1. DICOM Conformance Statement Overview

Q-Station 3.2 is interoperable with systems providing a DICOM interface. Clinical users can select patient image data for basic viewing, post processing, data transfer. Q-Station 3.2 stores medical data in its local storage. The local storage has a limited capacity and is not intended for long term archiving purposes.

3.2. Audience

This Conformance Statement is intended for:

- (Potential) customers
- System integrators of medical equipment
- Marketing staff interested in system functionality
- Software designers implementing DICOM interfaces

It is assumed that the reader is familiar with the DICOM standard.

3.3. Remarks

The DICOM Conformance Statement is contained in chapter 4 through 8 and follows the contents and structuring requirements of DICOM PS 3.2.

This DICOM Conformance Statement by itself does not guarantee successful interoperability of Philips equipment with non-Philips equipment. The user (or user's agent) should be aware of the following issues:

- **Interoperability**
  Interoperability refers to the ability of application functions, distributed over two or more systems, to work successfully together. The integration of medical devices into an IT environment may require application functions that are not specified within the scope of DICOM. Consequently, using only the information provided by this Conformance Statement does not guarantee interoperability of Philips equipment with non-Philips equipment.
  It is the user's responsibility to analyze thoroughly the application requirements and to specify a solution that integrates Philips equipment with non-Philips equipment.

- **Validation**
  Philips equipment has been carefully tested to assure that the actual implementation of the DICOM interface corresponds with this Conformance Statement.
  Where Philips equipment is linked to non-Philips equipment, the first step is to compare the relevant Conformance Statements. If the Conformance Statements indicate that successful information exchange should be possible, additional validation tests will be necessary to ensure the functionality, performance, accuracy and stability of image and image related data. It is the responsibility of the user (or user's agent) to specify the appropriate test suite and to carry out the additional validation tests.

- **New versions of the DICOM Standard**
  The DICOM Standard will evolve in future to meet the user's growing requirements and to incorporate new features and technologies. Philips is actively involved in this evolution and plans to adapt its equipment to future versions of the DICOM Standard. In order to do so, Philips reserves the right to make changes to its products or to discontinue its delivery. The user

should ensure that any non-Philips provider linking to Philips equipment also adapts to future versions of the DICOM Standard. If not, the incorporation of DICOM enhancements into Philips equipment may lead to loss of connectivity (in case of networking) and incompatibility (in case of media).

4. Networking

This section contains the networking related services (vs. the media related ones).

4.1. Implementation model

The implementation model consists of three sections:
- The application data flow diagram, specifying the relationship between the Application Entities and the "external world" or Real-World Activities,
- A functional description of each Application Entity, and
- The sequencing constraints among them.

4.1.1. Application Data Flow

The Q-Station 3.2 implements one network application entity: the Q-Station 3.2 Network AE.

The following figure shows the networking application data flow as a functional overview of the application entity. On the left the local Real-World Activities are presented, whereas on the right the remote Real-World Activities are presented.
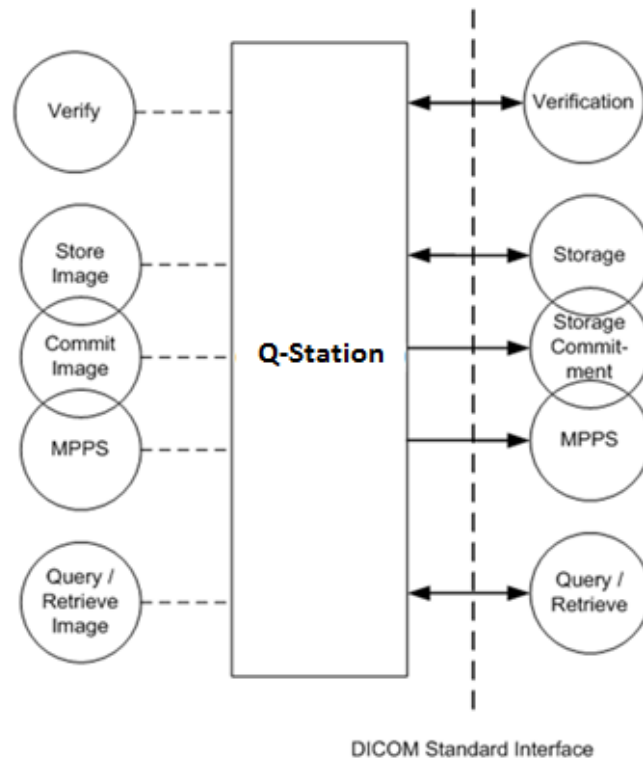

Figure 1: Application Data Flow Diagram

The Q-Station 3.2 incorporates the following functionality:
- Import images to a local database;
- Export (and commit) images from the local database to a network DICOM node;
- Send Modality Performed Procedure Step (MPPS) messages to a network DICOM node;
- Query and retrieve images from a remote DICOM node;

4.1.2. Functional Definition of AE's

This section contains a functional definition for each individual local Application Entity.

4.1.2.1. Functional Definition of Q-Station Network AE

Q-Station 3.2 incorporates the following functionality:

- The Q-Station 3.2 Network AE can verify application level communication by using the Verification service both as SCU and SCP (Verify).
- The Q-Station 3.2 Network AE can store images by using the Storage service both as SCU and SCP (Store Image).
- The Q-Station 3.2 Network AE can commit images by using the Storage Commitment service as SCU (Commit Image).
- The Q-Station 3.2 Network AE can find and move images by using the Query/Retrieve service as SCU (Query/Retrieve Image).
- The Q-Station 3.2 Network AE can send MPPS N-Create and N-Set messages at the opening and closing of a study once configured.

