-coded in the application
IMPLICIT	The attribute value source is a user-implicit setting
MPPS	The attribute value is the same as that use for Modality Performed Procedure Step
MWL	The attribute value source is a Modality Worklist
USER	The attribute value source is explicit user input

4.2.4.3.1.3.   SOP Specific Conformance for Basic Film Session SOP Class of the Basic Grayscale Print Management Meta SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

Exceptions:

The print job cannot be completed by the printer:

1. Printer errors are handled as given in the next table.
2. DICOM transfer errors to the printer are treated as normal DICOM transfer errors and are recorded appropriately.
3. The printer can use the Basic Annotation Box SOP Class when the annotation flag is set. A control on the SOP Classes during setup of the Association is used to check of the printer known this SOP Class.

4.2.4.3.1.4.1.   Dataset Specific Conformance for Print Job N-EVENT-REPORT SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

Xcelera does not respond to N-EVENT-REPORT from the Printer.

Note:
N-EVENT-REPORT is an asynchronous message from the printer in situations such as no film supply, low cartridge, print door opened, etc. Xcelera does not handle this and responds with either ABORT or releasing the association. On the User Interface the Print Job is displayed as failed and the user needs to resend the image.

4.2.4.3.1.7.   SOP Specific Conformance for Basic Film Box SOP Class of the Basic Grayscale Print Management Meta SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Print AE conforms to the Basic Film Box SOP Class. No data elements are discarded or coerced by the Print AE.

Exceptions:

The print job cannot be completed by the printer:

1. Printer errors are handled as given in the next table.
2. DICOM transfer errors to the printer are treated as normal DICOM transfer errors and are recorded appropriately.
3. The printer can use the Basic Annotation Box SOP Class when the annotation flag is set. A control on the SOP Classes during setup of the Association is used to check of the printer known this SOP Class.

4.2.4.4. Association Acceptance Policy

Not applicable, Print AE does not accept any associations.

4.2.5.   Query Retrieve as SCP AE

Detail of this specific Application Entity is specified in this section.

4.2.5.1.   SOP Classes

The Query/Retrieve SCP AE is used for handling incoming Query/Retrieve requests. The actual sending of DICOM Instances (images, objects) from Xcelera Server to remote system is handled by another AE. The Query/Retrieve SCP AE makes use of the following DICOM functions:

- Verification as SCP, which uses C-ECHO service element.
- Query as SCP, which uses C-FIND as service element.
- Retrieve as SCP, which uses C-MOVE as service element.
- Patient / Study are always updates with the latest information for the exported studies. (Refer to the tables in section 4.2.5.3.2.4 for the list of updated patient and study attributes)

This Application Entity provides Standard Conformance to the following SOP Classes.

4.2.5.2. Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.5.2.1. General

The DICOM standard application context is specified below.

Table 100: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.5.2.2. Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

The number of associations that Query Retrieve SCP AE can handle is up to 10. For the verification service at least one association can be handled simultaneously. The Query Retrieve SCP AE will only accept DICOM associations from other DICOM nodes whose AE titles are listed in the Xcelera configuration files. The storage part of the Query Retrieve SCP function can handle maximum of 5 associations simultaneously.

Table 101: Number of associations as an Association Initiator for this AE (C-STORE)

4.2.5.3.1.   (Real-World) Activity – Image Export

4.2.5.3.1.1.   Description and Sequencing of Activities

Normal flow of events:

1. Xcelera accepts the set up request of the remote node. Once the connection has been set up Xcelera receives the query request. In response Xcelera will send (0 of more) queues in the result. The connection will be closed.

2. A new connection will be set up for the retrieve request. If request was successful an association with the store remote node will be set up.

3. The requested data will be sending to the store remote node

4. Connection with the store remote node and the request retrieve node will be closed.

5. Patient Study data will be updated with the latest information. (Refer to the tables in section 4.2.1.3.3.3 for the list of updated patient and study attributes.)

After the C-MOVE request the Query/Retrieve as SCP (C-STORE) will only export the requested instances.
Xcelera send these instances intermediate during the C-MOVE responses or not intermediate than the C-MOVE status "PENDING" is sending to the Remote AE.

4.2.5.3.1.3. SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

Not mentioned SOP classes are also supported, but only with the stored transfer syntax. This implies that not mentioned SOP classes are handled in such manner that what comes in will be sent out.

 - The DICOM Store SCU exports the same attribute values as were imported into Xcelera.
 - The DICOM Store SCU updates the patient study with the latest information.
 - The DICOM Store SCU supports all transfer syntaxes that are supported by DICOM import.
 - The DICOM Store SCU supports conversion of transfer syntax (must be prepared to do a conversion from the transfer syntax in which the data is stored to the transfer syntax which is negotiated with the remote DICOM Store SOP Specific Conformance for SOP Classes.
 - Only the DICOM instances of services where both parties agreed upon are stored, this will be reported.

4.2.5.3.1.3.1.   Dataset Specific Conformance for C-STORE-RQ

Detail regarding the Dataset Specific response behavior will be reported in this section.
This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

The possible status response during the C-STORE-SCU request are listed here:

Table 110: DICOM command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Log; Continue.
Refused	A700	Refused: Out of Resources	Log; Continue.
Error	0110	Error: Processing Failure	Log; Continue.
	A900	Error: Data Set does not match SOP Class	Log; Continue.
	C000	Error: cannot understand	Log; Continue.
Warning	B000	Coercion of Data Elements	Log; Continue.
	B007	Data Set does not match SOP Class	Log; Continue.
	B006	Elements Discarded	Log; Continue.

