Basic Color Print Management	Yes	No

The Philips EPIQ Ultrasound system implements the necessary DICOM® services to download worklists from an information system, store Images and Structured Reports to a network storage device, commit previously stored US images, store Images and Structured Reports to CD, DVD, or removable USB Media storage devices, print to a networked DICOM printer device, receive previously stored ultrasound and other modality images, and inform the information system about the work actually done.

* Purchasable option “Netlink DICOM 3.0”. DICOM Printing does not require an option.

** Requires option “Ultrasound Query Retrieve”.

The SOP Classes are categorized as shown in Table 1.2:

3 INTRODUCTION

3.1 AUDIENCE

This document is intended for hospital staff, health care system integrators, software designers or implementers. It is assumed that the reader has a working understanding of DICOM.

3.2 REMARKS

DICOM, by itself, does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication between Philips Medical Systems and other vendors' Medical equipment. The Conformance Statement should be read and understood in conjunction with the DICOM Standard [DICOM]. However, by itself it is not guaranteed to ensure the desired interoperability and successful interconnectivity.

The user should be aware of the following important issues:

- The comparison of different conformance statements is the first step towards assessing interconnectivity between Philips Medical Systems and non - Philips Medical Systems equipment.
- Test procedures should be defined to validate the desired level of connectivity.
- The DICOM standard will evolve to meet the users' future requirements. Philips Medical Systems is actively involved in developing the standard further and therefore reserves the right to make changes to its products or to discontinue its delivery.
- This DICOM Conformance Statement reports the implementation of one ultrasound system, EPIQ 1.0.x.x

3.3 DEFINITIONS, TERMS AND ABBREVIATIONS

Definitions, terms and abbreviations used in this document are defined within the different parts of the DICOM standard.

Abbreviations and terms are as follows:

AE	Application Entity
AET	Application Entity Title
ASCE	Association Control Service Element
CD-R	Compact Disk Recordable
CID	Context ID. Reference to a DICOM code "context group" defined in DICOM PS3.16
CSE	Customer Service Engineer
DICOM	Digital Imaging and Communications in Medicine
FSC	File-Set Creator
FSU	File-Set Updater
FSR	File-Set Reader
GSDf	Grayscale Standard Display Function
HIPAA	United States "Healthcare Insurance Portability and Accountability Act of 1996"
IOD	Information Object Definition

ISO	International Standard Organization
LOINC	Logical Observation Identifiers Names and Codes
MPPS	Modality Performed Procedure Step
MWL	Modality Worklist
R	Required Key Attribute
O	Optional Key Attribute
PDIR	Patient Directory screen on EPIQ
PDU	Protocol Data Unit
PDE	Patient Data Entry screen on EPIQ
PS3.x	Reference to part 'x' the DICOM 3.0 Standard
PS3	Philips Support Connect. It is the primary interface on EPIQ for configuring DICOM services. It is reached by pressing the "Support" key on the EPIQ control panel.
SCU	Service Class User (DICOM client)
SCP	Service Class Provider (DICOM server)
SOP	Service-Object Pair
SNOMED	Systematized Nomenclature of Medicine (SRT)
SPS	Scheduled Procedure Step
SR	Structured Report
TID	Template ID. Reference to a DICOM Structured Report "template" defined in DICOM PS3.16
U	Unique Key Attribute
US	Ultrasound
USB	Universal Serial Bus

The following upper-case abbreviations represent specific Attributes. Refer to PS3.3 Section 8 for a description:

CV	Code Value (0008,0100)
CSD	Coding Scheme Designator (0008,0102)
CM	Code Meaning (0008,0104)
CSV	Coding Scheme Version (0008,0103)

4 NETWORKING

4.1 IMPLEMENTATION MODEL

4.1.1 Application Data Flow

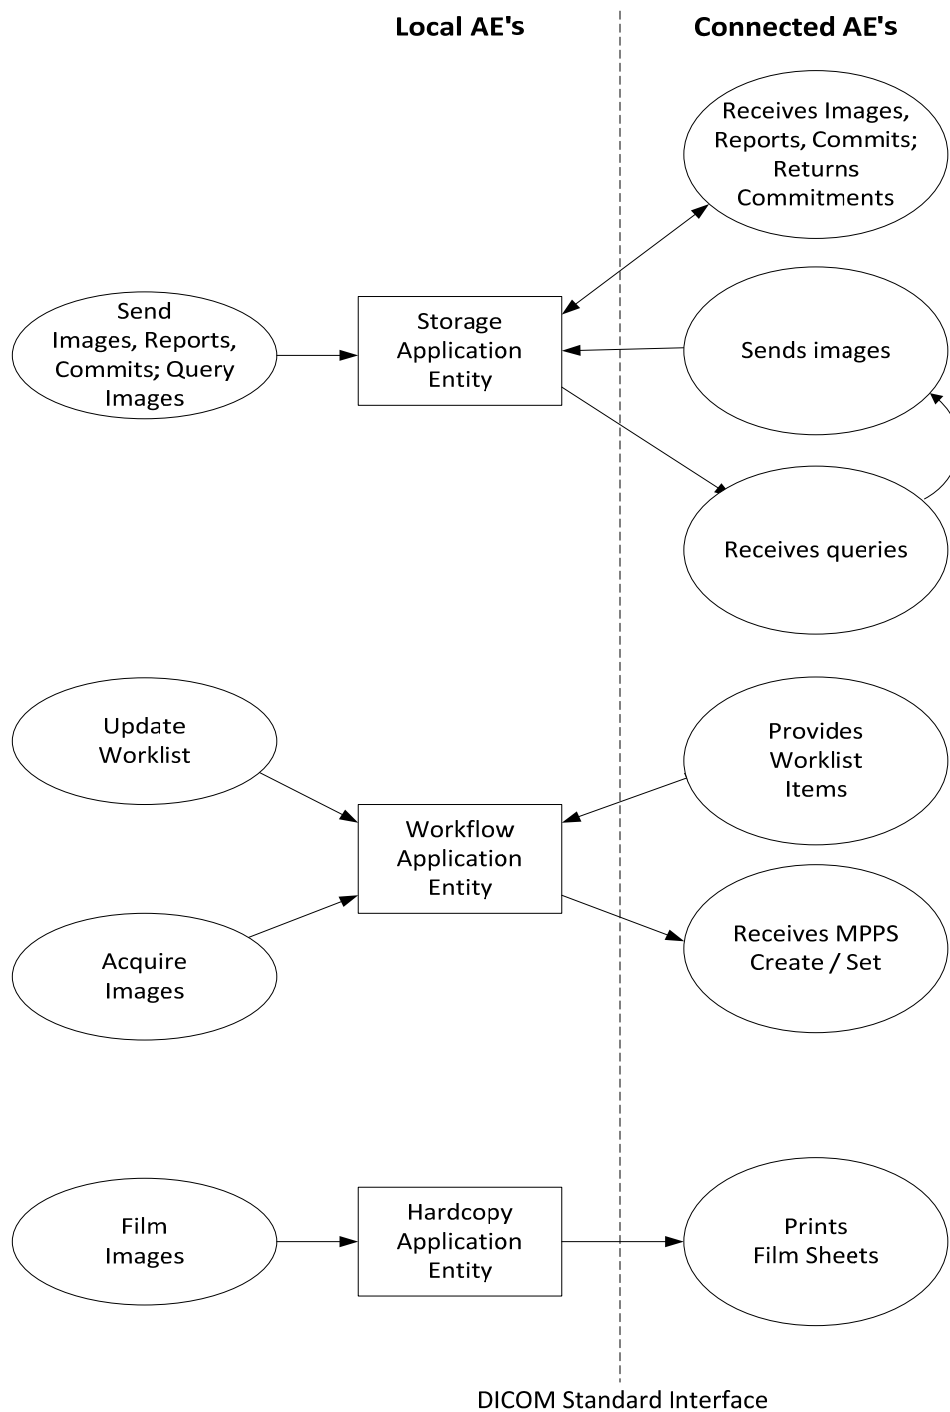

Figure 1: APPLICATION DATA FLOW DIAGRAM

- The **Storage Application Entity** sends **Images** and **Structured Reports** to a remote AE. It is associated with the local real-world activity “Acquire” on EPIQ. Sending of images may occur automatically when configured to do so, either “After Each Print/Acquire” or “At End of Exam” with or without “Send on Demand”, with separate export destination configuration of each acquisition control. In addition, exam data may be sent manually upon request of the user.

If configured for After Each Print/Acquire, images are transferred immediately after acquisition and Structured Reports are transferred at the end of the exam. The association remains open for 10 minutes, and then closes. If configured for At End Exam, images and Structured Reports are transferred when the exam is ended.

An exam may be sent manually by user selection from the Patient Directory (PDIR), including exams that have been imported or retrieved into EPIQ from other sources. Further, individually-selected images acquired on EPIQ may be sent manually from image review.

If the remote AE is configured for Storage Commitment, the Storage AE will request Storage Commitment after End Exam. If a commitment response is successfully obtained, this information is recorded in the local database, placing a checkmark in the commit portion of the Patient Directory display and signaling the Auto-delete function that the exam qualifies for deletion.

There are several available mechanisms for importing images acquired on other devices, including Ultrasound images and images of other modalities:

- When configured, images may be retrieved using the Query/Retrieve service
- DICOM images may be imported directly from local media
- DICOM images may be pushed onto EPIQ by another Storage SCU device without being initiated by the EPIQ user

Send on Demand allows for sending acquired images and/or Structured Report during an active exam without ending the exam or in-progress MPPS. Print images will be sent without requiring a full print page to be filled. Send on Demand is invoked by pressing an icon located at the bottom center of the system display after acquiring the first image of the study.

- The **Workflow Application Entity** receives Modality Worklist (MWL) information from and sends Modality Performed Procedure Step (MPPS) information to remote AEs. It is associated with the local real-world activities “Update Worklist”, “Patient Search” and “Acquire Images”.

When either the “Update Worklist” or “Patient Search” local real-world activity is performed, the Workflow Application Entity queries a remote AE for worklist items and provides the set of worklist items matching the query request. “Update Worklist” is performed as a result of an operator request or can be performed automatically at specific time intervals. “Patient Search” is manually initiated.

Modality Performed Procedure Steps are created and updated with the following real-world events:

- MPPS N-Create, Status = IN PROGRESS:
 - Acquisition of images using “Print”, “Capture” or “Acquire” will result in automated creation of an MPPS Instance managed by a remote AE.
- MPPS N-Set, Status = COMPLETE
 - Completion of the MPPS is performed as the result of an operator action of ending the exam.
- MPPS N-Set, Status = DISCONTINUED
 - “Cancel Exam” causes the “Discontinued” status to be sent. A “Paused” exam does not initiate an MPPS event.

Images and SRs may be Appended to an ended exam. There are two fundamental methods to perform append:

- Append from Patient Directory
 - Select an Ended study from the Patient Directory.
 - Select the study; choose “Append.” Two options are available:

- “Add” (if less than 24 hours old), allows images to be added to the original Study, using the same Study Instance UID, and a new Series Instance UID. If more than 24 hours old, only “Create” will be available.
 - “Create”, which will create a new Study Instance UID.
 - Study Status will be “Ended”
 - The choice of which option to use is dependent on the behavior of the SCP to which the data is sent.
 - Append from Image Review
 - Select the exam from the Patient Directory. Select “Display Exams” to review images.
 - Select an image for full-screen display
 - A message is displayed at the bottom of the screen, “Creating a new exam for append...”
 - Study Status of new exam in the Patient Directory will be “Appended” after exiting review.
 - Default behavior is selectable via a configuration screen for Append from Image Review – Create Study Instance UID:
 - For Exams appended by creating the image from Image Review and changing visualization of the existing images, for example, changing chroma map, added images would have the same Acquisition DateTime value of the original images in which the images were acquired. This is not the case for append from Patient Directory, which creates completely new images with the current date and time.
 - Study Date on the Report page refers to the date of an exam in which the evidences were acquired. This is exported as DICOM Study Date. This includes all Appended and Non-Appended exams.
 - For Exams appended from Image Review, the Report footer has the statement “Appended: “followed by the date in which the exam is started for Appending/Appended exams from Image Review.
 - SR Vendors shall refer to DICOM Study Date to determine the date of the original exam in which the evidences were acquired and refer to DICOM Performed Procedure Step Start Date for the date of Appended exam.
- The **Hardcopy Application Entity** prints images on a remote AE (Printer or print server). It is associated with the local real-world activity “Acquire” depending on configuration. The user action creates a print queue containing one or more virtual film sheets composed from images acquired by the user. It creates and sends fully rendered pages already containing the user’s selected formatting choices. Only a single image object per sheet is sent to the printer. This print object is rather large compared to sending individual Image Box objects to the printer. If the user has both a BW and Color DICOM printer configured and selected, and is using “After Each Print/Capture (or Acquire)”, the images containing no Color Flow or Chroma data will be sent to the BW printer, all others will be sent to the Color printer.