4.2.   AE Specifications

This section in the DICOM Conformance Statement is a set of Application Entity specifications. There are as many of these subsections as there are different AE's in the implementation.

4.2.1.   Q-Station Network AE

Detail of this specific Application Entity is specified in this section.

4.2.1.1.   SOP Classes

This Application Entity provides Standard Conformance to the following SOP Classes.

4.2.1.2.   Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

4.2.1.2.1.   General

The DICOM standard application context is specified below.

Table 6: DICOM Application Context

Description	Value
Application Context Name	1.2.840.10008.3.1.1.1

4.2.1.2.2.   Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified here.

Table 7: Number of associations as an Association Initiator for this AE

Description	Value
Maximum number of simultaneous associations	Configurable

Table 8: Number of associations as an Association Acceptor for this AE

Description	Value
Maximum number of simultaneous associations	Configurable

4.2.1.2.3.   Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

The Q-Station 3.2 Network AE does not support asynchronous operations and will not perform asynchronous window negotiation. The only exceptions are for reports from Storage Commitment..

The behavior of the AE on receiving an Association abort is summarized in the next table.

Table 13: Association Abort Handling

Source	Reason/Diagnosis	Behavior when received	Sent when
0 - DICOM UL service-user (initiated abort)	0- reason-not-specified	When received, the Q-Station 3.2 terminates the connection with the following log: Association ABORTED by peer (0: ABORT_SOURCE_dul_user, 0: ABORT_REASON_not_specified).	• N-EVENT-REPORT received with status FAILURE. • Abort is issued to an executing job that utilizes this network connection (ExportNetwork/ ArchiveNetwork/DICOMCopy/DICOMMove) • Any other problem than ones specified for Q-Station 3.2 Network AE SCU in the rows below. (Examples: Problem while decoding the DICOM stream, SCU was unable to send the Response to SCP, Error writing to SCU stream).
2 - DICOM UL service-provider (initiated abort)	0 - reason-not-specified	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 0: ABORT_REASON_not_specified)	• There are problems in SCU/SCP role negotiation. • Any other problem than ones specified for Q-Station 3.2 Network AE SCU in the rows below. (Example: Problem while decoding the DICOM stream).
	1 - unrecognized-PDU	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 1: ABORT_REASON_unrecognized_pdu).	An unrecognized PDU type is received[4].
	2 - unexpected-PDU	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 2: ABORT_REASON_unexpected_pdu).	The received PDU type is not expected in the current state of connection[5].
	4 - unrecognized-PDU-parameter	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 4: ABORT_REASON_unrecognized_pdu_parameter).	An unrecognized Associate PDU item is received[1].
	5 - unexpected-PDU-parameter	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 5: ABORT_REASON_unexpected_pdu_parameter).	• One of the Associate PDU items is received more than once[2]. • One of the Associate PDU items is received unexpectedly[2].

Source	Reason/Diagnosis	Behavior when received	Sent when
	6 - invalid-PDU-parameter-value	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 6: ABORT_REASON_invalid_pdu_parameter).	• One of the Associate PDU items is received more than once[3]. • One of the Associate PDU items is not received[3]. • There is mismatch in the application context names between the SCU and the SCP. • Illegal Asynchronous Operations Window invoke value is received. • Illegal Asynchronous Operations Window perform value is received. • Unknown presentation context id is received. • Unknown abstract syntax is received. • The length or the format of a received PDU item is invalid.

4.2.1.3.3.   (Real-World) Activity – FIND as SCU

4.2.1.3.3.1.   Description and Sequencing of Activities

The operator on Q-Station 3.2 can query a remote database by selecting the "Remote Data" location from the data panel. A query form will appear with all available query matching keys that can be used to filter the request to the remote system. When the operator clicks on the "OK" button in the Query form, a C-FIND-RQ message is send to the remote system:

4.2.1.3.4.　(Real-World) Activity – MOVE as SCU

4.2.1.3.4.1.　Description and Sequencing of Activities

The Move activity as SCU (Move Remote Images) involves the retrieval of images on a remote system by moving matching studies/series from the remote database to the local database or to another remote database.

During a move operation, the operator may copy the selected studies/series from a remote database to the local database or to another remote database.

The Q-Station 3.2 Network AE initiates for each copy request an association to the selected remote DICOM node and uses this node to send the Retrieve (C-MOVE) request (and receives the associated responses). For successfully operation both systems must be configured to make a Retrieve (C-MOVE) possible.

The association is released after the final Retrieve (C-MOVE) response for the related request has been received (no more pending).
Figure 7: Data Flow Diagram – MOVE as SCU

4.2.1.3.4.2.　Proposed Presentation Contexts

The presentation contexts are defined in the next table.

4.2.1.3.4.3.   SOP Specific Conformance for Patient Root QR Information Model - MOVE SOP Class

From the query responses received from a remote database, the Q-Station user can select:

- A single study
- Multiple studies
- A single series
- Multiple series.