Next table shows the possible Communication Failure during C-STORE request.

Table 111: DICOM Command Communication Failure Behavior

Exception	Behavior
Timeout	The association released and the reason is logged.
Association aborted.	The association released and the reason is logged.

Exceptions:
1. If, after setting up the connection, no data can be sent to the external DICOM node for 2 minutes, Xcelera will retry once and then it will abort the connection and reports error
2. If an error occurs on Xcelera while setting up the connection, Xcelera will abort the connection and reports an error
3. If an error occurs on the external DICOM node while setting up the connection, Xcelera will abort all actions related to that connection and reports an error.
4. If no agreement between the two parties can be reached concerning communication parameters the connection will be closed and no data transfer will take place. Xcelera reports an error.
5. When a network error occurs during connection set up or during data transfer, Xcelera will abort all actions related to the connection and reports and error.

During DICOM based store, transfer negotiations may indicate that the original format of the data is not accepted by the target node. In such cases, the remote store server will try to apply one of the transfer syntax conversions indicated by '+', in order to get to transfer syntax that is supported by the external system. The Transfer syntax conversion is supported from SCU to SCP.

4.2.5.4.1.　(Real-World) Activity – Verification as SCP

4.2.5.4.1.1.　Description and Sequencing of Activities

The Query/Retrieve as SCP AE accepts associations from systems that wish to verify application level communication using the C-ECHO command.
Figure 18: (Real World) Activity - Verification as SCP

4.2.5.4.1.2.　Accepted Presentation Contexts

The presentation contexts are defined in the next table.

4.2.5.4.1.3.　SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Query/Retrieve as SCP AE provides standard conformance to Verification SOP Class

The Query/Retrieve as SCP (C-ECHO) accept all contexts in the intersection of the proposed and acceptable Presentation Context. This means that the Query/Retrieve as SCP AE will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

4.2.5.4.1.3.1.　Dataset Specific Conformance for Verification C-ECHO SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

4.2.5.4.2.   (Real-World) Activity – FIND as SCP

4.2.5.4.2.1.   Description and Sequencing of Activities

Xcelera allows the clinical user to query and retrieve data from other systems in the DICOM network. In communications with other nodes, Xcelera operates as a DICOM Query/Retrieve SCP and DICOM Store SCU, which are compatible with DICOM Query/Retrieve SCU and Store SCP provided by other products.

Query/Retrieve as SCP AE accepts associations from systems that wish to query Xcelera database using the C-FIND command.

4.2.5.4.2.2.   Accepted Presentation Contexts

The presentation contexts are defined in the next table.

4.2.5.4.2.3.   SOP Specific Conformance for Patient Root QR Information Model - FIND SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Query/Retrieve as SCP provides standard conformance.

The Query/Retrieve as SCP accepts all contexts in the intersection of the proposed and acceptable Presentation Context. This means that the Query/Retrieve as SCP will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

If the C-FIND query is such that more than 1000 matches are found the Query/Retrieve SCP will return an error "out of resources" indicating there are more matches than the system can handle.

If a wildcards are used in a C-FIND, all matching records and all null records are returned by Xcelera.

4.2.5.4.2.3.1.　Dataset Specific Conformance for Patient Root QR Information Model - FIND SOP Class C-FIND-SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

4.2.5.4.3. (Real-World) Activity – MOVE as SCP

4.2.5.4.3.1. Description and Sequencing of Activities

The Query/Retrieve as SCP AE accepts associations from systems that wish to retrieve instances from Xcelera database using the C-MOVE service. The Query/Retrieve as SCP AE accepts all contexts in the intersection of the proposed and acceptable Presentation Context. This means that the Query/Retrieve as SCP AE will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

Detail of this specific Application Entity is specified in this section.

4.2.6.1.   SOP Classes

The Query/Retrieve SCU AE is used for sending Query/Retrieve requests to remote system. The actual import of DICOM Instances (images, objects) into Xcelera Server is handled by another AE. The Query/Retrieve SCU AE makes use of the following DICOM functions:

- Query / Retrieve SCU, which uses C-ECHO as service element.
- Query as SCU, which uses C-FIND as service element.
- Retrieve as SCU, which uses C-MOVE as service element.
This Application Entity provides Standard Conformance to the following SOP Classes.

Table 138: SOP Classes for Query Retrieve as SCU AE

SOP Class Name	SOP Class UID	SCU	SCP
Verification SOP Class	1.2.840.10008.1.1	Yes	No
Study Root QR Information Model - FIND SOP Class	1.2.840.10008.5.1.4.1.2.2.1	Yes	No
Study Root QR Information Model - MOVE SOP Class	1.2.840.10008.5.1.4.1.2.2.2	Yes	No

Note: Any SOP specific behavior is documented later in the conformance statement in the applicable SOP specific conformance section.

4.2.6.2.   Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.6.2.1.   General

The DICOM standard application context is specified below.

Table 139: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.6.2.2.   Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

Table 140: Number of associations as an Association Initiator for this AE

Description	Value
Maximum number of simultaneous associations	5

4.2.6.2.3.   Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

Note: No extended negotiations supported by Xcelera Network AE.