Exam data is sent to all selected Store, Print and Workflow destinations simultaneously in accordance with system configuration of “After Each Print/Capture (or Acquire)” or “At End of Exam”; if Send on Demand had been used images and updated Structured Reports since last Send on Demand are sent at End Exam. Writing to media is always at the end of the exam.

4.1.2 Functional Definition of AEs

4.1.2.1 Functional Definition of Storage Application Entity

The existence of a Network Store queue with associated network destination will activate the Storage AE. An association request is sent to the destination AE and upon successful negotiation of a Presentation Context, the image transfer is started. If the association cannot be opened, the related queue is set to a “Failed” state, indicated by a Red dot on the Network Icon, and can be restarted by the user via the queue management interface. The user may need to cancel the queue, and then restart manually. Multiframe (loop) objects will be transferred first, then single frames when configured for End of Exam. When “Image Export Format” is selected as “monochrome”, single frame images that have no Color Flow Doppler or Chroma maps applied, will export as grayscale using Monochrome2 Photometric

Interpretation. Single frame images that include Color Flow Doppler will be sent as RGB. If the non-active region of a 2D/scrolling image has a chroma map, it will be sent as monochrome.

The Storage AE is also responsible for accepting images for storage in EPIQ, though any of the following mechanisms:

- Import from removable media
- Retrieve using the Query/Retrieve service
- Unsolicited push from a Storage SCU to EPIQ acting as a Storage SCP. This mechanism requires that the Storage SCU to have previously been configured as an acceptable DICOM Storage Device.

4.1.2.2 Functional Definition of Workflow Application Entity

Update Worklist attempts to download a Modality Worklist from a Modality Worklist SCP with studies matching the search criteria. Default query criteria are Modality of US (ultrasound) and Scheduled Procedure Step Start Date of the current date. Additional changes to Modality Worklist search include customizing to search for a different AE Title, Station Name, System Location and Custom Modality. If the Workflow AE establishes an Association to a remote AE, it will transfer all matching worklist items via the open Association. The results of a successful Worklist Update will overwrite the data in the Worklist display. Specific queries for Patient Last Name, Patient ID, Accession #, Exam Date or Date Range, and Requested Procedure ID may also be performed using the Patient Search.

There is no queue management for Modality Worklist.

Note: A wildcard (broad) patient query can be performed by entering a * in the Patient Name field.

The Workflow AE performs the creation of a Modality Performed Procedure Step (MPPS) instance automatically when the first image of a study is acquired. MPPS message queues are listed along with Image and Structured Report queues in the Network status window.

The user may also change patient identification information while a MPPS is in progress. If this is done, the previous MPPS is discontinued and a new MPPS is created with the changed patient information. The Storage AE is informed, and if images acquired under the previous patient information have already been transferred (because Send After Each Print/Acquire or Send On Demand) the images are regenerated and sent again with updated patient information and new DICOM UID's.

4.1.2.3 Functional Definition of Hardcopy Application Entity

The existence of a print queue will activate the Hardcopy AE. An association is established with the printer(s) and the printer's status determined. If the printer is operating normally, the film sheets will be printed. If the printer is not operating normally, the print queue will set to a "Failed" state and can be restarted by the user via the queue management interface. In the case that a user has both a BW and a Color DICOM printer configured, during an exam with "After Each Print/Capture" selected, the images that contain color data, i.e., Color Flow Doppler or Chroma, will be sent to the Color printer only, and all other images sent only to the BW printer. There is an embedded retry mechanism that retries User Recoverable errors for up to 1 hour, waiting 20 seconds between attempts.

4.1.3 Sequencing of Real-World Activities

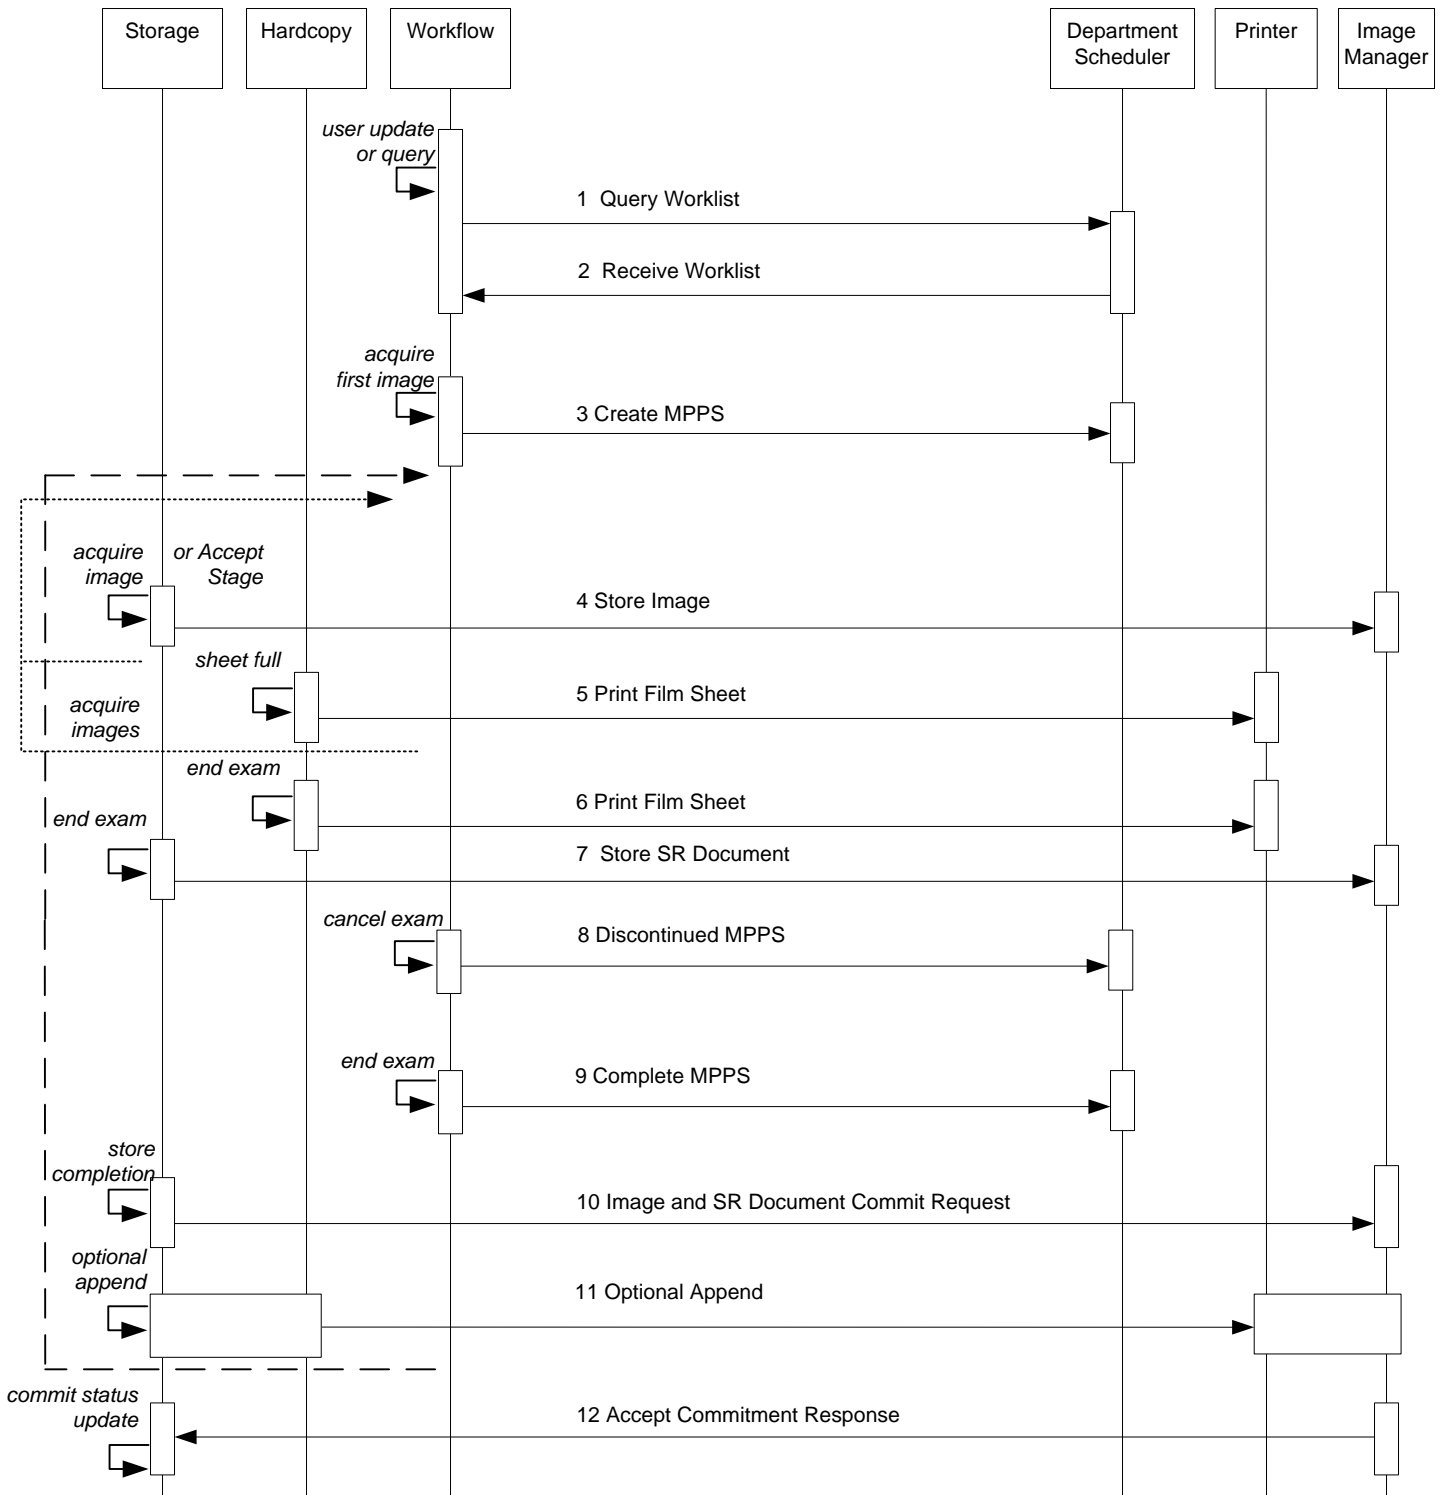

FIGURE 2A:
SEQUENCING CONSTRAINTS – CONFIGURED TO SEND AFTER EACH PRINT/ACQUIRE

Figures 2a and 2b illustrate normal scheduled workflow conditions.

Notes:

- Messages may slightly change order occasionally.
- All selected store, print and workflow devices are sent data during the exam when configured for “Send After Each Print/Capture” or at “At End of Exam.”
- Selecting a study from Review for export will send to all selected devices.

Other workflow situations (e.g. unscheduled procedure steps) will have other sequencing constraints. Printing or storage could equally take place after image acquisition. Printing could be omitted completely if no printer is connected or hardcopies are not required.