Via the "copy" to local database action on Q-Station 3.2 a C-MOVE-RQ message on study or series level will be sent to the remote system.
Q-Station 3.2 supports both the study level and series level request operation. (patient level and image level move is not supported)
In case multiple studies are selected for retrieve, for each study a separate job (=association) is created with 1 C-MOVE-RQ.
For multiple series retrieve, 1 job (association) is created with a C-MOVE-RQ for each requested series.
The Q-Station 3.2 user may cancel the C-MOVE service by issuing a C-MOVE-CANCEL request at any time during the processing of the C-MOVE.

4.2.1.3.5. (Real-World) Activity – Image Export

4.2.1.3.5.1. Description and Sequencing of Activities

The Q-Station 3.2 implements the Storage service class as part of the Q-Station 3.2 to store selected images at an archive or other storage SCP. All actual selected images are exported using one and the same association. The Q-Station 3.2 waits for synchronous report until, after a configurable time passed, it will release the association.

4.2.1.3.5.3.   SOP Specific Conformance for Storage SOP Classes

The export process in Q-Station can be configured to remove the "native" data elements from the objects (=private data from Philips Ultrasound modalities).
Q-Station 3.2 can create attributes that were not in the original received image.
The object supplier shall be responsible for the presence of DICOM UIDs.

Following remarks hold for the standard DICOM SOP Classes:

- The Q-Station 3.2 supports the following Photometric Interpretations for non-compressed images:
  • MONOCHROME1,
  • MONOCHROME2,
  • PALETTE COLOR,
  • RGB, YBR_FULL,
  • YBR_FULL_422,
  • YBR_PARTIAL_422,
  • YBR_ICT,
  • YBR_RCT.

- The Q-Station 3.2 can convert Transfer Syntaxes from internal to external values. So Q-Station 3.2 can convert from internally JPEG compressed/uncompressed pixel data to external JPEG compressed/uncompressed pixel data.

- JPEG Lossless (NH-FOP) compresses all bits denoted by the attribute DICOM_BITS_ALLOCATED. Therefore, any overlays encoded in the pixel data are also encoded and decoded.

- In case of both source (internal) and target compressed pixel data, decompression of the source pixel data and compression to the target pixel data only takes place in the following cases:
1) The source and target compression formats are different; or:
2) The source pixel data is multi-frame without a BOT.

- The BOT in compressed pixel data is filled if:
1) This is explicitly configured; or:
2) Group length attributes are configured.

4.2.1.3.5.3.1.   Dataset Specific Conformance for C-STORE-RQ
Detail regarding the Dataset Specific response behavior will be reported in this section.

This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 33: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful stored	Progress of the export job is updated and connection is retained for the next store. If the store of all the SOP instances is completed then the connection is released.
Failure	A7xx	Refused: Out of Resources	Error is logged and the export job fails. Connection is released.
	A9xx	Error: Data Set does not match SOP Class	Error is logged and the export job fails. Connection is released.
	Cxxx	Error: cannot understand	Error is logged and the export job fails. Connection is released.
Warning	B000	Coercion of Data Elements	Warning is logged and the export job continues. Connection is not released.
	B007	Data Set does not match SOP Class	Warning is logged and the export job continues. Connection is not released.
	B006	Elements Discarded	Warning is logged and the export job continues. Connection is not released.

4.2.1.3.6.   (Real-World) Activity – Storage Commitment Push Model AS SCU

4.2.1.3.6.1.   Description and Sequencing of Activities

It accepts a storage commitment notification (N-EVENT-REPORT) from systems that send them.

Q-Station 3.2 supports both synchronous and asynchronous storage commitment. When synchronous storage commitment is configured and the event report is not received within the configured time-out interval, the Network AE will release the association and the storage commitment will commence as Asynchronous.

The Figure below shows the sequence diagram for the synchronous storage commitment operation.
Figure 9: Data Flow Diagram - Commit Image (synchronous)

Via configuration in Q-Station 3.2 the archive can be requested to send the Storage Commitment reply (N-EVENT-REPORT-RQ) in a new association. After the N-ACTION-RSP is received from the archive, Q-Station 3.2 will close the association. The archive has to open a new association to Q-Station 3.2 to send the N-EVENT-REPORT message.

The Figure below shows the sequence diagram for the Asynchronous storage commitment operation.
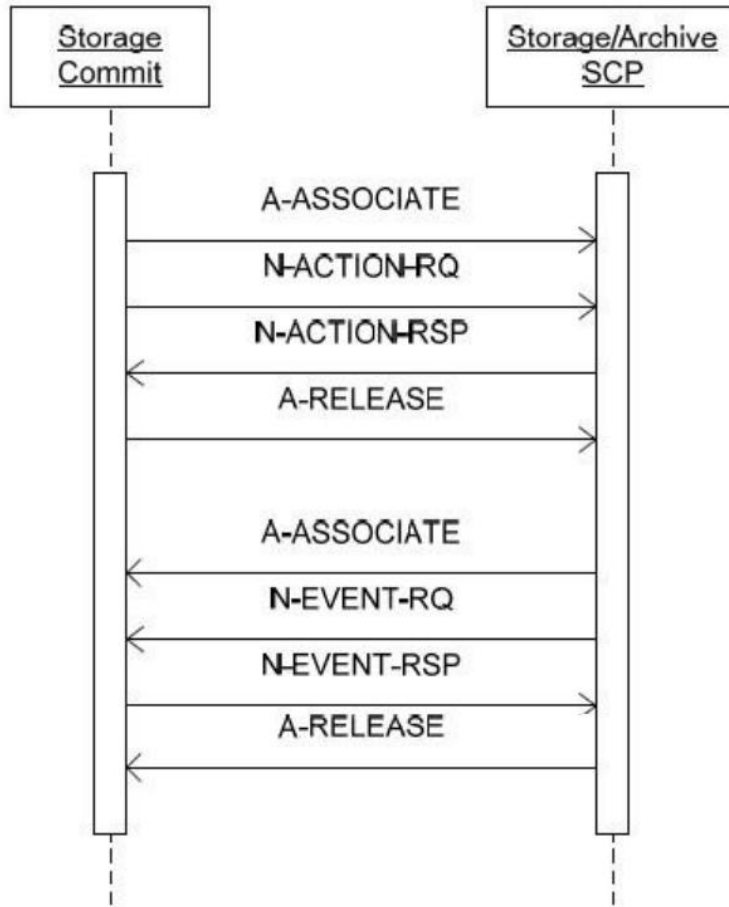