4.2.6.3.1.3. SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.6.3.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 147: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Matching is complete	Continue; information logged.

4.2.6.3.2. (Real-World) Activity – FIND As SCU

4.2.6.3.2.1. Description and Sequencing of Activities

The Query/Retrieve as SCU AE initiates associations to other systems that support the Study Root Query/Retrieve C-FIND service.

Normal flow of events for C-FIND:
1. The user selects criteria's where to query on and after that, Xcelera sets up a connection with the selected external DICOM node.
2. Based on query results, the user selected on or more entries to be retrieved. The retrieve request will be send to the remote DICOM node.
3. In response, the external DICOM node returns (0 or more) query results in the form of a list of studies that meet the search criteria entered earlier by the clinical user. The user selects the studies to retrieve from the external DICOM node.
4. When the requested instances are stored, the remote host closes the connection with Xcelera.
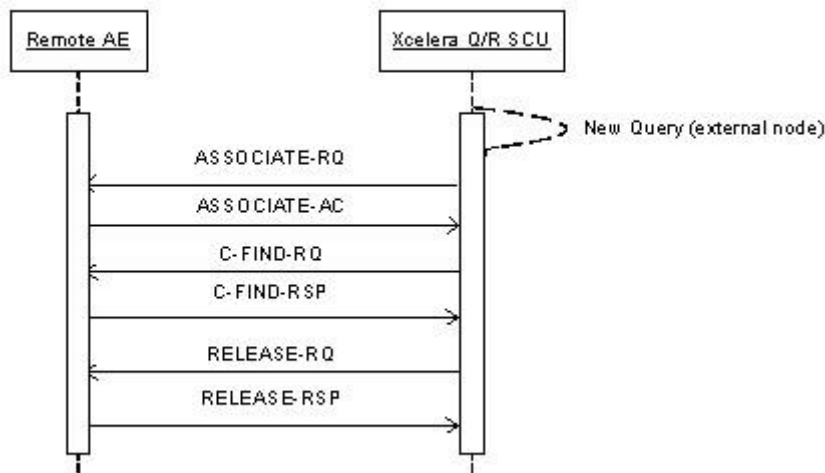

Figure 20: (Real World) Activity - FIND As SCU

Normal flow of events for C-MOVE:

1. Based on query results, the user selected on or more entries to be retrieved.

2. Xcelera sets up a request connection with the external DICOM node that provided the query results, and negotiates communication parameters.

3. Xcelera sends a retrieve request to the external DICOM node. The external DICOM node sets up a store connection with the Store SCP. Connection set up take place and is only accepted by the Store SCP, if the Query/Retrieve SCU has an open retrieve connection with the external DICOM node. Meanwhile it is possible to send C-MOVE-RSP PENDING to the Xcelera server.

4. The external DICOM node sends over the requested DICOM instance data.

5. The connection will be closed by Xcelera.
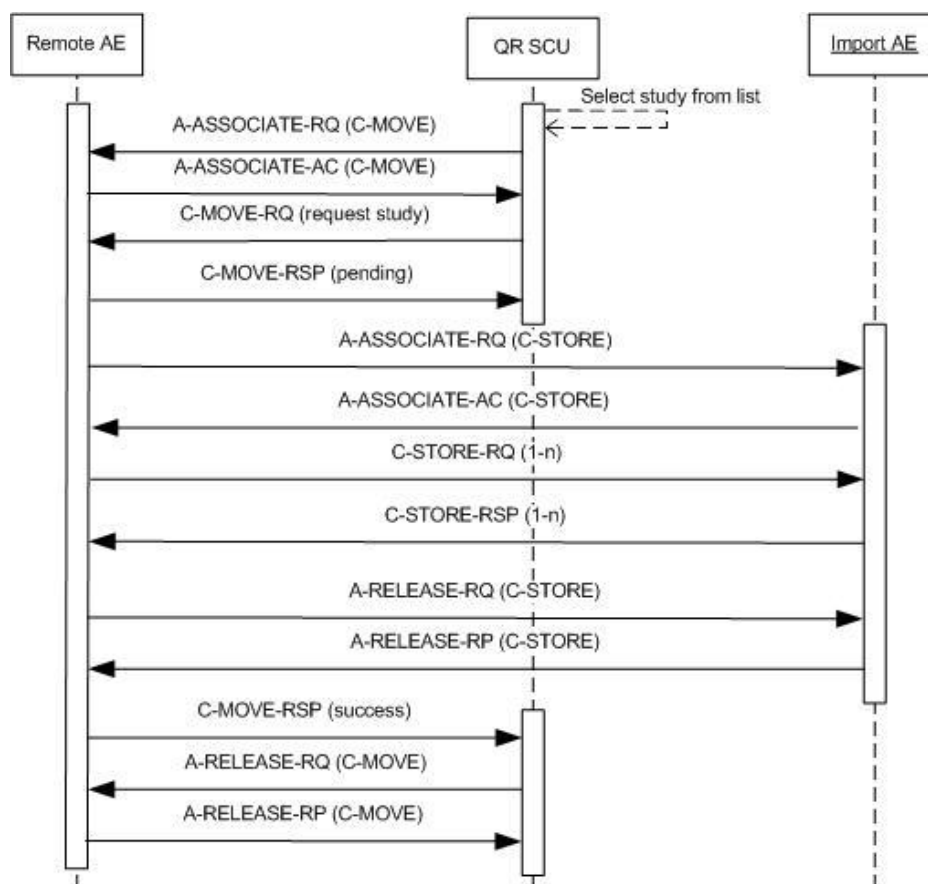

Figure 21: Flow diagram Retrieve DICOM image data from external DICOM node.