4.2.1.2 Association Establishment Policy

4.2.1.2.1 General

The DICOM standard application context name for DICOM 3.0 is always proposed:

**Table 4.2
DICOM APPLICATION CONTEXT FOR AE STORAGE**

Application Context Name	1.2.840.10008.3.1.1.1
--------------------------	-----------------------

4.2.1.2.2 Number of Associations

EPIQ initiates one Association at a time for each destination to which a transfer request is being processed in the active job queue list. Five storage destinations, 1 Structured Report storage destination, and 1 Storage Commitment destination may be selected simultaneously, but only one job will be active at a time, the other(s) remain pending until the active job is completed or failed.

**Table 4.3
NUMBER OF ASSOCIATIONS INITIATED FOR AE STORAGE**

Maximum number of simultaneous Associations	1
---	---

EPIQ accepts Associations for N-EVENT-REPORT notifications for the Storage Commitment Push Model SOP Class. EPIQ will also accept Associations for C-Store messages for receiving data in response to Query/Retrieve C-MOVE requests or unsolicited images from a Storage SCU sending images to EPIQ.

**Table 4.4
NUMBER OF ASSOCIATIONS ACCEPTED FOR AE STORAGE**

Maximum number of simultaneous Associations	5
---	---

4.2.1.2.3 Asynchronous Nature

EPIQ does not support asynchronous communication (multiple outstanding transactions over a single Association).

**Table 4.5
ASYNCHRONOUS NATURE AS A SCU FOR AE STORAGE**

Maximum number of outstanding asynchronous transactions	1
---	---

4.2.1.2.4 Implementation Identifying Information

The implementation information for this Application Entity is:

**Table 4.6
DICOM IMPLEMENTATION CLASS AND VERSION FOR AE STORAGE**

Implementation Class UID	1.3.46.670589.5.2.10
Implementation Version Name	MIP10.1RC2

4.2.1.3 Association Initiation Policy

4.2.1.3.1 Activity – Store Images and Structured Reports

4.2.1.3.1.1 Description and Sequencing of Activities

A user may select exams or individual images from Review and request them to be sent to multiple destinations (up to five). Reports may not be selected individually, but are sent when “End Exam” is pressed, and when an entire exam is selected for export from the Review Directory. Each object (single-frame image, multi-frame image, private presentation state, or structured report) is entered into the job queue. When the “Send After Each Print/Capture” option is active, the queue is serviced continuously during the exam. There is a default 10-minute timeout for “Send After Each,” after which the association is closed. Any additional images acquired during the exam will be sent on a subsequent association.

The Network Status icon reports the status of the job, Green is ok, Yellow is paused, and Red is failed. If the C-STORE response from the remote Application Entity contains a status other than Success, the Association is aborted and the related Job is switched to a failed state. It can be restarted any time by user interaction. When a system configured with selected network destinations is used without the network connected, it is considered in “Portable” mode. Each network status Icon will be Yellow with status of “Pending” for each study acquired while the network was not connected. Reconnecting the network cable will initiate transfer again.

If a device is configured for Storage Commitment service, the Storage AE will transmit a separate Storage Commitment N-ACTION request for images and one for the report, over two separate Associations. The Storage AE can only receive an N-EVENT-REPORT request in a separate subsequent association initiated by the SCP employing PDU 54H SCP/SCU Role Negotiation in the SCP’s Association Request. It cannot receive N-EVENT-REPORT request messages on the same association as the N-ACTION request.

Structured reports will contain all supported measurements and calculations created by EPIQ even if they are not selected for display in the on-system report. Measurements or calculations that are not supported for export are listed in Appendix A in the Mapping Tables for each report and indicated by “Not Mapped”

OB-GYN study types generate OB-GYN Ultrasound Procedure Reports, Vascular or Abdominal study measurements generate a VascularUltrasound Report, and the Adult Echo Study generates an Echocardiography Procedure Report. Two types of Pediatric Echo Reports are available depending on configuration: DICOM-standard Pediatric, Fetal, and Congenital Cardiac Ultrasound Report or Philips proprietary Pediatric Echo Report. Note that there may be more than one report instance per exam, so long as they are from different study types.

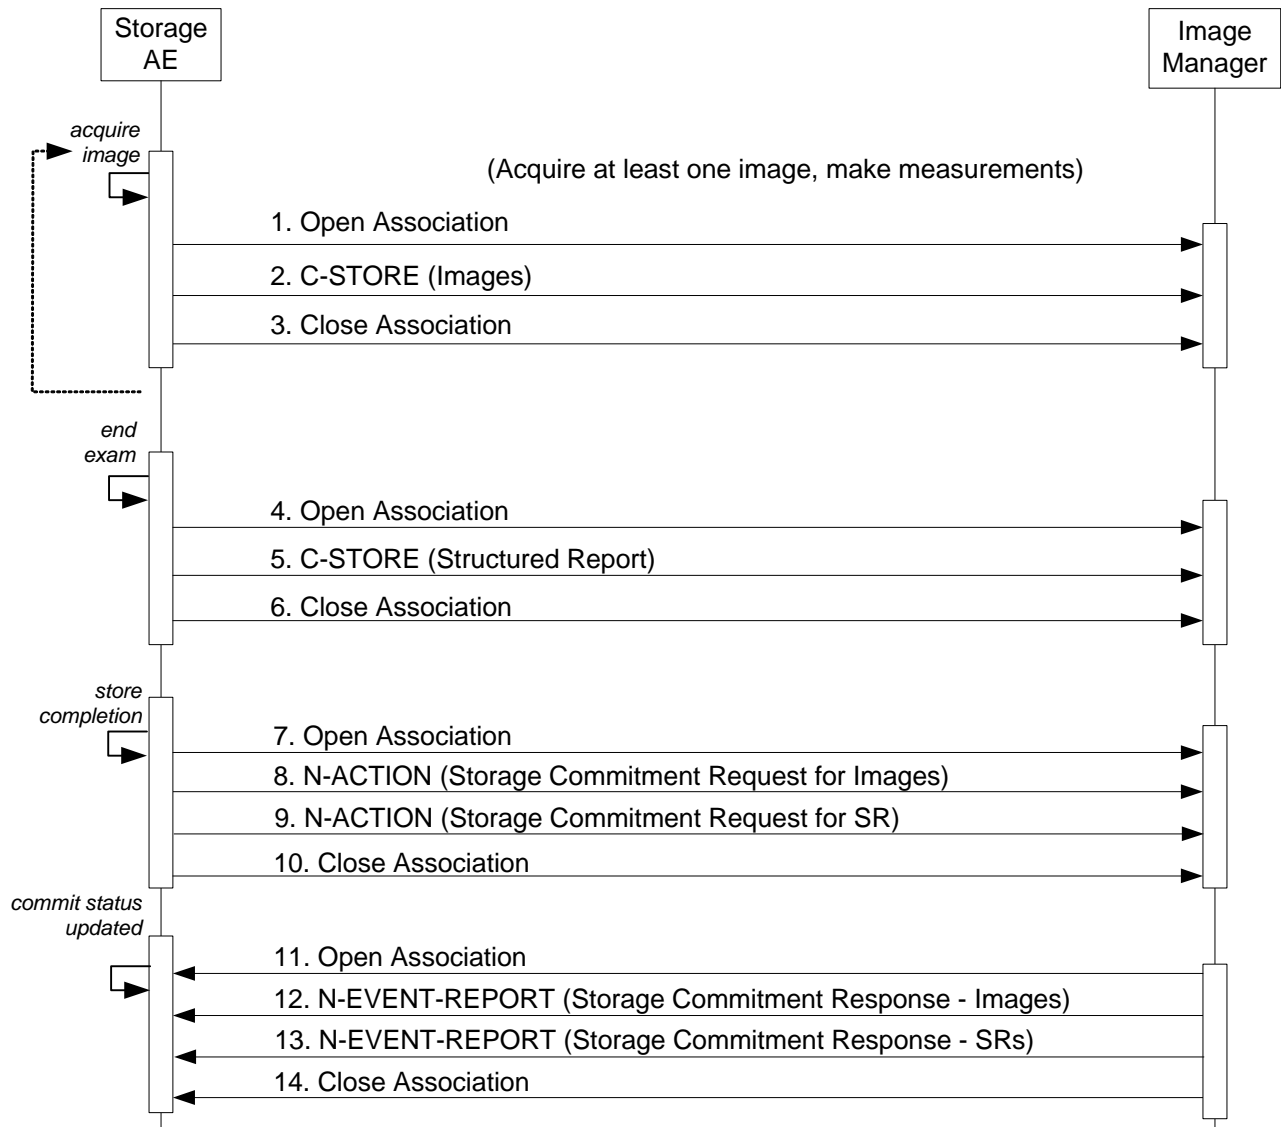

Figure 3

SEQUENCING OF ACTIVITY – SEND IMAGES AFTER EACH PRINT/ACQUIRE AND STRUCTURED REPORT

The sequence of interactions between the Storage AE and an Image Manager is illustrated in Figure 3 for the “Store” configuration option “Send After Each Print/Acquire”. If the “Send At End Exam” configuration option is selected, no C-STORE is sent at the Acquire Image event and instead all image C-STOREs are sent after end exam.

NOTES: Pausing an exam will close the current association. A new association will be created when resumed. Similar behavior when the association times out.

The N-EVENT-REPORT must be sent over a separate association initiated by the Image Manager (see Section 4.2.1.4.1 on Activity – Receive Storage Commitment Response).

4.2.1.3.1.2 Proposed Presentation Contexts

EPIQ is capable of proposing the Presentation Contexts shown in the following table:

* Loops will be YBR_FULL_422 unless “Uncompressed” is selected in setups, which will produce RGB or MONOCHROME2 depending on system setup and image content (if Color Doppler or Chroma) listed below.

** Intended for use only on QLAB and Xcelera workstations.

Presentation Contexts are proposed for each Storage device based on selected options. Storage Commitment N-Action Requests will only be sent to a device that is configured as the Storage Commitment server.

All Presentation Contexts are proposed for all Storage devices, unless the user selects “Implicit Little Endian Only” in the Advanced Configuration tab for the configured device. Then only Implicit Little Endian is negotiated for that device, provided the study contains no JPEG Lossy compressed loops

The Implicit Little Endian Only selection will override the Single Frame Compression setting, resulting in only uncompressed export.

Storage Commitment N-ACTION requests are only sent to the device that is configured as the Storage Commitment server. Storage Commitment always works in conjunction with a designated Storage SCP configured to receive storage of the objects to be committed.

4.2.1.3.1.3 SOP Specific Conformance

4.2.1.3.1.3.1 Image and Comprehensive Structured Report Storage SOP Classes

4.2.1.3.1.3.1.1 Storage (C-STORE)

All Image and Comprehensive Structured Report Storage SOP Classes supported by the Storage AE exhibit the same behavior, except where stated, and are described together in this section.

Table 4.8 describes C-Store response behavior.

**Table 4.8
STORAGE C-STORE RESPONSE STATUS HANDLING BEHAVIOR**

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The SCP successfully stored the SOP Instance. If all SOP Instances succeed, the job is marked as complete.
*	*	Any other status code.	The Association is aborted using A-ABORT and the transfer fails. The status is logged.

The behavior of Storage AE during communication failure is summarized in Table 4.9.

**Table 4.9
STORAGE COMMUNICATION FAILURE BEHAVIOR**

Exception	Behavior
Timeout	Same as Service Status “Refused” in Table 4.8 above.
Association aborted by the SCP or network layers	Same as Service Status “Refused” in Table 4.8 above.

A green dot on the Network Transfer Icon indicates a successful transfer or an active queue. A red dot indicates failure. By using the Queue Manager, the user can restart a failed transfer. Open the Queue Manager by clicking on the Network Transfer Icon. Select the failed transfer and click Retry

An Association that is interrupted due to a broken and reestablished network topology will automatically retry the connection 1 time after a 5 second delay before reporting a connection failure.