Figure 10: Data Flow Diagram - Commit Image (asynchronous)

4.2.1.3.6.2.   Proposed Presentation Contexts

The presentation contexts are defined in the next table.

4.2.1.3.6.3.   SOP Specific Conformance for Storage Commitment Push Model SOP Class

Q-Station 3.2 conforms to the standard Storage Commitment model.

4.2.1.3.6.3.1.   Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-ACTION

Detail regarding the Dataset Specific response behavior will be reported in this section.

Table 35: Storage Commitment Attribute for N-ACTION-RQ

Table 36: Status Response for N-ACTION-RQ

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation: Operation complete	The association will be released according to the configured value for "Storage Commit Max Reply Waiting Time"
Failure	xxxx	Commitment request failed	

4.2.1.3.6.3.2.   Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-EVENT-REPORT

On receiving the storage commitment result, Q-Station 3.2 will update internally the archive status of the exported study.
This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 37: Status Response for N-EVENT-REPORT

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Operation complete	

4.2.1.4.   Association Acceptance Policy

The Q-Station 3.2 Network AE accepts associations for the following purposes:

- To allow remote applications to verify application level communication.
- To allow remote applications to store images in the Q-Station 3.2 database.
- To allow remote applications to send storage commit reports to Q-Station 3.2 as SCU.

The Q-Station 3.2 Network AE rejects association requests from unknown applications, i.e. applications that offer an unknown "calling AE title". An application is known if and only if it is defined per configuration of the Q-Station 3.2 system. The Q-Station 3.2 Network AE also rejects association requests from applications that do not address the Q-Station 3.2 Network AE, i.e. that offer a wrong "called AE title". The Q-Station 3.2 AE title is defined during configuration of Q-Station 3.2.

The Application Entity may reject Association attempts as shown in the table below.

<div align="center">Table 38: Association Reject Reasons</div>

Result	Source	Reason/Diagnosis	Behavior
1 - rejected permanent	1 - DICOM UL service-user	1 - no-reason-given	Association is not established due to any problem other than that specified for Q-Station 3.2 SCP in the rows below. (Example: Problem while decoding the DICOM stream).
		2 - application-context-name-not-supported	An application context name other than 1.2.840.10008.3.1.1.1 is requested by the SCU during association.
		3 - calling-AE-title-not-recognized	The configuration does not contain a repository having the Calling AE Title as per the association request; There is a problem in configuration (related to composing the configuration from the SCU and the SCP configuration).
		7 - called-AE-title-not-recognized	The called AE Title in the association request does not match the AE Title as per the configuration.
	2 - DICOM UL service provider (ACSE related function)	1 - no-reason-given	Not used.
		2 - protocol-version-not-supported	Not used.
	3 - DICOM UL service provider (Presentation related function)	1 - temporary-congestion	Not used.
		2 - local-limit-exceeded	Not used.

The behavior of the AE for sending an Association abort is summarized in next table.

<div align="center">**Table 39: Association Abort Policies**</div>

Source	Reason/Diagnosis	Behavior when received	Sent when
0 - DICOM UL service-user (initiated abort)	0 - reason-not-specified	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (0: ABORT_SOURCE_dul_user, 0: ABORT_REASON_not_specified).	Association times out due to inactivity; Any other problem than ones specified for Q-Station 3.2 SCP in the rows below. (Examples: Problem while decoding the DICOM stream, Invalid request, Echo/Find/Move/N-Action SCP was unable to send the Response to SCU, Error writing to SCU stream).
2 - DICOM UL service-provider (initiated abort)	0 - reason-not-specified	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 0: ABORT_REASON_not_specified)	Import fails (Import SCP Performer returns fail status)
	1 - unrecognized-PDU	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 1: ABORT_REASON_unrecognized_pdu).	An unrecognized PDU type is received[4].
	2 - unexpected-PDU	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 2: ABORT_REASON_unexpected_pdu).	The received PDU type is not expected in the current state of connection[5].
	4 - unrecognized-PDU parameter	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 4: ABORT_REASON _unrecognized_pdu_parameter).	An unrecognized Associate PDU item is received[1].
	5 - unexpected-PDU parameter	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 5: ABORT_REASON _unexpected_pdu_parameter).	One of the Associate PDU items is received more than once[2]; One of the Associate PDU items is received unexpectedly[2].
	6 - invalid-PDU-parameter value	When received, the Q-Station 3.2 Network AE terminates the connection with the following log: Association ABORTED by peer (2: ABORT_SOURCE_dul_provider, 6: ABORT_REASON _invalid_pdu_parameter).	One of the Associate PDU items is received more than once[3]; One of the Associate PDU items is not received[3]; Empty Called AE Title String (space-only) is received; Empty Calling AE Title String (space-only) is received; Unknown abstract syntax is received; The length or the format of the received PDU item is invalid.