4.2.6.3.2.2. Proposed Presentation Contexts

The presentation contexts are defined in the next table.

4.2.6.3.2.3. SOP Specific Conformance for Study Root QR Information Model - FIND SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

Only Study level queries are supported.

The Query/Retrieve as SCU AE supports queries based on the combination of the following (Study level) attributes and attribute matching types (as defined in [DICOM] PS 3.4).

4.2.6.3.2.3.1. Dataset Specific Conformance for Study Root QR Information Model - FIND SOP Class C-FIND-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

Service Status	Error Code	Further Meaning	Behavior
Pending	FF00	Sub-operations are continuing	Continue.
	FF01	Sub-operations are continuing	Continue.

Exceptions:

1. The maximum number of parallel query/retrieve is reached. The request is queued by FIFO order.

2. At any point in time, an error occurs in the network or on the external DICOM node; Xcelera will close the connection and report an error

3. If an error occurs during data transfer, Xcelera will close the connection and report an error

4. If an error occurs on de external DICOM node while setting up the connection, Xcelera will abort all actions related to that connection and report an error.

4.2.6.4.　Association Acceptance Policy

Not applicable, the Query/Retrieve SCU AE doesn't accept any associations from other DICOM nodes.

4.2.7. Send AE

Detail of this specific Application Entity is specified in this section.

4.2.7.1. SOP Classes

Send AE, for its functioning, makes use of following DICOM functions:

- Verification as SCU, which uses C-ECHO service element.
- Storage as SCU, which uses C-STORE as service element.
- Patient / Study are always updates with the latest information for the exported studies. (Refer to the tables in section 4.2.7.3.2.4 for the list of updated patient and study attributes)

These DICOM functions will be described in the following subsections.

This Application Entity provides Standard Conformance to the following SOP Classes.

4.2.7.2. Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.7.2.1. General

The DICOM standard application context is specified below.

Table 157: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.7.2.2. Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

For Xcelera the maximum number of associations limited by the availability of the system resources. The license number of the external DICOM nodes is one of these limits.

Table 158: Number of associations as an Association Initiator for this AE

Description	Value
Maximum number of simultaneous associations	5

4.2.7.2.3. Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

4.2.7.3.1.   (Real-World) Activity – Verification as SCU

4.2.7.3.1.1.   Description and Sequencing of Activities

As defined the Network AE acts as a Verification SCP for any Remote SCU as Verification SCU.
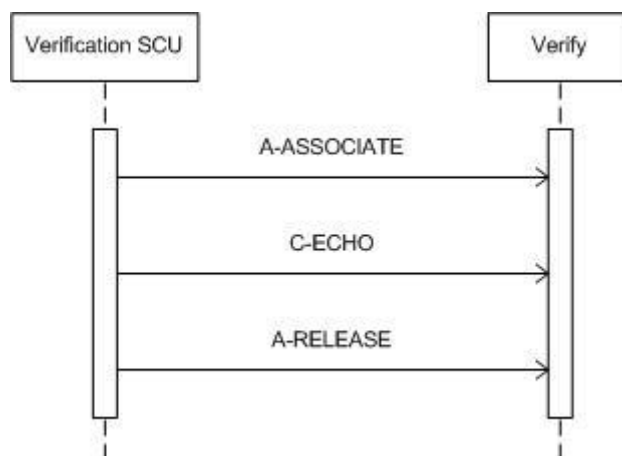

Figure 22: Sequence Verification SCU.

4.2.7.3.1.2. Proposed Presentation Contexts

The presentation contexts are defined in the next table.

Table 164: Proposed Presentation Contexts for (Real-World) Activity – Verification as SCU

4.2.7.3.1.3. SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.7.3.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 165: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Complete	Continue; matching information logged.

4.2.7.3.2. (Real-World) Activity – Image Export

4.2.7.3.2.1. Description and Sequencing of Activities

Normal flow of events:

1. The user selects one or more studies from the list of studies being displayed.

2. After selection of the external DICOM node, Xcelera sets up a store connection and negotiates communications parameters with this external DICOM node. Connection set up is executed according to the DICOM Store protocols, with Xcelera acting as a DICOM Store SCU.

3. After this connection is set up, Xcelera sends the user selected study to the external DICOM node. Upon completion of this, the connection is closed. Start and end of the connection and data transfer are logged.

4. Patient Study data will be updated with the latest information. (Refer to the tables in section 4.2.1.3.3.3 for the list of updated patient and study attributes.)

4.2.7.3.2.3. SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Send Image AE conforms to the SOP classes of the Storage Service Class at level 2 (full). No data elements are discarded or coerced by the Send Image AE.

4.2.7.3.2.3.1. Dataset Specific Conformance for C-STORE-RQ

Detail regarding the Dataset Specific response behavior will be reported in this section.
This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Possible status responses during C-STORE request are listed in the next table:

Table 167: DICOM command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Log; continue.
Refused	A700	Refused: Out of Resources	Log; continue.
Failure	0110	Error: Processing Failure	Log; continue.
	A900	Error: Data Set does not match SOP Class	Log; continue.
	C000	Error: cannot understand	Log; continue.
Warning	B000	Coercion of Data Elements	Log; continue.
	B007	Data Set does not match SOP Class	Log; continue.
	B006	Elements Discarded	Log; continue.

