HSDPCPF-T-030001.09 (Rev C)   Corresponds to HSDPCPF-W-030001.02

Table of Contents

1. Introduction

This DICOM Conformance Statement annex is applicable for the MR-RT plug-in (also known as RTgo plug-in) which is optional MR software package for Philips MR systems.

MR-RT plugin enables MR-only simulation and auto-segmentation of specific treatment sites on the MR system. The plug-in creates synthetic CT images based on the input MR images as well as automatic segmentation for certain treatment sites. ROI contour information generated by the auto-segmentation algorithms is linked to the generated CT image set and these objects are used as an input for radiotherapy treatment planning. The CT images and RT Structure set objects can be DICOM exported out of the MR system to be imported to radiotherapy treatment planning system.

Note: Supported CT Image and RT Struct objects are exported by the MR-RT plug-in. Compared to the MR Image export there is only one difference: after establishing association with the SCP, plug-in sends C-ECHO command before initiating C-STORE sequence.

1.1.   Revision History

The revision history below provides dates and differences among individual document versions.

Table 1: Revision History

Document Version	Date of Issue	Status	Description
00	2019-AUG-19	Approved	Initial Version

1.2.   Definitions, Terms and Abbreviations

Abbreviation/Term	Explanation
CT	Computed Tomography
DICOM	Digital Imaging and Communications in Medicine
IOD	Information Object Definition
RT	Radiotherapy
UID	Unique Identifier
VR	Value Representation

2. Data Specifications

2.1. Supported IOD's

Supported CT Image and RT Struct objects can exported like the MR images. However during export, after establishing association with the Store SCP, RTgo plugin sends C-ECHO command before initiating C-STORE sequence.

This section specifies each IOD accepted and / or created by RTgo.

ACCEPTED   The applicable IOD is accepted for storage in the repository of the hosting platform and supported for import in RTgo for viewing and analysis.

CREATED   The RTgo supports generation of derived data by using the applicable IOD

Table 2: Supported IOD's

IOD		Support	
Name	**UID**	**ACCEPTED**	**CREATED**
CT Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.2	No	Yes
RT Structure Set Storage SOP Class	1.2.840.10008.5.1.4.1.1.481.3	No	Yes

2.1.1. Acceptance Criteria

Table 3: Created transfer syntaxes per IOD

IOD		Transfer Syntax	
Name	**UID**	**Name**	**UID**
CT Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.2	Explicit VR Little Endian Implicit VR Little Endian Explicit VR Big Endian	1.2.840.10008.1.2.1 1.2.840.10008.1.2 1.2.840.10008.1.2.2
RT Structure Set Storage SOP Class	1.2.840.10008.5.1.4.1.1.481.3	Explicit VR Little Endian Implicit VR Little Endian Explicit VR Big Endian	1.2.840.10008.1.2.1 1.2.840.10008.1.2 1.2.840.10008.1.2.2

2.1.2. Contents of Created IOD's

This section specifies the IOD created by this application and specifies the content for each IOD (including private IODs).
For each attribute in the IOD the following information is supplied:

- Attribute name
- Tag
- VR – Value representation
- Value - specifies possible values
- Presence of value - specifies if attribute is always present or only under specific conditions
- Source of value - specifies the source of the value
- Comment - gives additional information on the attribute

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS   The module is always present.

CONDITIONAL   The module is used under specified condition.

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS   The attribute is always present with a value

EMPTY   The attribute is always present without any value (attribute sent zero length)

VNAP   The attribute is always present and its Value is Not Always Present (attribute sent zero length if no value is present)

ANAP   The attribute is present under specified condition – if present then it will always have a value

The abbreviations used in the Module table for the column "Source" are:

AUTO   The attribute value is generated automatically

CONFIG   The attribute value source is a configurable parameter

COPY   The attribute value source is another SOP instance

FIXED   The attribute value is hard-coded in the application

IMPLICIT   The attribute value source is a user-implicit setting

MPPS   The attribute value is the same as that use for Modality Performed Procedure Step

MWL   The attribute value source is a Modality Worklist

USER   The attribute value source is explicit user input

2.1.2.1.   Implementation Identifying Information

The value supplied for Implementation Class UID and version name are specified in table 4.

Table 4: DICOM Implementation Class and Version for Created Instances

Implementation Class UID	1.3.46.670589.11.0.0.51.4.56.1
Implementation Version Name	Philips MR 56.1

Note: The Implementation Class and Implementation Version for RTgo Plug-in DICOM export refers to different DICOM library and are therefore has different identification compared to the standard system.

Table 5: List of created SOP Classes

SOP Class Name	SOP Class UID
CT Image Storage	1.2.840.10008.5.1.4.1.1.2
RT Structure Set Storage SOP Class	1.2.840.10008.5.1.4.1.1.481.3

2.1.2.2. CT Image Storage SOP Class

2.1.3. Security Profiles

2.1.3.1. Attribute Confidentiality Profiles

Calypso RTgo 4.0 displays similar behaviour of the Basic Application Level Confidentiality Profile (as a de-identifier without encryption) as defined by the hosting MR System.For further detail refer DICOM Conformance Statement of MR Systems (Document Id: ICAP-PF.0035949).

2.1.3.2. Application Level Security

The RTgo 4.0 plugin allows the use of either a conventional (non-secure) DICOM communication or a secure DICOM communication based on the Transport Layer Security (TLS) protocol [TLS 1.2].