The contents of US Image, US Multiframe Storage and Comprehensive Structured Report Storage SOP Instances conform to the DICOM IOD definitions described in Section 8.1.

4.2.1.3.1.3.2 SOP Specific Conformance for Storage Commitment Push Model SOP Class

4.2.1.3.1.3.2.1 Storage Commitment Notifications (N-EVENT-REPORT)

The Storage AE will request storage commitment for the configured device. Storage Commitment is only requested automatically by the system at the end of an exam.

Table 4.10 summarizes the behavior of Storage AE when receiving response status codes.

**Table 4.10
STORAGE COMMITMENT N-ACTION RESPONSE STATUS HANDLING BEHAVIOR**

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The system waits for the N-Event-Report.

Table 4.11 summarizes the behavior of Storage AE during communication failure.

4.2.1.3.2 Activity – Query and Request Retrieval of Studies

4.2.1.3.2.1 Description and Sequencing of Activities

The user may set a filter in Review to specify the criteria used in querying the Query/Retrieve SCP. When the user initiates the query, the system sends a number of Study Root C-FIND requests, using the filter parameters set by the

user. The user may then select from the query results one or more of the studies to initiate a Study Root C-MOVE request for the selected exam(s).

The system actually performs a number of C-FIND requests at multiple levels in the DICOM object hierarchy to get the data it requires to display a study. The “message” displayed above is the effective combination of the C-FIND requests that are made to get the data in the next table (below).

4.2.1.3.2.3.2 Study Root Query Retrieve – MOVE SOP Class

After examining the results of the user-initiated Query, the user may select one or more Studies from the query results list and request that the contents of the selected Studies be retrieved. A C-MOVE message is sent to the Query/Retrieve SCP requesting that the selected items be stored back to this system.

4.2.1.4.1 Activity – Receive Storage Commitment Response

4.2.1.4.1.1 Description and Sequencing of Activities

The Storage AE accepts associations for pending responses to a Storage Commitment Request only using SCP/SCU Role Negotiation; explicitly stating that the association is initiated by the SCP to the SCU.

4.2.1.4.2 Activity – Storage from a Remote Storage SCU

4.2.1.4.2.1 Description and Sequencing of Activities

The Storage AE accepts associations for storage from remote Storage SCUs. There are two distinct scenarios in which images are transferred from a remote Storage SCU to EPIQ:

- Fullment of a Query/Retrieve C-MOVE request by the Query/Retrieve SCP
- Unsolicited push of images from a remote Storage SCU

In order for EPIQ to accept associations from a remote Storage SCU, the AE Title of the remote Storage SCU must be configured as a Storage device in EPIQ. Studies of images that are received through this mechanism will appear in the Patient Directory.

4.2.2.3 Association Initiation Policy

4.2.2.3.1 Activity – Worklist Update

4.2.2.3.1.1 Description and Sequencing of Activities

The Worklist Update activity is capable of updating the modality worklist using either a Broad Query or a Patient Query, as described later in this section. A possible sequence of interactions between the Workflow AE and a Departmental Scheduler (e.g. a device such as a RIS or HIS which supports the MWL SOP Class as an SCP) is illustrated in Figure 5:

**Figure 5
SEQUENCING OF ACTIVITY – WORKLIST UPDATE**

4.2.2.3.1.1.1 Worklist Update using Broad Query

In Broad Query, the Modality Worklist SCP is queried based on a set of pre-defined query attributes (see Table 4.30 Column “BQ” for DICOM Attributes corresponding to each parameter):

- Scheduled Date = today’s date
- Station Name = this system’s name or a user-specified value
- Station Location = this system’s location or a user-specified value
- AE Title = this system’s AE Title or a user-specified value

- Modality = "US" or a user- specified value

The user may configure one of the following schemes for updating the worklist using Broad Query:

- The worklist may be updated when the user presses "Update Worklist" on the patient data entry screen
- The worklist may be updated automatically each time an exam is ended
- The worklist may be updated periodically at a configurable time interval between 15 and 120 minutes in 15 minute increments

The user at may cancel a worklist update anytime between sending the update request and receiving the final response.

4.2.2.3.1.1.2 Worklist Update using Patient Query

In Patient Query, the Modality Worklist SCP is queried based on a set of query attributes provided by the user at the time of the query (see Table 4.30 Column "PQ" for DICOM Attributes corresponding to each parameter):

- Modality = "US" or the custom value defined for Broad Query
- Any combination of
 - Patient Last Name = wildcard or matching leading letters
 - Patient ID = exact match
 - Accession Number = exact match
 - Requested Procedure ID = exact match
 - Scheduled Date = exact match or matching a date range around today

Patient Query is performed manually when specifically requested by the user. The user at may cancel a worklist update anytime between sending the update request and receiving the final response.

4.2.2.3.1.2 Proposed Presentation Contexts

EPIQ will propose Presentation Contexts as shown in the following table:

VR:	DICOM VR for this attribute.
BQ:	Matching keys for Broad Query Worklist Update. An "S" indicates that EPIQ supplies an attribute value for Single Value Matching or additional specific attributes indicated by "(S)". Criteria are specified in PSC Network/DICOM DICOM Settings, Worklist device, Advanced Settings dialog.
PQ:	Interactive Query Key for Patient Query Worklist Update. An "x" indicates that EPIQ supplies this attribute as matching key. Criteria are specified in the Search dialog accessed from Patient Data Entry screen Worklist tab.
R:	Return keys. An "x" indicates that EPIQ supplies this attribute as a Return Key with zero length for Universal Matching.
D:	Displayed keys. An "x" indicates that this worklist attribute is displayed to the user in the Patient Data Entry screen or Worklist Directory.
IOD:	An "x" indicates that this Worklist attribute is included into all Object Instances created during performance of the related Procedure Step.

4.2.2.3.2 Activity –Acquire Images

4.2.2.3.2.1 Description and Sequencing of Activities

An Association to the configured MPPS SCP system is established immediately after the first image is acquired to send the MPPS N-CREATE message with status of "IN PROGRESS".

The "End Exam" button causes a "COMPLETED" status in the N-SET message. An exam for which an MPPS Instance is sent with a status of "COMPLETED" can no longer be updated.

The "Cancel Exam" button causes a "DISCONTINUED" message. An exam for which an MPPS Instance is sent with a state of "DISCONTINUED" can also no longer be updated.

The system supports creation of "unscheduled cases" by allowing MPPS Instances to be communicated for locally registered Patients.

The system performs a single Performed Procedure Step at a time per Scheduled Procedure Step.

EPIQ will initiate an Association to issue an:

- N-CREATE request according to the Create Modality Performed Procedure Step SOP Instance operation or a
- N-SET request to finalize the contents and state of the MPPS according to the Set Modality Performed Procedure Step Information operation.

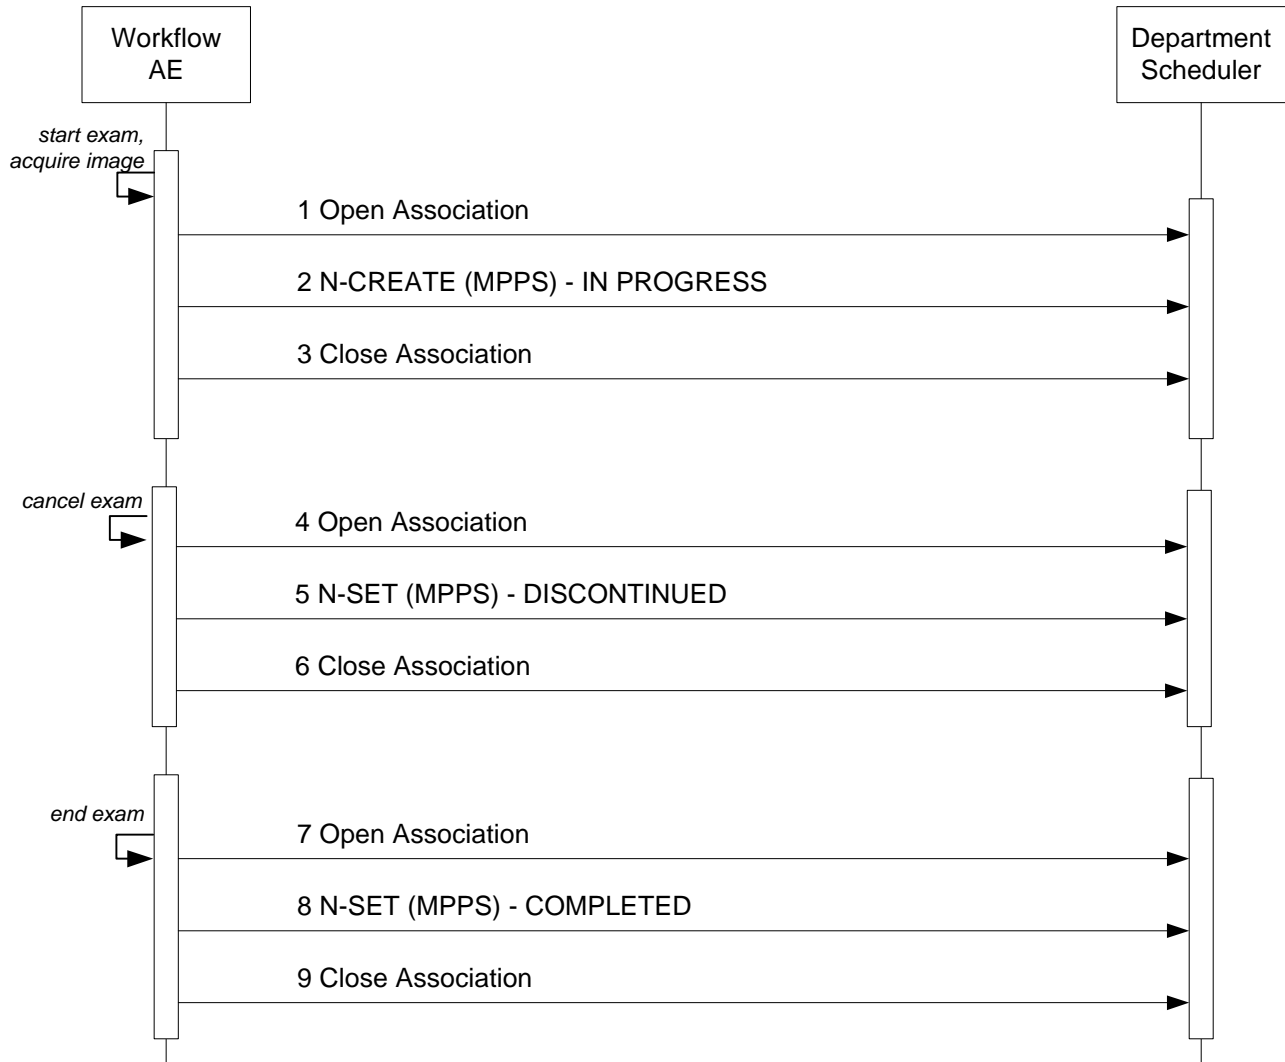

Figure 6
SEQUENCING OF ACTIVITY – ACQUIRE IMAGES

A possible sequence of interactions between the Workflow AE and a Departmental Scheduler (e.g. a device such as a RIS or HIS which supports the MPPS SOP Class as an SCP) is illustrated in Figure 6.

Note: The Cancel and End Exam commands are mutually exclusive. They are both represented here for illustration purposes only. Actual workflow uses one or the other for a given exam.

4.2.2.3.2.2 Proposed Presentation Contexts

EPIQ will propose Presentation Contexts as shown in the following table:

**Table 4.31

4.2.2.4 Association Acceptance Policy

The Workflow Application Entity does not accept Associations.