Exceptions:
1. The clinical user cancels the 'Send' request. If the request is already active, the store connection will be closed and no more data will be sent. If the request is not active yet, no connection will be initiated and no data will be sent.
2. If, after setting up the connection, no data can be sent to the external DICOM node, for 2 minutes, Xcelera will retry once and then it will abort the connection. Xcelera reports an error.
3. If an error occurs on Xcelera while setting up the connection, Xcelera aborts and reports an error.
4. If an error occurs on the external DICOM node while setting up the connection, Xcelera will aborts all actions related to that connection. Xcelera reports an error.

5. If no agreement between the two parties can be reached concerning communication parameters the connection will be closed and no data transfer will take place. Xcelera reports an error.

6. When a network error occurs during connection set up or during data transfer, Xcelera will abort all actions related to the connection and reports an error.

7. If an error occurs on Xcelera during data transfer, Xcelera will notify the external DICOM node of this problem and after that close the connection. Xcelera reports an error.

8. If an error occurs on the external DICOM node during data transfer, this causes the connection to be aborted. Xcelera reports an error.

Notes:

1. If the Institution Name is present in private DICOM object data it is taken from there (this only applies for CD import) If not - step 2.

2. If HIS is present and "resolve institution from HIS configured", then it is taken from HIS. If not - step 3.

3. If DICOM tag - Issuer of Patient ID (0010, 0021) in the Patient Identification Module - is not empty, Institution Name is taken from there. If not - step 4.

4. Institution Name is taken from the configuration data - default institution per AE_TITLE defined in the Service Tool (DICOM import page).

During DICOM based store, transfer negotiations may indicate that the original format of the data is not accepted by the target node. In such cases, the remote store server will try to apply one of the transfer syntax conversions indicated by '+', in order to get to transfer syntax that is supported by the external system. The Transfer syntax conversion is supported from SCU to SCP.

4.2.7.4.   Association Acceptance Policy

Not applicable, the Send AE doesn't accept any associations.

4.2.8.   Storage Commitment AE

Detail of this specific Application Entity is specified in this section.

4.2.8.1.   SOP Classes

Xcelera will support DICOM Storage Commitment as SCP, only for asynchronous workflow. The C-STORE, N-ACTION and N-EVENT-REPORT will be handled in a separate association. In the next sections the storage commitment behavior of Xcelera will be explained in detail.

This Storage Commitment Application Entity provides Standard Conformance to the following SOP Classes.

Table 171: SOP Classes for Storage Commitment AE

Note that any SOP specific behavior is documented later in this conformance statement in the applicable SOP class specific conformance section.

4.2.8.2.   Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.8.2.1.   General

The DICOM standard application context is specified below.

Table 172: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.8.2.2.   Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

For the verification service only one can be handled at a time.

4.2.8.4.1.3.   SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Storage Commitment AE provides standard conformance to the verification SOP class.

4.2.8.4.1.3.1.   Dataset Specific Conformance for Verification C-ECHO SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 180: DICOM command response status handling behavior

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Success, Confirmation	The SCU has successfully send C-ECHO.

4.2.8.4.2.   (Real-World) Activity – Storage Commitment Push Model AS SCP

4.2.8.4.2.1.   Description and Sequencing of Activities

Xcelera will support DICOM Storage commitment as SCP, only for asynchronous workflow. The C-STORE, N-ACTION and N-EVENT-REPORT will be handled in a separate association.

Normal Flow of Events:
1. The external DICOM node set up storage commit request connection and negotiates communication parameters with the Xcelera server.
2. After the connection is setup, the external DICOM node sends a storage commit request for the data, where the responsibility has to be taken over by the Xcelera server.
3. The Xcelera server responds to the external DICOM node that the request is correctly received.
4. The external DICOM node will close the connection.

When the data is correctly archived (archived and verified):
1. The Xcelera server set up storage commit response connection and negotiates communication parameters with the external DICOM node that made the request.
2. It could also response when it is only present on the repository (configuration option).
3. After the connection is setup, the Xcelera server sends the storage commit response, for the request it received, to the external DICOM node.
4. The Xcelera server will close the connection.

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.8.4.2.3.1.   Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-EVENT-REPORT-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

The Storage Commitment AE accepts all contexts in the intersection of the proposed and acceptable Presentation Context. This means that the Storage Commitment AE will accept multiple proposed Presentation Contexts with the same SOP Class but different Transfer Syntaxes, so there will be no checks for duplicate Presentation Contexts.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Reply Time-out	The association is released. Continues with waiting for storage commitment.
Association Time-out SCU	The association is released. Continues with waiting for storage commitment.
Association aborted	Continues with waiting for storage commitment.

Exceptions:

1. Not correctly archived within the verify delay + 8 hours, Xcelera responds with a failure.

2. All instances in the request have to be correctly archived, when one of them fails, the response will be reported with failure. Within the verify delay + 8 hours, Xcelera responds with a failure.

3. If no agreement between the two parties can be reached concerning (DICOM) communication parameters the connection will be closed and no data transfer will take place. Xcelera will retry 72 hours to send a response.