4.2.1.4.1.   (Real-World) Activity – Verification as SCP

4.2.1.4.1.1.   Description and Sequencing of Activities

The Q-Station 3.2 accepts Associations from configured systems that wish to verify application level communication using the C-ECHO command.
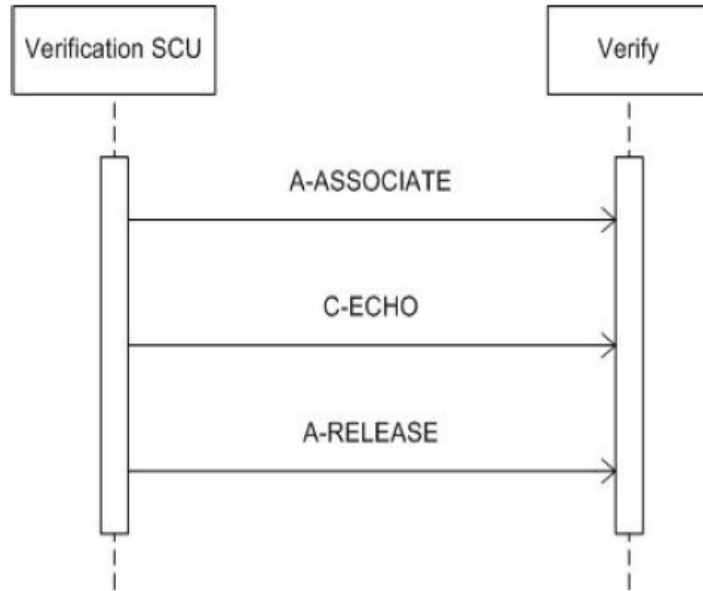

Figure 11: Data Flow Diagram – Verify

4.2.1.4.1.2.   Accepted Presentation Contexts

The presentation contexts are defined in the next table.

Table 40: Acceptable Presentation Contexts for (Real-World) Activity – Verification as SCP

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name List	UID List		
Verification SOP Class	1.2.840.10008.1.1	Explicit VR Big Endian	1.2.840.10008.1.2.2	SCP	None
		Implicit VR Little Endian	1.2.840.10008.1.2		
		Explicit VR Little Endian	1.2.840.10008.1.2.1		

The Q-Station 3.2 accepts all contexts in the intersection of the proposed and acceptable Presentation Contexts. This means that multiple proposed presentation contexts with the same SOP class but different transfer syntaxes are accepted by the Q-Station 3.2 as far as those transfer syntaxes are part of the acceptable transfer syntaxes. There is no check for duplicate contexts and these are therefore accepted.

4.2.1.4.1.3.   SOP Specific Conformance for Verification SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

4.2.1.4.1.3.1.   Dataset Specific Conformance for Verification C-ECHO SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 41: Status Response

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Confirmation	Confirm the verification request.

4.2.1.4.2.   (Real-World) Activity – Image Import

4.2.1.4.2.1.   Description and Sequencing of Activities

The Q-Station 3.2 accepts associations from configured systems that wish to store images in the Q-Station 3.2 database using the C-STORE command.

Note: ILE is preferred transfer syntax.

The Q-Station 3.2 accepts all contexts in the intersection of the proposed and acceptable Presentation Contexts. This means that multiple proposed presentation contexts with the same SOP class but different transfer syntaxes are accepted by the Q-Station 3.2 as far as those transfer syntaxes are part of the acceptable transfer syntaxes. There is no check for duplicate contexts and these are therefore accepted.

4.2.1.4.2.3.   SOP Specific Conformance for Storage SOP Classes

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Q-Station 3.2 will only accept associations from configured systems. The Q-Station 3.2 may provide level 2 (full) conformances, depending on the implemented database.

Remarks:
- Pixel data will be stored in configurable transfer syntax. This implies that transfer syntax conversions might take place during import. Compressed pixel data is always decompressed and afterwards converted to the "configurable transfer syntax".

- A non-empty BOT may be present in imported JPEG encoded pixel data.

- Value Representation 'UN' (Unknown) is supported, and shall be used for any attributes not known to Q-Station 3.2 and received per implicit transfer (ILE).

- Images must contain the minimum set of attributes prescribed by DICOM. Otherwise the default behavior is that the image is rejected and the association aborted.

4.2.1.4.2.3.1.   Dataset Specific Conformance for C-STORE-RSP

Detail regarding the Dataset Specific response behavior will be reported in this section.

This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

Table 43: Status Response C-STORE

Service Status	Error Code	Further Meaning	Behavior
Success	0000	Successful command	Successful completion of the store request.
Failure	A700	Refused: out of resources	Not enough resources available to do a store.
	C000	Error: cannot understand	Any other exception generated during the store.