4.2.3 Hardcopy Application Entity Specification

4.2.3.1 SOP Classes

EPIQ provides Standard Conformance to the following SOP Classes:

**Table 4.35
SOP CLASSES FOR AE HARDCOPY**

SOP Class Name	SOP Class UID	SCU	SCP
Basic Grayscale Print Management Meta	1.2.840.10008.5.1.1.9	Yes	No
Basic Color Print Management Meta	1.2.840.10008.5.1.1.18	Yes	No

4.2.3.2 Association Establishment Policy

4.2.3.2.1 General

The DICOM standard application context name for DICOM 3.0 is always proposed:

**Table 4.36
DICOM APPLICATION CONTEXT FOR AE HARDCOPY**

Application Context Name	1.2.840.10008.3.1.1.1
--------------------------	-----------------------

4.2.3.2.2 Number of Associations

EPIQ initiates one Association at a time for each configured hardcopy device. Multiple hardcopy devices can be configured.

**Table 4.37
NUMBER OF ASSOCIATIONS INITIATED FOR AE HARDCOPY**

Maximum number of simultaneous Associations	2 (number of configured hardcopy devices)

Implementation Version Name	MIP10.1RC2

4.2.3.3 Association Initiation Policy

4.2.3.3.1 Activity – Film Images

4.2.3.3.1.1 Description and Sequencing of Activities

The system composes images onto film sheets and sends print requests to job queue.

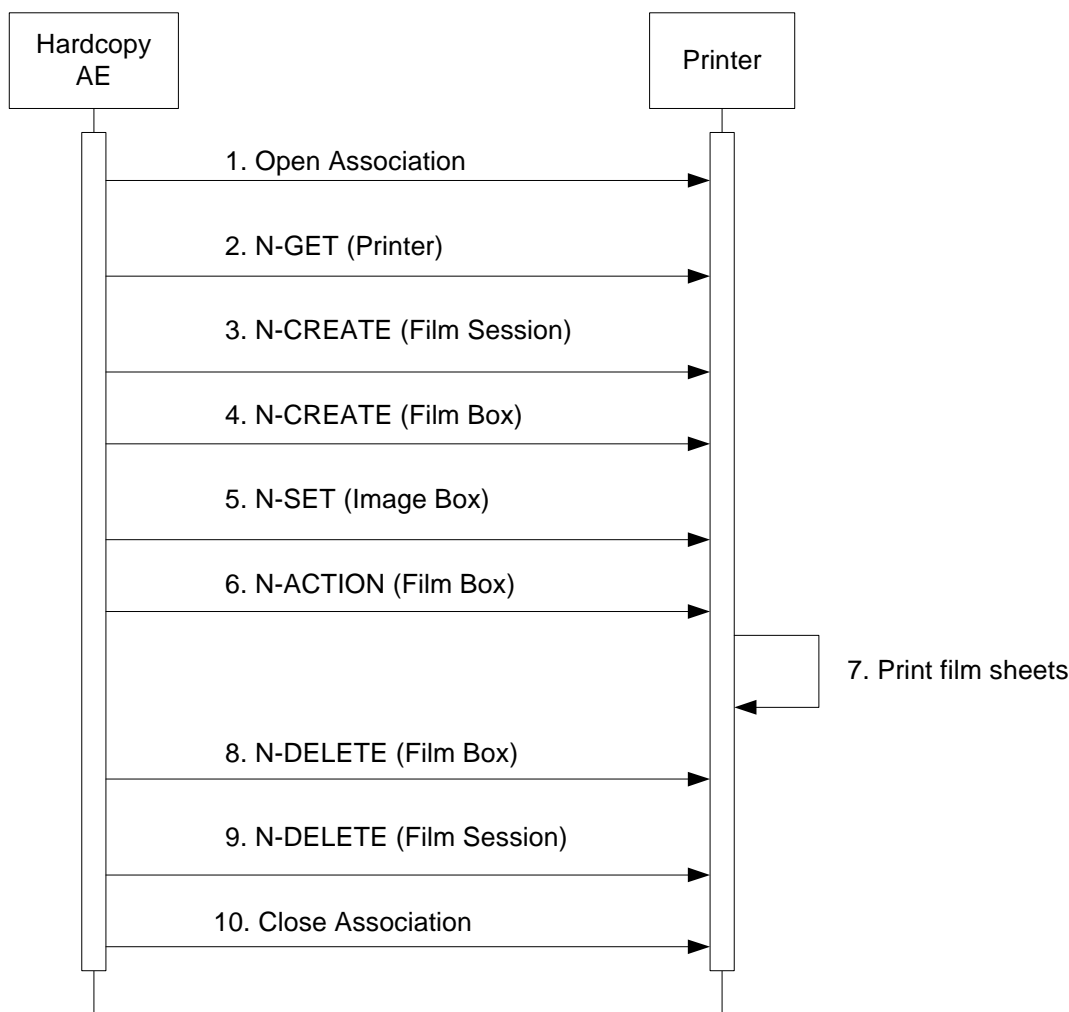

Figure 7
SEQUENCING OF ACTIVITY – PRINT IMAGES

Figure 7 illustrates a typical sequence of DIMSE messages sent over an association between Hardcopy AE and a Printer. Two DICOM Printers may be simultaneously configured, one for BW and one for Color prints.

If both BW and Color printers are configured and selected, the user may choose to automatically send BW prints only to the BW printer and color prints only to the color printer. This feature may only be used while configured for “After Each Image”, and during the exam

When using the “Send on Demand” feature with print, page(s) that have not been exported will be sent, according to the formatting configuration. If less than a full page is sent, then the remaining space on the page will be left blank.

Status of the print-job is reported through the Printer Queue Manager icon. Only one job will be active at a time for each separate hardcopy device. If any Response from the remote Application contains a status other than Success, the Association is aborted and the related Job is switched to a failed state. It can be restarted any time by user interaction.

4.2.3.3.1.2 Proposed Presentation Contexts

Table 4.40 shows the Presentation Contexts EPIQ is capable of proposing.

**Table 4.40

4.2.3.3.1.3 SOP Specific Conformance for all Print SOP Classes

Table 4.41 summarizes the general behavior of all Hardcopy AE during communication failure. This behavior is common for all SOP Classes supported by Hardcopy AE.

**Table 4.41
COMMUNICATION FAILURE BEHAVIOR**

Exception	Behavior
Timeout	The Association is aborted and reported as "Failed."
Association aborted by the SCP or network layers	"Network Communication Failure" is reported.

Details of the supported attributes and status handling behavior are described in the following subsections.

4.2.3.3.1.3.1 Printer SOP Class Operations (N-GET)

Hardcopy AE uses the Printer SOP Class N-GET operation to obtain information about the current printer status. Table 4.42 lists the attributes obtained via N-GET.

**Table 4.42
PRINTER SOP CLASS N-GET RESPONSE ATTRIBUTES**

Attribute Name	Tag	VR	Value	Presence of Value	Source
Printer Status	(2110,0010)	CS	Provided by Printer	ALWAYS	Printer
Printer Status Info	(2110,0020)	CS	Provided by Printer	ALWAYS	Printer

The Printer Status information is evaluated as follows:

1. If Printer status (2110,0010) is NORMAL, the print-job continues to be printed.
2. If Printer status (2110,0010) is FAILURE, the print-job is marked as failed.
3. If Printer status (2110,0010) is WARNING, the print-job continues to be printed.

4.2.3.3.1.3.2 Printer SOP Class Notifications (N-EVENT-REPORT)

Hardcopy AE is capable of receiving an N-EVENT-REPORT request at any time during an association.

Table 4.44 summarizes the behavior of Hardcopy AE when receiving Event Types within the N-EVENT-REPORT.

**Table 4.44
PRINTER SOP CLASS N-EVENT-REPORT BEHAVIOUR**

Event Type Name	Event Type ID	Behavior
Normal	1	The print-job continues to be printed.
Warning	2	The print-job. For user-recoverable warnings, the job fails and a 1-hour retry period starts, retrying every 20 seconds.
Failure	3	The print-job is marked as failed.
*	*	Status code of 0113H

Table 4.45 summarizes the reasons for returning specific status codes in a N-EVENT-REPORT response.

Failure	Processing Failure	0110H	An internal error occurred during processing of the N-EVENT-REPORT. A short description of the error will be returned in Error Comment (0000,0902).

4.2.3.3.1.3.3 SOP Specific Conformance for the Film Session SOP Class

Hardcopy AE supports the following DIMSE operations for the Film Session SOP Class:

— N-CREATE

Details of the supported attributes and status handling behavior are described in the following subsections.

4.2.3.3.1.3.4 Film Session SOP Class Operations (N-CREATE)

4.2.3.3.1.4 SOP Specific Conformance for the Film Box SOP Class

Hardcopy AE supports the following DIMSE operations for the Film Box SOP Class:

— N-CREATE

— N-ACTION

Details of the supported attributes and status handling behavior are described in the following subsections.

4.2.3.3.1.4.1 Film Box SOP Class Operations (N-CREATE)

4.2.3.3.1.5 SOP Specific Conformance for the Image Box SOP Class

Hardcopy AE supports the following DIMSE operations for the Image Box SOP Class:

— N-SET

Details of the supported attributes and status handling behavior are described in the following subsections.

4.2.3.3.1.5.1 Image Box SOP Class Operations (N-SET)

4.2.3.4 Association Acceptance Policy

The Hardcopy Application Entity does not accept Associations.

4.2.4 Verification Application Entity specification

4.2.4.1 SOP Class

EPIQ provides Standard Conformance to the following SOP Class:

**Table 4.53
SOP CLASSES FOR AE VERIFICATION**

SOP Class Name	SOP Class UID	SCU	SCP
Verification	1.2.840.10008.1.1	Yes	Yes

4.2.4.2 Association Establishment Policy

4.2.4.2.1 General

The DICOM standard application context name for DICOM 3.0 is always proposed:

**Table 4.54
DICOM APPLICATION CONTEXT FOR AE VERIFICATION**

Application Context Name	1.2.840.10008.3.1.1.1

Implementation Version Name	MIP10.1RC2

4.2.4.3 Association Initiation Policy

4.2.4.3.1 Activity – Verify Remote SCP

4.2.4.3.1.1 Description and Sequencing of Activities

The user selecting the “Verify” button on the Device configuration page initiates the verification request to the device whose data has just been configured. This tool allows the user to ensure all data (AE Title, Port and IP Address) was correctly entered and the remote device may be contacted. It uses C-Echo and verifies the remote device supports all configured SOP Classes. Any SOP Classes requested that are not supported will report, “failed”. Operations may continue, but objects of the type that are not supported will not be exported.

EPIQ initiates an Association in order to issue:

- C-ECHO request according to the Verification SOP Class.

**Figure 8a
SEQUENCING OF ACTIVITY – ISSUE VERIFY**

4.2.4.3.1.2 Proposed Presentation Contexts

EPIQ will propose Presentation Contexts as shown in the following table:

**Table 4.59

4.2.4.3.1.3 SOP Specific Conformance for Verification

When Verification of a remote AE is requested in PSC – Network/DICOM – DICOM Settings, the Association Negotiation Request message contents for each DICOM device will include Presentation Contexts for the following SOP Classes:

**Table 4.60

If SR export to a Storage Server is not desired, deselect Export SR after verification without verifying again. Storage Commitment requires configuration of both a Storage server and a Storage Commitment server, and association of the Storage server to the Storage Commitment server in the PSC – Network/DICOM – DICOM Selection page.
DICOM Commit Server	Storage Commitment Push Model Verification	Storage Commitment requires configuration of both a Storage server and a Storage Commitment server, and association of the Storage server to the Storage Commitment server in the PSC – Network/DICOM – DICOM Selection page.
DICOM PPS Server	Modality Performed Procedure Step Verification	To activate this server, it must be selected in the PSC – Network/DICOM – DICOM Selection page.
DICOM Worklist Server	Modality Worklist Verification	To activate this server, it must be selected in the PSC – Network/DICOM – DICOM Selection page.

DICOM Structured Report Server	Comprehensive Structured Report Storage Verification	Configuration of this device is only required if SRs are to be exported to a Storage SCP. To activate this server, it must be selected in the PSC – Network/DICOM – DICOM Selection page.
DICOM BW Printer	Basic Grayscale META Print Verification	All bw printers configure this entry. If the printer supports both BW and Color, then this must be configured to allow BW on that printer.
DICOM Color Printer	Basic Color META Print Verification	May be the same printer if color is also supported.