4. Xcelera will close the connection if no data is received within 2 minutes after the setup.

5. If a network error occurs during set up of a connection or during data transfer, this is reported. Xcelera will abort the connection and data transfer will not be completed.

6. If an error occurs on Xcelera during data transfer, Xcelera will notify the external DICOM node of this problem and after that close the connection. Xcelera reports an error.

7. If an error occurs on the external DICOM node during data transfer, this causes the connection to be aborted. Xcelera reports an error.

4.3.   Network Interfaces

4.3.1.   Physical Network Interfaces

The System provides only DICOM V3.0 TCP/IP Network Communication Support as defined in PS 3.8 of the standard.
TCP/IP is the only protocol stack supported.
Supported physical medium include:
IEEE 802.3-1995, 10BASE-T
IEEE 802.3-1995, 100BASE-TX (Fast Ethernet)
IEEE 802.3, 1000BASE-X (Fiber Optic Gigabit Ethernet).

The TCP/IP Stack as supported by the underlying Operating System.
The API is the WinSock 2 interface as supported by the underlying Operating System.

4.3.2.   Additional Protocols

Xcelera operates according to DICOM protocols, in the application layer of standardized communications networks. From this perspective the system supports a number of protocol stacks and physical network media. The system supports DICOM protocols on top of the TCP/IP version 4.

A Point-to-Point Protocol (PPP) Connection over dial-up line in the same network is possible.

4.4.   Configuration

Any implementation's DICOM conformance may be dependent upon configuration, which takes place at the time of installation. Issues concerning configuration are addressed in this section.

4.4.1.   AE Title/Presentation Address Mapping

An important installation issue is the translation from AE title to presentation address. How this is to be performed is described here.

In Xcelera the local Network and Media AE titles as well as the IP Address and the TCP listen port associated with these AE are configurable. The different AE's in Xcelera can be configured to use the same AE title.

 Xcelera only accepts associations of AE Titles that are configured in Xcelera.

 Due to variety of network configurations that exist worldwide, no performance guaranties can be given with respect to the time it takes to complete the execution of a job.

4.4.1.1.   Local AE Titles

The local AE title mapping and configuration are specified as:

Table 187: AE Title configuration table

Application Entity	Default AE Title	Default TCP/IP Port

Parameter	Configurable	Default Value
General Parameters		
Max PDU Receive Size	No	28 Kbytes
Max PDU Send Size	No	28 Kbytes
Time-out for completion of a TCP/IP connect request (Low-level timeout).	No	60 seconds
Time-out awaiting a Response to a DIMSE Request (Low-level timeout).	No	60 seconds

Parameter	Configurable	Default Value
Time-out for waiting for data between TCP/IP-packets (Low-level timeout).	No	60 seconds
Storage Parameters		
Storage SCU time-out waiting for a response to a C-STORE RQ	No	60 seconds
Time out for reception	No	2 minutes
Maximum number of simultaneously initiated Associations by the Storage AE	No	10
Supported Transfer Syntaxes (separately configurable for each remote AE	No	
Query/Retrieve Parameters (SCU and SCP)		
Maximum PDU size	No	28 Kbytes
Maximum Number of simultaneous Associations (SCU)	No	1 (C-ECHO), 5 (C-STORE), 5 (C-FIND), 1 (Printer), 1 (Archiving)

Q/R best case query response time (SCP)	No	2 seconds
Q/R worst case query response time (SCP)	No	10 seconds
Storage Commitment Specific Parameters		
Maximum time to wait for cases to be archived	Yes	Maximum 8 hours
Maximum number of times for retrying sending a response – with one hours interval	Yes	Maximum 72 times
Print Parameters		
Maximum number of simultaneous Associations	No	1
Maximum numbers of connected printers	No	5

Additional configuration parameters such as hardware options for e.g. a printer are specified as well.

5. Media Interchange

5.1. Implementation model

The implementation model identifies the DICOM Application Entities for Media in specific implementation and relates the Application Entities to Real-World Activities.

5.1.1. Application Data Flow Diagram

As part of the implementation model, an application data flow diagram is included. This diagram represents all of the Application Entities present in an implementation and graphically depicts the relationship of the AE's use of DICOM to Real-World Activities.
Figure 27: Application Data Flow Diagram

Note: DICOM FSU for CD and DVD as Media is not supported.

5.1.2. Functional Definitions of AE's

The Media AE in an Xcelera supports the following functions for CD-R, DVD and MOD:
 - Read the DICOMDIR File from the medium (representing the directory of the DICOM File(s) as recorded on the medium). This information may be displayed as an ordered list of icon images and, if present, with pertinent identifying information (patient name, etc.).
 - Read the selected instances from the medium and displays it on the monitor of the View Station. This information is displayed as an ordered list of frames of the selected image or as a dynamic review of the selected image.

And for CD-R, DVD:
 - Initialize the medium.
 - Write a DICOM File-set onto the medium.
 - Create a DICOMDIR File.
 - Extend the DICOM File-set and update the DICOMDIR File accordingly. (DICOM Media Storage Service Class).

Note: It is not possible to finalize the DVDs from Xcelera. Because of this the studies written on DVD by Xcelera can only be read by Xcelera.

5.1.3. Sequencing of Real World Activities

A Real World Activity of the Media AE is: The user selects a set of object to write these to the CD/DVD. Then the CD/DVD will be created with the selected objects. Once the CD/DVD has been created, the user can read this CD/DVD on the Xcelera or for transport to another device for reading.
Figure 28: (Real World) Activity - Media.