4.3. Network Interfaces

4.3.1. Physical Network Interfaces

The System provides only DICOM V3.0 TCP/IP Network Communication Support as defined in PS 3.8 of the standard.
TCP/IP is the only protocol stack supported.
Supported physical medium include:
IEEE 802.3-1995, 10BASE-T
IEEE 802.3-1995, 100BASE-TX (Fast Ethernet)
IEEE 802.3, 10/100/1000Mb/s Ethernet.

The TCP/IP Stack as supported by the underlying Operating System.
The API is the WinSock 2 interface as supported by the underlying Operating System.

4.3.2. Additional Protocols

No additional protocols are used.

4.4. Configuration

Any implementation's DICOM conformance may be dependent upon configuration, which takes place at the time of installation. Issues concerning configuration are addressed in this section.

4.4.1. AE Title/Presentation Address Mapping

An important installation issue is the translation from AE title to presentation address. How this is to be performed is described here.

4.4.1.1. Local AE Titles

The FieldService User Interface only allows one AE to be configured.

The following AE specific information must be available to configure a local AE:
- AE title.
- Hostname or IP address (or both). Use "localhost" (127.0.0.1) for the complete local system. If the AE should only be associated with a specific network adapter, don't specify the host name and use the IP address of this network adapter.
- Port number

4.4.1.2. Remote AE Title/Presentation Address Mapping

One or more remote AE's may be configured.

The following AE specific information must be available to configure a remote AE:
- AE title.
- Hostname or IP address (or both).
- Port number.

4.4.2. Parameters

The specification of important operational parameters, their default value and range (if configurable) are specified here.

Table 44: Configuration Parameters Table

5. Media Interchange

5.1. Implementation model

The implementation model identifies the DICOM Application Entities for Media in specific implementation and relates the Application Entities to Real-World Activities.

5.1.1. Application Data Flow Diagram

The Q-Station 3.2 implements one media application entity: the Q-Station 3.2.
Figure 13: Application Data Flow Diagram

5.1.2. Functional Definitions of AE's

The Q-Station 3.2 implements the following functions for DICOM media.

- Write a DICOM file-set onto the medium.
- Create a DICOMDIR file.
- Read the DICOMDIR file from the medium.
- Read selected images from the medium.

5.1.3. Sequencing of Real World Activities

Not applicable.

5.2. AE Specifications

This section in the DICOM Conformance Statement specifies a set of Media Application Entities.

5.2.1.   Q-Station 3.2 Media AE Media - Specification

This section contains general policies that apply to all of the Application Entities described in subsequent section.

The Q-Station 3.2 provides standard conformance to the DICOM interchange option of the media storage service class, and follows the specifications as defined in the DICOM standard – Media Storage and File Format for Data Interchange (PS 3.10) and Media Storage Application Profiles (PS 3.11).

The Q-Station 3.2 supports multi-patient and multi-session for CD-R media (both reading and writing). For one or more Application Profiles, the following table shows the Real-World Activities and the roles of each of these Real-World Activities.

Note:
Read File-set = Display Directory and Read Image
Create File-set = Write Image

Table 46: File Meta Information for the Q-Station 3.2 Media AE

Implementation Class UID	1.3.46.670589.14.9006.300
Implementation Version Name	MIP10.1Lx

5.2.1.2.   Real-World Activities

The AE specification contains a description of the Real-World Activities, which invoke the particular AE.

5.2.1.2.1.   RWA - Read File-set

This Media Application Entity has a File-set Reader functionality which is described here.

Display Directory
The Q-Station 3.2 will act as a FSR when reading the directory of the medium. This allows the System Integrator to see the results in an overview of the patients, studies, series and images.

The Q-Station 3.2 will not access DICOM media when either:
- Patient ID is absent; or
- Study Instance UID has no value; or
- Series Instance UID has no value.

Read Images

The Q-Station 3.2 will act as a FSR when reading all/selected images from DICOM media.

5.2.1.2.1.1.   Media Storage Application Profile

Refer to the table in section 5.2.1.

5.2.1.2.1.1.1.   Options

Not applicable.

5.2.1.2.2.   RWA - Create File-set

This Media Application Entity has a File-set Creater functionality which is described here.

Write Images

The Q-Station 3.2 acts as an FSC when writing DICOM objects onto DICOM media. The Q-Station 3.2 can also store private attributes.

When the Q-Station 3.2 has to write objects to DICOM media, it can encounter the following situation.

The objects were previously received via C-STORE operations. Some attributes in the received images have a zero-length value (type 2 attributes). However, the Application Profile specifies some of these attributes as type 1: they must have a value. In such cases the Q-Station 3.2 supplies a value for the following attributes (if necessary):
- Patient ID;
- Study ID;
- Series Number;
- Instance number;
- Study Date;
- Study Time.

The mechanism of generating a value for Patient ID is to create a new value (i.e. Study Instance UID) for each new study written to the medium, even if this study belongs to a patient recorded earlier.

Study ID is assigned the value of the first Requested Procedure ID (0040, 1001) encountered in the Request Attributes Sequence (0040, 0275).

5.2.1.2.2.1.   Media Storage Application Profile

Refer to the table in section 5.2.1.

5.2.1.2.2.1.1.   Options

Not applicable.

5.2.1.2.3.   RWA - Update File-set

This Media Application Entity has a File-set Updater functionality which is described here.

5.2.1.2.3.1.   Media Storage Application Profile

The Application Profile that is used by this Media Application Entity is specified in this section.