Success		0000	Device Status is set to: Verified
Refused	Out of Resources	A700	Device Status is set to: Not Verified
Failed	Unable to Process	C000 – CFFF	Same as “Refused” above.
*	*	Any other status code.	Same as “Refused” above.

Results of a user-initiated Verify are reported as one of three outcomes:

- Successfully Verified – All SOP Classes proposed by EPIQ were accepted AND
- Verify Failed – Server could not be reached OR remote AE is not running OR no SOP Classes proposed by EPIQ were accepted OR C-ECHO did not return “Success”
- Partially Verified – Verification SOP Class and at least one other proposed SOP Class were accepted AND C-ECHO returned “Success” AND at least one proposed SOP Class was not accepted

Any Presentation Contexts that were not accepted are no longer initiated by EPIQ, even if the network or server problem that caused the failure is fixed until a subsequent Verify is initiated from PSC – Network/DICOM – DICOM Settings for that device and returns a successful verification for the service.

For example, if Ultrasound Image SOP Class verifies successfully but Ultrasound Multi-frame Image and Comprehensive Structured Report SOP Classes do not verify successfully from PSC – Network/DICOM – DICOM Settings, then transfers of Ultrasound will be initiated by EPIQ but transfers of Ultrasound Multi-frame Images and Structured Reports will not be initiated by EPIQ.

4.2.4.4 Association Acceptance Policy

4.2.4.4.1 Activity – Verification By Remote AE

4.2.4.4.1.1 Description and Sequencing of Activities

The system listens on the port configured on the Global System Configuration screen for Verification requests initiated by other remote devices. The calling device AE must already be configured as a remote device in EPIQ or the association is rejected.

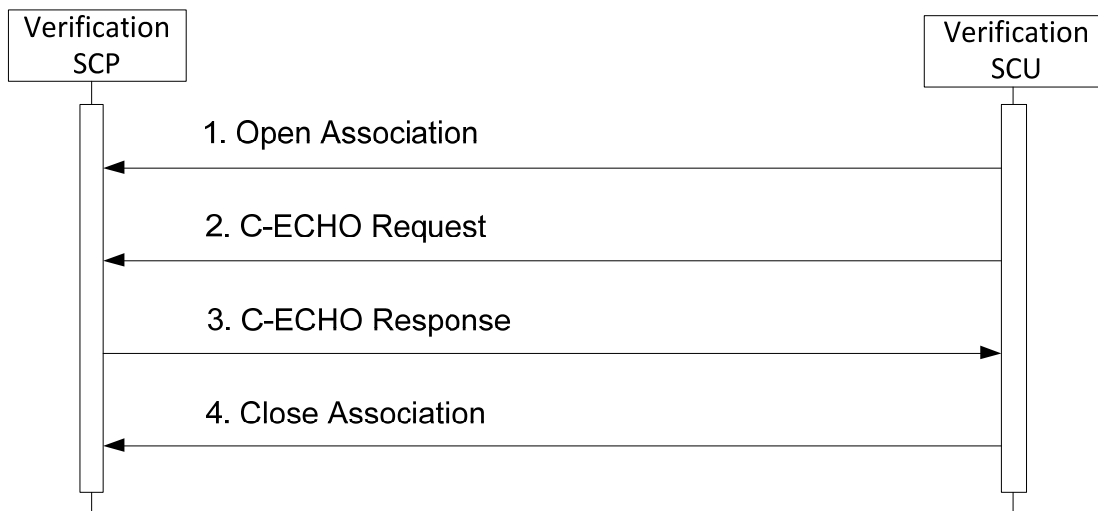

Figure 8b
SEQUENCING OF ACTIVITY – VERIFICATION BY REMOTE AE

4.2.4.4.1.2 Accepted Presentation Contexts

EPIQ will accept Presentation Contexts as shown in the following table:

Table 4.62
ACCEPTABLE PRESENTATION CONTEXTS FOR
ACTIVITY VERIFICATION BY REMOTE AE

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Ext. Neg.
Name	UID	Name List	UID List

4.2.4.4.1.3 SOP Specific Conformance for Verification

The association request will be rejected if the remote AE is not configured on EPIQ.

4.3 NETWORK INTERFACES

4.3.1 Physical Network Interface

EPIQ supports both wired and wireless network interface as follows:

Table 4.63
SUPPORTED PHYSICAL NETWORK INTERFACE

Ethernet 10/100/1000 BaseT, RJ-45, UTP, STP; AutoDetect Speed, Full or Half Duplex
Wireless 802.11 B/G/N using optionally provided wireless adapter only

If both wired and wireless networks are configured, EPIQ will select the best available network automatically as followed:

- The Wired network has priority and it will be used if available
- The Wireless network will be automatically used if the wired network is not available.

4.3.2 Additional Protocols

EPIQ supports the following additional protocols:

- Dynamic Host Configuration Protocol (DHCP): If enabled by the user, DHCP is used to acquire network configuration parameters, such as IP address, subnet mask, gateway address, and DNS server addresses from the DHCP server.
- Domain Name System (DNS): If configured, DNS is used to lookup server network addresses specified by hostname
- Wi-Fi Protected Access (WPA) and Wi-Fi Protected Access II (WPA2) and WPA2 Personal (PSK): Wireless encryption method with shared-key authentication. Provides reasonable wireless security in small to medium wireless network environments.
- Wi-Fi Protected Access (WPA) and Wi-Fi Protected Access II (WPA2) and WPA2 Enterprise: Wireless encryption method with centralized authentication. Provides very good wireless security in medium to large wireless network environments with centralized authentication server support.

4.3.3 IPv4 and IPv6 Support

EPIQ supports either IPv4 and IPv6 internet protocol.

When IPv4 is used

- EPIQ's network address may be specified as either static IP addresses or DHCP
- Remote servers' network addresses may be specified as either IP address or DNS hostname

When IPv6 is used

- EPIQ's network address must be generated automatically as link local address, router discovery address, or assigned by DHCP. Static IPv6 address entry is not supported.
- Remote server' network addresses must be specified by DNS hostname; fixed IPv6 address entry is not supported.
- IPv6 versions of DHCP client, DNS client, ICMP, etc. are supported while IPv6 is being used.

4.4 CONFIGURATION

4.4.1 AE Title/Presentation Address Mapping

Philips Support Connect, or PSC, is the primary interface on EPIQ for configuring DICOM services. It is reached by pressing the “Support” key on the EPIQ control panel.

Additional acquisition and export settings are configured in the Setups interface. This interface is reached by selecting Utilities – Setups – Acquisition/Capture.

4.4.1.1 Local AE Title

All local AEs use the same AE Title and TCP/IP Port configured via the PSC – Network/DICOM – DICOM Settings screen. The system listens on the configured Port for Verification requests from remote AE’s, Storage Commitment N-Event reports, and images received from remote Storage SCP’s.

4.4.1.2 Remote AE Title/Presentation Address Mapping

Remote AE’s may be configured on the PSC – Network/DICOM – DICOM Settings screen. The screen is organized into DICOM Devices, each specified by

- The Device Type which indicates the services for which the device is to be used
- A Device Name given by the user in order to reference the device elsewhere in the EPIQ user interface
- AE Title for the remote AE
- Port for the remote AE
- Network address, specified either by IPv4 IP address or a Hostname that is resolved by DNS
- Additional settings specific to each device type

The following Device Types may be configured:

Table 4.64
CONFIGURABLE DICOM DEVICES

Device Type	Supported SOPs
DICOM Storage Server	Storage SOP Classes defined in Section 4.1.2.1 Study Root Query Retrieve-FIND Study Root Query Retrieve-MOVE
DICOM Commit Server	Storage Commitment Push Model
DICOM MPPS Server	Modality Performed Procedure Step
DICOM Worklist Server	Modality Worklist FIND
DICOM Structured Report Server	Comprehensive Structured Report Storage
DICOM BW Printer	Basic Grayscale Print Meta
DICOM Color Printer	Basic Color Print Meta

To configure a single server that supports multiple services, such as image store, storage commitment, and MPPS, a separate “Device” entry must be configured for each service using the correct device type, an appropriate AE Title, Port, and network address.

To configure Storage Commitment, define a Storage Server to which objects to be committed will be stored and a Storage Commitment server (which may or may not be the same physical computer). Then, on the DICOM Selection screen, associate this Storage Server with the associated Storage Commitment server.

Configuration specific to particular Device Types is described below.

4.4.1.2.1 Image Storage Configuration

Multiple remote Storage SCPs can be defined and up to five may be selected simultaneously for export. For automatic export of acquired images during an exam if set to “Send After Each Print/Acquire” or at the end of an exam is set to “Send At End of Exam”, a destination device must be enabled in Setups – Acquisition/Capture – Archive/Print screen. This screen allows each capture control to be separately configured for export destination. *If a destination device is not enabled for a capture control, any images acquired through that capture control will not be automatically sent to that destination device.*

Each Storage Server includes a set of Advanced Settings allowing for device-specific control of the data to be stored to that device. These settings include:

- Compression to be used for single-frame images
- Compression to be used for multi-frame images
- Whether to send images in Monochrome or Color photometric interpretations
- Whether to limit export to Implicit VR Little Endian transfer syntax. Generally used only for the few devices that don't understand any other transfer syntax.
- Whether to send Structured Reports to this destination (see also 4.4.1.2.2)
- Whether to send Native Data of various imaging modes to this device. Native Data should not be selected unless the data will be displayed by a workstation using Philips' QLAB™ analysis software which is able to understand this data, as the datasets are large and could possibly affecting data transfer performance.
- Whether to send Volume data and Philips Proprietary 3D Presentation State to this device. If not enabled, the device would still receive 2D representations of acquired volumes.
- Association Timeout settings (see 4.4.1.2.3)
- Whether to send Pixel Spacing (0028,0030) with single-mode images to this device. This is in addition to any Region Calibration that may otherwise be sent to this device. Use for allowing measurements to be made on DICOM viewers that don't understand Ultrasound Region Calibration.

4.4.1.2.2 Structured Report Storage Configuration

Structured Reports may only be sent to one Storage SCP at a time. This could either be:

- a Storage server that also accepts Structured Reports. To enable this method, enable Structured Report export in Storage Server Advanced Settings. Further, the device must accept the Comprehensive Structured Report Storage SOP Class during the Verify of this device.
- a Structured Report server that only supports and receives reports. To enable this method, create a Structured Report server in PSC – Network/DICOM – DICOM Settings and then select it as the active Structured Report server in PSC – Network/DICOM – DICOM Selection.

For Structured Reports to be sent automatically at end exam, the storage destination must be selected for either the Acquire 1 or Acquire 2 keys in Setups – Acquisition/Capture – Archive/Print.

If SR support is confirmed using verify and measurements are made during the exam, one or more Structured Reports will be sent to the device. OB-GYN study types generate OB-GYN Ultrasound Procedure Reports, Vascular or Abdominal study measurements generate a VascularUltrasound Report, and the Adult Echo Study generates an Echocardiography Procedure Report. Two types of Pediatric Echo Reports are available depending on configuration: DICOM-standard Pediatric, Fetal, and Congenital Cardiac Ultrasound Report or Philips proprietary Pediatric Echo Report. Note that there may be more than one report instance per exam, so long as they are from different study types. If no separate Structured Report server is configured and the SOP Class fails negotiation on the configured Storage server, then no SR objects will be created, however, a failed job will remain in the queue. This will need to be manually removed.

User Defined measurements will now be sent in a Structured report. No Structured Report is sent for General, Small Parts, or Breast measurements.

4.4.1.2.3 Advanced Storage Device Association Timeout Configuration

Three timeout settings may now be easily configured for each “Storage” device via its “Advanced Settings” properties page.

ARTIM (Association Request/Reject/Release) Timeout

- The Timeout between establishment of a TCP/IP connection and the actual Association Request message. Also specified the maximum timeout between association reject or release and the actual TCP/IP disconnect.