Another Real World Activity of the Media AE is: A CD/DVD from another system Xcelera or previously created CD/DVD can be read by the Xcelera. The Xcelera cannot append (FSU) to this created CD/DVD.
After data is written to CD/DVD, the CD/DVD is finalized automatically by Xcelera; the finalized CD/DVD can now be read on every CD/DVD reader.

A description of supported Application Profiles of that Media is described in the next table.

5.2.　AE Specifications

This section in the DICOM Conformance Statement specifies a set of Media Application Entities.

5.2.1.　Media AE Media - Specification

If applicable, this section contains a description of sequencing of Real-World Activities that the AE's require.

Depending on the study size, the viewer can write one or more complete studies to one or more CD's. Furthermore one viewer can review and upload:

- Multi-patient CDs and DVDs;
- Multi-study CDs and DVDs;
- Multi-CD studies.

The supported Application Profiles, their Roles and the Service Class (SC) options, all defined in DICOM terminology, are listed in next table.

5.2.1.1.   File Meta Information for the Media AE

The Application Entity title is registered in the DICOM File Meta Information header and is supported by the CD/DVD-writer (CD write option) acting only as FSC.

Table 192: File Meta Information for the Media AE

Implementation Class UID	1.3.46.670589.16.14.4.1.1

5.2.1.2.   Real-World Activities

The AE specification contains a description of the Real-World Activities, which invoke the particular AE.

5.2.1.2.1.   RWA - Read File-set

This Media Application Entity has a File-set Reader functionality which is described here.

For the Real World Activity Read File-set (DICOM Reading), the Media AE will act as an FSR using the Interchange option when reading the directory of the medium and when reading the requested images.

5.2.1.2.1.1.   Media Storage Application Profile

The table below gives an overview of the supported Application Profiles.

Table 193: Supported Application Profiles

* The supported MOD (FSR) Application Profiles include all Application Profiles where MOD* is MOD12, MOD23, MOD128, MOD230, MOD540, or MOD650.

5.2.1.2.1.1.1.   Options

Not applicable.

5.2.1.2.2.   RWA - Create File-set

This Media Application Entity has a File-set Creator functionality which is described here.

For the Real World Activities DICOM Recording the Media AE will write the SOP instances as provided by the RWA to the record able DICOM medium and a corresponding DICOMDIR is created.

5.2.1.2.2.1.   Media Storage Application Profile

See table below for an overview of the support of the Application Profiles.

During the copy of "PLACED" data of a DSR study on Xcelera to CD/DVD Media, following options are available as the export parameter that will apply to all DSR studies:
- Export As: "DICOM" (default) and
- Compression: "Loop" and
- Compression: "Still".
Both compression values are always "RLE".

6. Support of Character Sets

Any support for character sets in Network and Media services is described here.

Table 197: Supported DICOM Character Sets

Character Set Description	Defined Term	ESC Sequence	ISO Registration Number	Code Element	Character Set
Latin alphabet No. 1	ISO 2022 IR 100	ESC 02/08 04/02	ISO-IR 6	G0	ISO 646

		ESC 02/09 04/09	ISO-IR 13	G1	JIS X 0201: Katakana
Japanese	ISO 2022 IR 159	-	ISO-IR 159	G0	JIS X 0212: Supplementary Kanji set
		-	-	-	-
Japanese	ISO 2022 IR 87	-	ISO-IR 87	G0	JIS X 0208: Kanji
		-	-	-	-
Latin alphabet No. 1	ISO_IR 100	-	ISO-IR 6	G0	ISO 646
		-	ISO-IR 100	G1	Supplementary set of ISO 8859

Notes:
If the internally stored character group has been updated using any Kanji character, this PN attribute will always be exported as "Ideographic" component group.

A DICOM Value Representation of type PN, containing Japanese characters can exists of three component groups in the format:
<Single byte character>=<Ideographic character>=<Phonetic character>
Each component group is separated by the equal delimiter "=".

Note that Xcelera is LEVEL 2 transparent, but not if using patients data containing Japanese characters.

The behavior of the Xcelera during DICOM data import as SCP
When Xcelera imports DICOM data with PN type attributes with the above three component groups, then Xcelera uses the <Single byte character> component group for storage into the internal database.

In the case the <Single byte character> component group is absent; Xcelera uses the <Ideographic character> component group for storage into the internal database.
In the case both the <Single byte character> and the <Ideographic character> component groups are absent, Xcelera uses the <phonetic character> component group for storage into the internal database.

The behavior of Xcelera during DICOM data export as SCU
When Xcelera exports DICOM data, it uses the internally stored character group while exporting the PN type attributes.

That means that if the <Single byte character> component group is internally saved, Xcelera only uses this component group during export and the other two component groups are not exported.

And if the <Ideographic character> group is internally saved, then that group is used for export and the other two component groups are not exported.
And if the <Phonetic character> group is internally saved, then that group is used for export and the other two component groups are not exported.

7. Security

7.1. Security Profiles

All kind of Security Profiles are described below.

7.1.1. Security use Profiles

Not applicable

7.1.2. Security Transport Connection Profiles

Not applicable

7.1.3. Digital Signature Profiles

Not applicable

7.1.4. Media Storage Security Profiles

7.1.5. Attribute Confidentiality Profiles

No instances of the encrypted attributes data set are created. No transfer syntaxes are supported for encoding/decoding of encrypted attributes data sets.