5.2.1.2.3.1.1.   Options

The options used in the Application Profile are specified in detail in this section.
If there are no options used in the Application Profile, this section may be omitted by writing "Not applicable".

5.3. Augmented and Private Application Profiles

This section is used for the description of Augmented and Private Application Profiles.

5.3.1. Augmented Application Profiles

Any Augmented Application Profiles used by the Application Entity are described in this section. The rules governing the structure of an Augmented Application Profile are also described.

5.3.1.1. Augmented Application Profile Descriptions

Each Augmented Application Profile has a section that describes the specific features of the Application Profile that make it augmented.

5.3.1.1.1. SOP Class Augmentations

Not applicable

5.3.1.1.2. Directory Augmentations

Instances of the private SOP classes may be written on the media. This requires a Directory Record Type (0004,1430) with the value "PRIVATE" and configuration of the required Private Record UID. This UID is used to define a non-standard type of Directory Record by reference to its position in a private extension to the DICOM Basic Directory IOD Information Model.

5.3.1.1.3. Other Augmentations

Not applicable.

5.3.2. Private Application Profiles

Not applicable.

5.4. Media Configuration

In the following table an overview is given of some important configuration attributes related to the DICOM behaviour of Q-Station 3.2.

As can be seen in the table above, Q-Station 3.2 supports all character sets currently defined by DICOM except for the multi-byte character sets without code extensions.

When an unsupported character set is received it shall be tried and decoded according the preferred character set.

Unsupported characters shall be displayed as "?".

7. Security

7.1. Security Profiles

The Q-Station 3.2 does not fully support DICOM security profiles. However, it does support security measures that will be used for secure authentication of a node and for the generation of audit records. The supported components for security measures by Q-Station 3.2 are:

 - Audit Trail Component

7.1.1. Audit Trail Component

The Audit Trail Component of Q-Station 3.2 allows security officers in an institution to audit activities, to detect non-compliant behavior in the enterprise, and to facilitate detection of improper creation, access, modification and deletion of Protected Health Information (PHI), where PHI data is considered as information records (Registration, Order, Study/Procedure, Reports and to a lesser degree Images), and not the flow of information between the systems.

The messages are created and sent to a syslog server according to the syslog protocol. The time that is used will be the local time of the system. The syslog server is an element of the Hospital infrastructure.

7.2. Association Level Security

Q-Station 3.2 accepts associations only from known applications or an application whose "calling AE Title" is defined in its configuration file. Q-Station 3.2 will reject association requests from unknown applications, i.e. applications that offer an unknown "calling AE title". An application entity (AE) is known if – and only if – it is defined during configuration of Q-Station 3.2, which is done via the configuration application.

7.3. Application Level Security

If configured, Q-Station 3.2 supports security measures for:
 - generation of audit trail records;
 - access control and user authentication.

8. Annexes of application "Q-Station"

8.1. IOD Contents

8.1.1. Created SOP Instance

This section specifies each IOD created by this application.

Note: Q-Station 3.2 does not support Presentation State SOP class for import and export.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:
ALWAYS　　　　　The module is always present
CONDITIONAL　　The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:
ALWAYS　　　The attribute is always present with a value
EMPTY　　　 The attribute is always present without any value (attribute sent zero length)
VNAP　　　　The attribute is always present and its Value is Not Always Present
　　　　　　　(attribute sent zero length if no value is present)
ANAP　　　　The attribute is present under specified condition – if present then it will always have a value
ANAPCV　　 The attribute is present under specified condition – if present then its Value is Not Always Present
　　　　　　　(attribute sent zero length if condition applies and no value is present)
ANAPEV　　 The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:
AUTO　　　　The attribute value is generated automatically
CONFIG　　　The attribute value source is a configurable parameter
COPY　　　　The attribute value source is another SOP instance
FIXED　　　　The attribute value is hard-coded in the application
IMPLICIT　　 The attribute value source is a user-implicit setting
MPPS　　　　The attribute value is the same as that use for Modality Performed Procedure Step
MWL　　　　 The attribute value source is a Modality Worklist
USER　　　　 The attribute value source is explicit user input

8.1.2.   Usage of Attributes from Received IOD

The Q-Station 3.2 only accepts all valid DICOM IOD's specified in this document. Some SOP Classes will not be viewable because they are application dependant.

8.1.3.   Coerced/Modified fields

Upon export of composite instances a de-normalization can take place by assembling data from the various entities in the hierarchy. The selection of the attributes takes place based upon what is present in the Q-Station 3.2 at the initiation of the export. A description is given in the following subsections per instance level.

Patient

If the patient ID attribute is absent during instance import (has no value – zero-length) the following mapping will take place.
1. When a Patient ID is absent and one of Patient's Name/Patient's Birth Date is absent then a new UID is generated for Patient ID. Otherwise Patient ID is generated by appending "EMPTYPatientID_" + <Patient's Name> + "_" + <Patient's Birth Date>. It will be ensured that all instances belonging to a particular study will get the same Patient ID.

2. For Storage SCP, when two or more SOP Instances have the same Patient ID and different values for Patient's Name/Patient's Birth Date, then a new Patient ID is created by appending "!" + <UID> to the Patient ID. The original Patient ID is added to the Other Patient IDs.