Network Reply Timeout

- If there is no response from the SCP within this time period, the Network/Reply timer expires. The system will send a DICOM A-Associate-Release Rq.

Association Timeout SCU/SCP

- Association inactivity timeout. In most cases where the system is configured to Send After Each Image, this timeout needs to exceed the maximum idle time expected during normal use.

4.4.1.2.4 Serial Structured Report Storage Configuration

Serial Report data is a non-DICOM representation of Structured Reports which may additionally be exported via a USB – RS-232 adapter cable to a null-modem RS-232 cable to a serial port configured for 115200 baud, 8 bits, No Parity, 1 Stop Bit and Xon-Xoff Flow Control. Output will be an XML representation of the DICOM Structured Report object.

4.4.1.2.5 Workflow Configuration

Multiple Worklist servers may be defined, but only a single Worklist server can be selected at a time on the PSC – Network/DICOM – DICOM Selection page. See 4.2.2.3.1 for the specification of query criteria for worklist queries.

Multiple MPPS servers may be defined, but only a single MPPS server can be selected at a time on the PSC – Network/DICOM – DICOM Selection page. No other configuration is required for MPPS servers.

4.4.1.2.6 Hardcopy

Multiple remote Print SCPs can be defined, but no more than one Grayscale and one Color Print SCP may be selected at a time.

Automatic sending of color images to the color printer and BW images to the BW printer is selectable in the Printer/Network > Print/Capture page’s “Send Images/Clips” section.

5 MEDIA STORAGE

5.1 IMPLEMENTATION MODEL

5.1.1 Application Data Flow

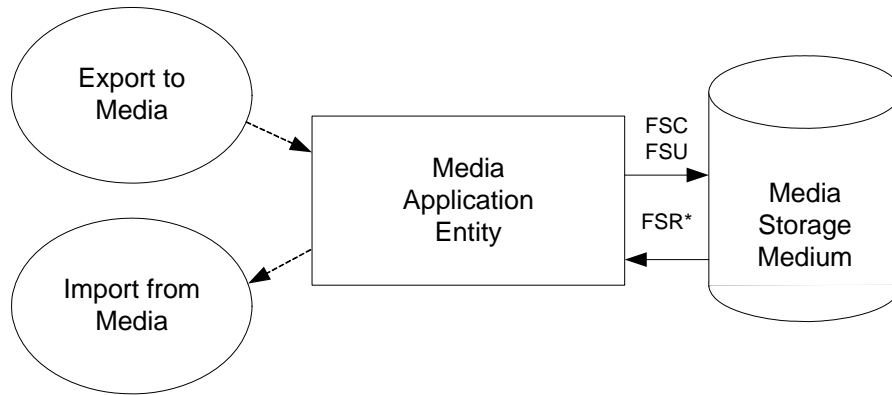

Figure 9
APPLICATION DATA FLOW DIAGRAM FOR MEDIA STORAGE

The Media Application Entity exports Images, 3D Presentation States and structured Reports to a disk Storage medium. It is associated with the local real-world activity “Export to Media”. “Export to Media” is performed upon user request for selected studies, performed procedures, or instances (images, 3D Volumes, 3D Presentation States, and Structured Reports).

Throughout this section, the term “Media” refers to any of the media listed below which is in use.

EPIQ will support the use of most writable media including CD-R, CD-RW, DVD-R, DVD+R, DVD-RW, DVD+RW and removable USB Storage Device. DICOM structure will be the same regardless of media used.

Note that although –R or +R media may be erased multiple times using “erase”, the space may not be recovered. If a –R or +R media is “Erased”, the previously written data is no longer available, and only the remaining unwritten space on the media is available for use. This restriction does not apply to + / - RW media. Erasing + / - RW media allows the entire disk’s space to be used.

If a –R or +R is erased, it is not usable again for DICOM exports due to reliability concerns associated with DVD media. Only DVD+RW/-RW can be erased and used again for DICOM export.

5.1.2 Functional Definition of AEs

5.1.2.1 Functional Definition of Media Application Entity

Using “Export to... Media” will pass the currently selected studies, exams, or individually selected images to the Media Application Entity. The SOP Instances associated with the selection will be collected into one or more export jobs. The contents of each export job will be written to the installed media. If the capacity of a disk is exceeded, the user is provided a dialog, stating capacity exceeded and to insert another disk.

5.1.3 Sequencing of Real-World Activities

At least one image must exist and be selected before the Media Application Entity can be invoked. The operator can insert new media at any time. If no writable media is available, the Media queue management Icon will be Yellow.

5.1.4 File Meta Information Options

The implementation information written to the File Meta Header in each file is:

Table 5.1

Implementation Class UID	1.3.46.670589.5.2.10
Implementation Version Name	MIP10.1RC2

5.2 AE SPECIFICATIONS

5.2.1 Media Application Entity Specification

The Media Application Entity provides standard conformance to the DICOM Interchange Option of the Media Storage Service Class. The Application Profiles and roles are listed in DICOM PS 3.10 and PS 3.11.

Table 5.2
MEDIA APPLICATION PROFILES, ACTIVITIES, AND ROLES

Application Profiles Supported	Real World Activity	Roles	SC Option
STD-US-SC-SF&MF-CDR	Export to....Media	FSC	Interchange
STD-US-SC-SF&MF-DVD STD-GEN-USB-JPEG		FSC, FSU	
STD-US-SC-SF&MF-CDR STD-US-SC-SF&MF-DVD STD-GEN-USB-JPEG	Send to Hard Disk (import)	FSR	

5.2.1.1 File Meta Information for the Application Entity

The File-Set ID (0004,1130) included in the File Meta Header of the DICOMDIR is the same as the volume label of the media.

5.2.1.2 Real-World Activities

5.2.1.2.1 Activity – Export to Media

The Media Application Entity acts as an FSC using the interchange option when requested to export SOP Instances from the local database to media.

The contents of the export job will be written together with a corresponding DICOMDIR to media. The user can cancel an export job in the job queue. Writing in multi-session format to CDs and DVDs is not supported; any CD or DVD with DICOM data on it will be viewed as read-only and additional information will not be written to the media. USB media can be written many times.

5.2.1.2.2 Activity – Import from Media

The Media Application Entity acts as an FSR using the interchange option when requested to import SOP Instances from media to the local database.

The Patient Directory user interface displays the contents of removable media. Exams selected by the user are transferred from the media to the system for review. Objects transferred to the system retain their original SOP

Instance UIDs. Patient Directory must be set to display the contents of the Hard Disk before the imported exam information may be displayed.

Note: Structured Reports may not be read back into EPIQ.

5.2.1.2.3 Activity – Update to Media

The Media Application Entity acts as an FSU using the interchange option when requested to export SOP Instances from the local database to media upon which DICOM data already resides.

The system user selects exams from the system’s directory for transfer to media that already contains data. The DICOMDIR is updated allowing access to original and new data.

DVD +RW media may be erased at any time, removing all previously recorded data.

5.2.1.2.3.1 Media Storage Application Profiles

See Table 5.2 for supported Application Profiles.

5.2.1.2.3.2 Options

The Media Application Entity supports the SOP Classes and Transfer Syntaxes listed in Table 5.3..

6 SUPPORT OF CHARACTER SETS

All EPIQ DICOM applications support the

ISO_IR 100 (ISO 8859-1:1987 Latin Alphabet No. 1 supplementary set)

7 SECURITY

DICOM security is not implemented on EPIQ at this time.

EPIQ incorporates an internal firewall that only accepts incoming traffic on the designated listening port, as configured in PSC – Network/DICOM – DICOM Settings. The port is only opened if one or more servers are defined.

8 ANNEXES

8.1 IOD CONTENTS

8.1.1 Created SOP Instances

Table 8.1 specifies the attributes of an Ultrasound Image transmitted by the EPIQ storage application.

Table 8.2 specifies the attributes of a Comprehensive Structured Reports transmitted by the EPIQ storage application. Please note that there are differences between which Structured Report Templates are used in each product.

The following tables use a number of abbreviations. The abbreviations used in the “Presence of ...” column are:

VNAP	Value Not Always Present
ANAP	Attribute Not Always Present
ALWAYS	Always Present
ALWAYSUA	Always Present, unless anonymized
EMPTY	Attribute is sent without a value

The abbreviations used in the “Source” column:

MWL	the attribute value source Modality Worklist
USER	the attribute value source is from User input
AUTO	the attribute value is generated automatically
MPPS	the attribute value is the same as the Modality Performed Procedure Step service
CONFIG	the attribute value source is a configurable parameter

8.1.2 Usage of Attributes from Received IOD’s

The attributes of images imported to EPIQ are stored with level 2 conformance, are used in the display of these images, and are exported if the imported images are exported from EPIQ.

The usage of attributes received via Modality Worklist C-FIND is described in Section 4.2.2.3.1.3.

8.1.3 Attribute Mapping

Table 8.28 summarizes the relationships between attributes received via MWL, stored in acquired images and communicated via MPPS. The format and conventions used in Table 8.28 are the same as the corresponding table in IHE Technical Framework, Rev. 11.0 07-24-2012, vol. II: Transactions.

8.1.4 Coerced/Modified Fields

The MWL AE will truncate attribute values received in the response to a MWL Query if the value length is longer than the maximum length permitted by the attribute's VR.

8.1.5 Attribute Anonymization

The EPIQ supports basic anonymization in that a set of identifying DICOM attributes that are stored to media will be either removed or replaced with non-identifying data, according to the HIPAA guidelines for anonymization.

The option to deidentify is available at the time of export for the manual send to media workflows.

Table 8.29 contains a list of attributes containing patient identification and how EPIQ processing the attribute value when DICOM deidentification is selected on export. This table is derived from DICOM 2007 PS3.15 Annex E, Table E.1-1. Note most attributes are labeled 'Keep' because they are not classified as identifying by the United States Health Insurance Portability and Accountability Act of 1996 (HIPAA) Safe-Harbor Deidentification Guidelines.

- We will replace the Patient Name with an unidentifiable string composed of a prefix 'Deld-' and followed by a unique numeric sequence,
- We will replace the Patient ID with a new generated unique ID.
- All noted Instance UIDs are modified because the Voyager generated instance UID's are generated at the time of the start of the procedure and suffixed with a date/time string noting the current date and time. Because all manner of dates are considered identifying, the date and time portion of these strings is replaced with a new date and time at the time of export. In this way we can be sure that they can not be linked back to the original date and time of the study. Referenced SOP instance UID links are maintained.
- The Study ID and Performed Procedure Step ID on Voyager include date strings, and thus must be removed.

8.2 DATA DICTIONARY OF PRIVATE ATTRIBUTES

Philips private attributes in groups 0x2001 and 0x200D may be included in objects created by EPIQ.

8.3 CODED TERMINOLOGY AND TEMPLATES

The Workflow AE is capable of supporting arbitrary coding schemes for Procedure and Protocol Codes. The contents of Requested Procedure Code Sequence (0032,1064) and Scheduled Protocol Code Sequence (0040,0008) supplied in Worklist Items will be mapped to Image IOD and MPPS attributes as described in Table 8.28.

Structured Reporting uses codes supplied by DCMR (DICOM Code Mapping Resource, PS 3-16), LOINC, SRT and 99PMSBLUS (Philips Private Codes for Ultrasound).

8.4 GRAYSCALE IMAGE CONSISTENCY

The high-resolution display monitor is calibrated according to the Grayscale Standard Display Function (GSDF).

8.5 STANDARD EXTENDED/SPECIALIZED/PRIVATE SOP CLASSES

8.5.1 Ultrasound Image and Multi-frame Image SOP Classes

The US or US Multiframe Image Storage SOP Classes are extended to create a Standard Extended SOP Class by addition of standard and private attributes to the created SOP Instances as documented in section 8.1 as well as the standard attributes listed in Table 8.30.