The table below lists the attributes for anonymization (De-Identification) within a patient record. The terms used to describe the replacement value are listed below:

Empty: The attribute value is left empty (zero length).
User editable: The user can enter or edit the value for an attribute manually.
User selectable: The user can select a predefined list of values for an attribute.
System: The attribute value will be changed automatically by the system. Not configurable.
As is: The attribute value will not be changed. The text field for the attribute is grayed out.
Fixed value: The attribute value is set according a predefined list of values set by the system administrator.
Free: The attribute value gets the user-entered value. The system administrator can set a default value or, for gender, can select a value from the list.

8. Annexes of application "Cath Analysis Package (CAAS2000)"

8.1. IOD Contents

8.1.1. Created SOP Instance

This section specifies each IOD created by this application.

Notes:

SOP classes created by CAAS2000 for Xcelera are encoded with transfer syntax DICOM Implicit VR Little Endian (1.2.840.10008.1.2). No private tags are included in the derived objects so no loss of information.

Structured Reporting is supported by this version of CAAS2000 but this functionality is disabled for Xcelera.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS	The module is always present
CONDITIONAL	The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS	The attribute is always present with a value
EMPTY	The attribute is always present without any value (attribute sent zero length)
VNAP	The attribute is always present and its Value is Not Always Present (attribute sent zero length if no value is present)
ANAP	The attribute is present under specified condition – if present then it will always have a value
ANAPCV	The attribute is present under specified condition – if present then its Value is Not Always Present (attribute sent zero length if condition applies and no value is present)
ANAPEV	The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO	The attribute value is generated automatically
CONFIG	The attribute value source is a configurable parameter
COPY	The attribute value source is another SOP instance
FIXED	The attribute value is hard-coded in the application
IMPLICIT	The attribute value source is a user-implicit setting
MPPS	The attribute value is the same as that use for Modality Performed Procedure Step
MWL	The attribute value source is a Modality Worklist
USER	The attribute value source is explicit user input

X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2

Notes:

The SOP classes mentioned above are supported by CAAS2000 for Xcelera R3.2L1 with transfer syntaxes DICOM Implicit VR Little Endian (1.2.840.10008.1.2), DICOM Explicit VR Little Endian (1.2.840.10008.1.2.1) and DICOM Explicit JPEG Lossless Image Compression (1.2.840.10008.1.2.4.70).

Pixel Intensity Relationship (0028,1040) = "DRM" or "SQRT" (e.g. GE Innova) are supported by CAAS2000 for Xcelera R3.2L1 additionally to the values "LIN", "LOG" and "DISP".

Matrix size Rows (0028,0010) and Columns (0028,0011) with a minimum of 8 pixels and a maximum of 2048 pixels are supported by CAAS2000 for Xcelera R3.2L1.

9.1.1. Created SOP Instance

This section specifies each IOD created by this application.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS	The module is always present
CONDITIONAL	The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS	The attribute is always present with a value
EMPTY	The attribute is always present without any value (attribute sent zero length)
VNAP	The attribute is always present and its Value is Not Always Present (attribute sent zero length if no value is present)
ANAP	The attribute is present under specified condition – if present then it will always have a value
ANAPCV	The attribute is present under specified condition – if present then its Value is Not Always Present (attribute sent zero length if condition applies and no value is present)
ANAPEV	The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO	The attribute value is generated automatically
CONFIG	The attribute value source is a configurable parameter
COPY	The attribute value source is another SOP instance
FIXED	The attribute value is hard-coded in the application
IMPLICIT	The attribute value source is a user-implicit setting
MPPS	The attribute value is the same as that use for Modality Performed Procedure Step
MWL	The attribute value source is a Modality Worklist
USER	The attribute value source is explicit user input

10.1. IOD Contents

10.1.1. Created SOP Instance

This section specifies each IOD created by this application.

Note:

The SOP classes created by AutoQuant for Xcelera R3.2L1 are encoded with transfer syntax DICOM Explicit VR Little Endian (1.2.840.10008.1.2.1) only. Transfer syntax DICOM RLE Lossless (1.2.840.10008.1.2.5) is offered for creation but non-functional in this build.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

13. Annexes of application "ViewForum"

13.1. IOD Contents

13.1.1. Created SOP Instance

The created DICOM SOP classes will be described in the next sections.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS	The module is always present
CONDITIONAL	The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS	The attribute is always present with a value
EMPTY	The attribute is always present without any value (attribute sent zero length)
VNAP	The attribute is always present and its Value is Not Always Present (attribute sent zero length if no value is present)
ANAP	The attribute is present under specified condition – if present then it will always have a value
ANAPCV	The attribute is present under specified condition – if present then its Value is Not Always Present (attribute sent zero length if condition applies and no value is present)
ANAPEV	The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO	The attribute value is generated automatically
CONFIG	The attribute value source is a configurable parameter
COPY	The attribute value source is another SOP instance
FIXED	The attribute value is hard-coded in the application
IMPLICIT	The attribute value source is a user-implicit setting
MPPS	The attribute value is the same as that use for Modality Performed Procedure Step
MWL	The attribute value source is a Modality Worklist
USER	The attribute value source is explicit user input