Study

During import, the value of Study ID attribute is determined as follows:
1. Retrieved from the composite image.
2. If not present in the composite image, Study ID is assigned the value of the first Requested Procedure ID (0040,1001) encountered

in the Request Attributes Sequence (0040,0275) in the composite image.
3. Otherwise Study ID remains empty.

During Export, in the absence of Study attribute values, the Examination attributes will be taken as a best guess for the following Study attributes.

<div align="center">Table 85: Mapping of Study Attributes</div>

Examination Attribute	Value	DICOM Attribute
Study Date (0008,0020)	Has value	Study date (0008,0020) is sent out
	Not present or has no value	Study date (0008,0020) is filled with Performed Procedure Step Start Date (0040,0244)
Study Time (0008,0030)	Has value	Study Time (0008,0030) is sent out
	Not present or has no value	Study Time (0008,0030) is filled with Performed Procedure Step Start Time (0040,0245)

This implies that upon export of each Examination, within the same Study, different values for these attributes may be sent out. The receiving station, e.g. a PACS system, will apply its own rules for guaranteeing consistency of its own database.

Examination
If all of the Performed Procedure Step attributes in the following table are missing from the composite image, then the mapping is as specified.

<div align="center">Table 86: Mapping of Examination attributes</div>

Performed Procedure Step Attribute	Tag	Composite Image Attribute	Tag

Private Draft Report SOP Class (Media only)	1.3.46.670589.2.8.1.1

8.5.1. Standard Extended/Specialized/Private SOP Instance

Q-Station 3.2 supports the Private SOP Class, 1.3.46.670589.2.8.1.1, which is used to store a Draft Reports to DICOM Media. It is not used for network storage as only Approved reports may be exported via DICOM, and those are only in Encapsulated PDF.

8.6. Private Transfer Syntaxes

Q-Station 3.2 does not support any private transfer syntaxes.

9. Annexes of application "QLAB"

9.1. IOD Contents

9.1.1.   Created SOP Instance

This section specifies each IOD created by this application.

Note: Q-Station 3.2 does not support Presentation State SOP class for import and export.

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS   The module is always present
CONDITIONAL   The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS   The attribute is always present with a value
EMPTY   The attribute is always present without any value (attribute sent zero length)
VNAP   The attribute is always present and its Value is Not Always Present
                  (attribute sent zero length if no value is present)
ANAP   The attribute is present under specified condition – if present then it will always have a value
ANAPCV   The attribute is present under specified condition – if present then its Value is Not Always Present
                  (attribute sent zero length if condition applies and no value is present)
ANAPEV   The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO   The attribute value is generated automatically
CONFIG   The attribute value source is a configurable parameter
COPY   The attribute value source is another SOP instance
FIXED   The attribute value is hard-coded in the application
IMPLICIT   The attribute value source is a user-implicit setting
MPPS   The attribute value is the same as that use for Modality Performed Procedure Step
MWL   The attribute value source is a Modality Worklist
USER   The attribute value source is explicit user input

9.1.2.   Usage of Attributes from Received IOD

The Q-Station 3.2 only accepts all valid DICOM IOD's specified in this document. Some SOP Classes will not be viewable because they are application dependant.

9.1.3.   Coerced/Modified fields

Upon export of composite instances a de-normalization can take place by assembling data from the various entities in the hierarchy. The selection of the attributes takes place based upon what is present in the Q-Station 3.2 at the initiation of the export. A description is given in the following subsections per instance level.

Patient

If the patient ID attribute is absent during instance import (has no value – zero-length) the following mapping will take place.
1. When a Patient ID is absent and one of Patient's Name/Patient's Birth Date is absent then a new UID is generated for Patient ID. Otherwise Patient ID is generated by appending "EMPTYPatientID_" + <Patient's Name> + "_" + <Patient's Birth Date>. It will be ensured that all instances belonging to a particular study will get the same Patient ID.

2. For Storage SCP, when two or more SOP Instances have the same Patient ID and different values for Patient's Name/Patient's Birth Date, then a new Patient ID is created by appending "!" + <UID> to the Patient ID. The original Patient ID is added to the Other Patient IDs.

Study

During import, the value of Study ID attribute is determined as follows:
1. Retrieved from the composite image.
2. If not present in the composite image, Study ID is assigned the value of the first Requested Procedure ID (0040,1001) encountered in the Request Attributes Sequence (0040,0275) in the composite image.
3. Otherwise Study ID remains empty.

During Export, in the absence of Study attribute values, the Examination attributes will be taken as a best guess for the following Study attributes.

Table 115: Mapping of Study Attributes

Examination Attribute	Value	DICOM Attribute
Study Date (0008,0020)	Has value	Study date (0008,0020) is sent out
	Not present or has no value	Study date (0008,0020) is filled with Performed Procedure Step Start Date (0040,0244)
Study Time (0008,0030)	Has value	Study Time (0008,0030) is sent out
	Not present or has no value	Study Time (0008,0030) is filled with Performed Procedure Step Start Time (0040,0245)

This implies that upon export of each Examination, within the same Study, different values for these attributes may be sent out. The receiving station, e.g. a PACS system, will apply its own rules for guaranteeing consistency of its own database.

Examination
If all of the Performed Procedure Step attributes in the following table are missing from the composite image, then the mapping is as specified.

Table 116: Mapping of Examination attributes

Performed Procedure Step Attribute	Tag	Composite Image Attribute	Tag
Performed Procedure Step Start Date	(0040,0244)	Study Date	(0008,0020)