Table 8.30
ULTRASOUND IMAGE EXTENDED ATTRIBUTES

Tag	Attribute Name	Added to
(0028,0030)	Pixel Spacing	Images with a single 2D region or dual 2D with same depth
(0008,0068)	Presentation Intent Type	Indicates that Pixel Data (7FE0,0010) contains 3D volume data
(0008,2112)	Source Image Sequence	Extended to use codes from CID 7205. See Table 8.31.

Pixel Spacing (0028,0030) is added to the exported DICOM file when the user has configured this attribute to be included and the image contains only one 2D calibration region and no Doppler or M-Mode calibration regions. This attribute is system generated, if used:

- **Contain the Pixel Spacing attribute:** 2D still, 2D loop, 2D color still, 2D color loop, MMode Preview Still, PW Preview Still, CW Preview still, Dual with same calibration on both images.
- **Do NOT contain the Pixel Spacing attribute:** MMode live trace, MMode frozen trace, PW live trace, PW Frozen trace, CW live trace, CW frozen trace, Reports and dual images with different calibration on each image.

Ultrasound Multi frame Image instances may be used to store 3D and 4D ultrasound volume information. The presence of the Presentation Intent Type (0008,0068) value "FOR PRESENTATION" indicates that Pixel Data (7FE0,0010) contains spatially related frames of a 3D volume rather than the normal temporally related frames. 3D Temporal (a.k.a. 4D) volume information is stored using private attributes within a normal Ultrasound Multi frame Image object.

The private attributes that are sent via network or media are dependent on settings for the specific destination, as found in "Print/Network>Device Selection and either the "Media" tab or "Archive" tab and the "Advanced" button for the highlighted archive device.

A APPENDIX A – Structured Reports

A.1 STRUCTURED REPORTS

A.1.1 Introduction

EPIQ implements Structured Report Templates TID 5000 (OB-GYN Ultrasound Procedure Report), TID 5100 (Vascular Ultrasound Report), TID 5200 (Echocardiography Procedure Report) and TID 5220 (Pediatric, Fetal and Congenital Cardiac Ultrasound Reports) from DICOM PS 3.16 and Private TID 995300 (Ped Echo) based on Supplement 78 version 2, May 8 2004. This Appendix describes the manner that EPIQ measurements appear in DICOM reports.

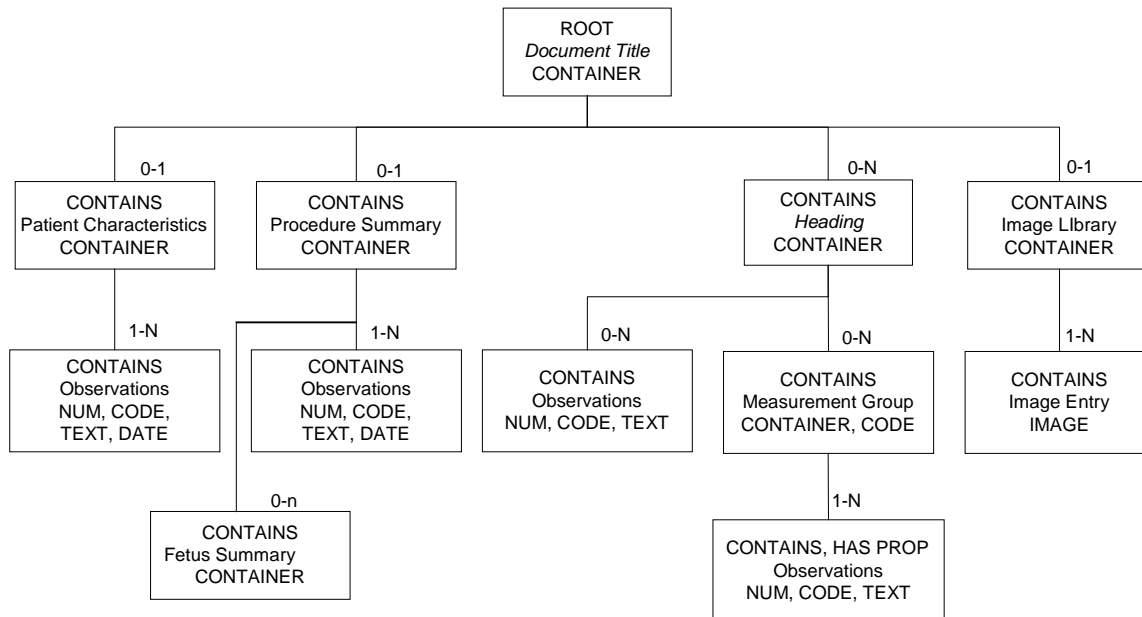

This Appendix contains tables of the measurement and calculations displayed on EPIQ calculation screens and the data dictionary of all code values, coding scheme designators and code meanings associated with those measurements and labels. There is no attempt to provide all tags that will be sent in the SR object. For those specifics, please refer to DICOM PS3.3, 3.16 and 3.17 for complete discussion on Comprehensive SR Storage SOP Class support and the Templates described here.

DICOM PS 3.17 of the DICOM Standard includes tree diagrams showing graphic examples of the structure of each template.

Briefly, an Structured Report (SR) document will contain only the measurements, calculations and observations made during the exam. Its exact structure is therefore determined by two main components, the measurements that are available within the context of the template and its referenced Templates and Context groups, and those measurements and calculations that are implemented on the system creating the report. Supplementing these constraints are private and user defined measurements and calculations, which may be added if the Root Container Template is extensible.

In EPIQ, the calculation packages contain a combination of template and user defined measurements and calculations. This Appendix contains a description of the calculation packages on each system and the related templates that support them. See the table in the Clinical Scope section below.

In each template section, there is a brief description of the mapping of measurement and calculation labels as they appear on EPIQ's Touch Screen buttons when the Analysis feature is enabled.

A.1.1.1 Measurements Linked to Images

Spatial Coordinates (as defined by TID 320 row 3) are included for measurement sub-results whose measurement tools have been captured in an image (as defined by TID 300 row 13).

There are three special cases in which the Value Multiplicity for DTID 320 shall be greater than one:

- a. If more than one image is captured of the same measurement tool, the sub-result will reference each image.
- b. For a complex measurement tool (the Simpson’s Method of Disk Volume measurement) which with one user action creates 22 unique spatial coordinates, the first 20 spatial coordinate shall be the Chord values, the 21st spatial coordinate shall be the ventricular length measurement, and the 22nd spatial coordinate shall be the ventricular area measurement.
- c. For Doppler velocity measurements made with a two-point or trace tool, there shall be two spatial coordinates per measurement. The first shall be the single point associated with the velocity measurement, and the second shall consist of all the points of the measurement tool.

A.1.2 Clinical Scope

The supported measurements are located in Calcs packages accessed with the “Measure” hard key on EPIQ. . Measurements for a given SR section may come from several calcs sidebars/touch screens.

A.2 APPLICATIONS THAT EXPORT STRUCTURED REPORTS FROM EPIQ

The following table illustrates the calculation packages that are on EPIQ, which will export Structured Reports when selecting the Change Calcs option.

Y = will export an SR, N = No SR Exported

Applications	Template ID	Notes
OB	TID 5000 Section A.4	
GYN	TID 5000 Section A.4	
Small Parts	N/A	Not supported
Fetal Echo	N/A	Not supported

Abdominal	TID 5100A.8 Section A.5	
TCD	TID 5100A.8 Section A.5	
Adult Echo	TID 5200 Section A.6	

See the appropriate Template Section for details on specific outputs from the system.

The mapping tables that follow illustrate the relationship between system calculation package labels as represented on the screen and on-system report displays and relate them to the associated code representations.

Each section, OB-GYN, Vascular, Echo and both Ped Echo begins with a table detailing the relationships of the mapping table contents to the Templates, and the specified Context groups.

The Patient Data Entry (PDE) and Study Info Mapping section describes the labels of the fields present in the user interface that will be sent with the Structured Report, and referenced template and date types.

A.4 TID 5000 OB-GYN ULTRASOUND PROCEDURE REPORT

The following tables present information used in Structured Reports for this template.

The tables are sorted by the Label value, which corresponds to the label displayed in the analysis application and reports displayed on the system.

All system measurements and calculations exported will be listed by alphabetically by Label Name. The table will include the actual Coding Scheme Designator, Code Value and Code Meaning used for that label.

A.5 TID 5100 VASCULAR ULTRASOUND PROCEDURE REPORT

The following tables present information used in Structured Reports for this template.

The tables are sorted by the Label value, which corresponds to the label displayed in the analysis application and reports displayed on the system.

All system measurements and calculations exported will be listed by alphabetically by Label Name. The table will include the actual Coding Scheme Designator, Code Value and Code Meaning used for that label.

In the table below, the following terms are used:

CSD	Coding Scheme Designator
CV	Code Value
CM	Code Meaning
Mod Type	Concept Modifier Type
Laterality	Describes laterality of vessel

“Mod Type” Field

Anatomy	The finding site as specified by the template
Concept	The code sequence as defined by the CSD
Section	The section as specified by the template
Segment	The name of the vessel segment
Units	Units of this measurement

A.6 TID 5200 ADULT ECHOCARDIOGRAPHY PROCEDURE REPORT

The following tables present information used in Structured Reports for this template.

The tables are sorted by the Label value, which corresponds to the label displayed in the analysis application and reports displayed on the system.

All system measurements and calculations exported will be listed by alphabetically by Label Name. The table will include the actual Coding Scheme Designator, Code Value and Code Meaning used for that label.

In the table below, the following terms are used:

CSD	Coding Scheme Designator
CV	Code Value
CM	Code Meaning
Mod Type	Concept Modifier Type

“Mod Type” Field

App	Application or SR Template this measurement or calculation applies to
Site	The finding site as specified by the template
Concept	The code sequence as defined by the CSD
Mode	The imaging mode used for this value
Direction	Regurgitant or antegrade flow
Method	Measurement or calculation method used
Target	Location
View	Cardiac Imaging View

A.7 TID 5220 PEDIATRIC, FETAL AND CONGENITAL CARDIAC ULTRASOUND REPORTS

The following tables present information used in Structured Reports for this template.

The tables are sorted by the Label value, which corresponds to the label displayed in the analysis application and reports displayed on the system.

All system measurements and calculations exported will be listed by alphabetically by Label Name. The table will include the actual Coding Scheme Designator, Code Value and Code Meaning used for that label.

In the table below, the following terms are used:

CSD	Coding Scheme Designator
CV	Code Value
CM	Code Meaning
Mod Type	Concept Modifier Type

“Mod Type” Field

Site	The finding site as specified by the template
Concept	The code sequence as defined by the CSD
Direction	Regurgitant or antegrade flow
Disk	Simpsons disk number
Target	Location
Mode	The imaging mode used for this value
Method	Measurement or Calculation method used
Phase	Cardiac Phase
View	Echocardiography Image View
Derivation	Calculation Method
Result	Result identifier

A.8 TID 995300 PEDIATRIC ECHO PROCEDURE REPORT (PRIVATE)

The following tables present information used in Structured Reports for this template.

The tables are sorted by the Label value, which corresponds to the label displayed in the analysis application and reports displayed on the system.

All system measurements and calculations exported will be listed by alphabetically by Label Name. The table will include the actual Coding Scheme Designator, Code Value and Code Meaning used for that label.

In the table below, the following terms are used:

CSD	Coding Scheme Designator
CV	Code Value
CM	Code Meaning
Mod Type	Concept Modifier Type

“Mod Type” Field

Site	The finding site as specified by the template
Concept	The code sequence as defined by the CSD
Direction	Regurgitant or antegrade flow
Disk	Simpsons disk number
Target	Location
Mode	The imaging mode used for this value
Method	Measurement or Calculation method used
Phase	Cardiac Phase
View	Echocardiography Image View
Derivation	Calculation Method
Result	Result identifier
Units	Units identifier

A.10 USER-DEFINED MEASUREMENTS AND CALCULATIONS

A.10.1 Description

In order to export all user-defined measurements and calculations, a generic structure was created that does not assign specific codes to the individual measurements, rather uses the label given by the user. This will allow all user-defined measurements to be treated in a uniform manner, without needing a per-site dictionary of user-defined codes.
